Chapter 1

Maintenance

Cash Management Maintenance Functions

The most important control information of any module is the company profile. Cash Management supports multiple companies, and each company must have a company profile. Each company profile holds the rules that govern the operation of Cash Management.

This section describes how you create and maintain a company profile in Cash Management, and how to set up the basic data necessary to operate the module.

Set up options as follows:

- Set up the company profile (screens 1 and 2).
- Set up the names and addresses of all the banks your company uses. (This must be done before entering the bank account numbers themselves in the company profile - screen 3.)
- Any suppliers who are not defined to Accounts Payable must be defined in Cash Management as miscellaneous creditors so that journal or manual payments can be made to them.
- Set up Reason codes in CS Parameters. To use (for example, in writing off unpaid collection documents)
- Set up other parameters such as the payment class PCLS. Payment methods are an extensively used feature of Cash Management and Accounts Payable, and should be set up with some care, as should any extended terms definitions, which govern the payment of invoices received by Accounts Payable.
- In the Bank Accounts maintenance option create cash apportionment tables. These enable you to divide received cash between bank accounts in order to benefit from different interest rates, etc. The External Bank Details option is used if your bank needs notifying of a customer's bank details - for example, to collect on a matured document.
- Use the Interest and Commission Charges option to apply expected bank charges to your accounts before receiving your statement, thus keeping the accounts up to date.
- Register cheque numbers (two options available), particularly where a cheque is missing or out of sequence.
- Define schedules of settlement discounts for documents at the Discount Codes option.

Each maintenance option has a corresponding reports option which will provide you with a print out of the data entered.

Company Profiles

/ASCO

This section describes how to create or maintain the CS company profile.

Warning: First, you must ensure that your General Ledger is installed, with a complete chart of accounts. Each Cash Management company must have a corresponding company profile in the General Ledger.

Note: You cannot maintain a company profile when other users are using the module.

Warning: You should avoid changing existing company profiles once the application is in use, as this may corrupt your data. If a change is essential it must be strictly controlled.

Select the financial systems company profile option *Cash Management*. At the selection screen enter a company code for a new or existing company. Press **Enter** to see the first Maintain Cash Mgmt Company Profile screen.

Maintain Cash Mgmt Company Profile Screen

1

Select a company for the company profile and
Enter to display the first selection screen.

Enter your GL accounts and other posting options for cash management.

Fields:

Company Description

If this is a new company being set up, you must enter a company description.

The existing description will be displayed for any existing company.

General Ledger Company

Enter the two-character code of the General Ledger company with which this company is linked.

Note: If you are in a multi-company environment, you must ensure that any Accounts Receivable or Accounts Payable companies linking to this company link to the same General Ledger.

Multi-Currency Posting

1 - Bank accounts can be held in any currency.

0 - Bank accounts can be held in base currency only.

If this company is linked to multi-currency Accounts Payable or Accounts Receivable, payments may be made or received in any currency. Cash journals in this module may be made in base currency only.

Currency Rate Code

For multi-currency Cash Management, you may enter the default rate code to be used to convert prime into base.

Currency Trading Account

Enter the default General Ledger account code. This must be a valid account code set up in the General Ledger company specified above, and may be changed at any time

Default Charge Account

Enter the default General Ledger account code for bank charges. This must be a valid account code set up in the General Ledger company specified above, and may be changed at any time.

Default Bank Account

Enter the default General Ledger account code. This must be a valid account code set up in the General Ledger company specified above. It may be changed at any time.

*Note: During initial set up use **F4=Prompt**, then **F15=Display Accounts Eligible..** (to become bank accounts).*

Cash Management Reference

The module will allocate a reference number to all Cash Management transactions. Set this field to a suitable starting point and the system will number sequentially from here.

Petty Cash Reference

The module will allocate a reference number to any transaction involving a bank account defined as a petty cash account. Enter a suitable starting number.

Payment Run Number

Payments made via Cash Management are from a sequential run number.

Enter the next number to be allocated.

Print Output Library/Queue

Enter the name of the output queue to which reports are to be sent, and the library in which it resides.

Cheque Output Library/Queue

Enter the name of the output queue to which cheques and remittances are to be sent, and the library in which it resides.

A/P Cheque Sequence

The value entered here controls the sequence in which cheques are printed in Accounts Payable:

- 1 - By ascending value
- 2 - In supplier alpha code sequence
- 3 - In supplier code sequence
- 4 - In post code sequence

- 5 - In supplier group 1 sequence
- 6 - In supplier group 2 sequence
- 7 - In supplier group 3 sequence
- 8 - In supplier group 4 sequence.

Country Code

Enter here the country code to act as the default code for Cash Management bank account details.

This field does not affect the financial workings of the system; this is done by the country code of the General Ledger company profile in conjunction with the country-specific parameters in the General Ledger utilities.

The code is not related to language or currency codes.

Default Payment Method

Payment methods are user-defined within the Cash Management module. Any number of methods may be defined, although each will be of one of the following types:

- Cheque
- Transfer
- Electronic
- Collection Documents
- Cash
- Credit card
- EDI

Additional Bank Details

If you wish to specify additional bank details to this company profile, enter 1 here.

Collection Documents Req'd

- 1 - You wish to be able to post collection documents to this company.

Press **Enter** when you have completed these fields. A series of extension code windows will be displayed, each window corresponding to an account code you have entered on the screen. You may change the default extension codes given, or press **Enter** to accept them.

Maintain Company Profile Screen 2

Enter 1 in the Collection Documents Req'd field in Maintain Cash Mgmt Company Profile to display Screen 2.

This screen enables you to enter collection document details.

Fields:

Next Bank Session Number

Collection documents are sent to the bank in batches known as sessions. Enter the number at which the automatic session numbering system is to begin.

Next Document Ref

Each collection document has a unique internal reference number. Enter the number at which the numbering system is to begin.

Next Journal Number

This field is for future development.

Document Payable Account

Enter the GL account to which the value of the document will be credited once the document is created.

Document Receivable Account

Enter the GL account that will hold the balance of documents accepted but not yet sent to the bank.

Sold To Bank Acct

Enter the GL account to be used to show the balance of documents sold to the bank. The account will be downdated when the document matures.

Sent To Bank Acct

Enter the GL account to be used to show the balance of documents sent to the bank. The account will be downdated when the document matures.

Unpaid Documents Acct

Enter the account to be used if a document is not paid.

The balance on the account will reflect the total value of unpaid documents. It will be downdated following the use of the Manage Unpays option.

Item Types For Auto Create

If collection documents are to be created automatically by the system, enter the item types to be included for creation.

Summarise G/L Postings

1 - Summarise GL postings.

0 - Keep each posting separate. This provides a more detailed audit trail.

Cash Apportionment

1 - Cash from collection documents can be apportioned to different banks. In this case, no credit checking will be done when selling to the bank.

The way in which you wish to apportion cash is specified in the Cash Apportionment Table option.

Document Write Off Limit

This field is for future development.

Minimum Document Value

Enter the minimum amount for which a collection document may be created.

Document Creation Days

Enter the number of days before the invoice due date that collection documents are to be created.

Send To Bank Days

Enter the number of days before maturity that collection documents are to be sent to the bank.

Caution Days

Enter the number of days between maturity and confirmation.

Unpaid Reason Code

If you are using third party documents (where a customer settles a debt by passing on a third party's collection document - mainly used in Italy), the system keeps a count of the following:

- recalled documents (documents which are unpaid but not through the customer's fault)
- unpaid Cambiale documents (Italian collection documents)
- unpaid Riba documents (Italian direct debits)

Third party documents have a standard reason code set up. If the code you enter here is the same as this standard one, the 'recalled documents' counter will be increased by 1.

Otherwise, the counter (Cambiale or Riba) will be determined from the setting of the unpaid counter type on the payment method of the unpaid document.

Complete the fields and press **Enter**. A series of extension code windows display. Each window corresponds to an account code you have entered on the screen. You may change the default extension codes given, or simply press **Enter** to accept them.

Press **Enter** on the final extension code window to return to the company selection screen. Your updates are completed.

Bank Accounts

1/CSM

This option enables you to define the parameters of each bank account to be used in this module. Once you have defined an account as a bank account, postings can take place only within Cash Management.

Note: Before defining this account, you must first take the Bank Names and Addresses option and enter the name and address of the bank branch concerned.

Select the *Bank Accounts* option then enter the bank account code for which you want to enter or maintain bank details. Any account you enter must have been previously set up in the General Ledger. Press **Enter** to see the Maintain Bank Accounts screen.

Fields:

Bank Account Name

The name of the account as it is known to the bank.

Bank Account Desc

Any additional account information. May include the account number.

Bank

This code refers to the bank in which the account is held. This code must have been previously set up in Cash Management, using the Names and Addresses option.

Bank Account Type

Enter a valid account type which has been set up in the parameter file.

Cheque Type

Enter a valid cheque type which has been set up in the parameter file.

Cheque Form

Enter a valid cheque form code which has been set up in the parameter file.

Interest Rate

Enter an interest rate, if one is to be applied to the account. This is a reference field only, and the rate entered will not be used in calculations.

Overdraft Limit

Enter an overdraft limit, if one is to be applied to the account. This is a reference field only, and the figure entered will not be used in calculations.

Suspense Account

Enter a General Ledger account which will act as a suspense account for this bank account.

If this field is left blank, then any suspended transactions will be posted to the bank account itself.

Auto Suspension

1 - Suspend all postings to this bank account.

Charge Account

Enter a General Ledger account code to which bank charges will be debited.

Cash Apportionment

1 - Cash apportionment is to be used for this bank account.

Press **F11=Delete** to delete an account, or press **Enter** to continue to the Maintain Bank Accounts screen, which asks for collection document processing details.

Maintain Bank Accounts Detail Screen

This screen is displayed when you press **Enter** in the Maintain Bank Accounts initial screen.

This screen enables you to enter collection document processing details.

9-32	SA	MW	KS CL IM DM II STUD140 KB PET310S1

Fields:

Documents Payable

Enter the account to be credited when a collection document is created.

Documents Receivable

Enter the account to be debited when a collection document is accepted.

Sent To Bank

Enter the account to be debited when the collection document is sent to the bank to mature.

Sold To Bank

When collection documents are sold to the bank, the document receivable account is credited and the bank account is debited, while the sales suspense account is debited. Enter here the account to be debited when the sales suspense account is credited.

Unpaid

If a collection document is not paid on maturity, credit whichever account the document is currently in, and debit the account defined here as the unpaid documents account.

Interest

Enter the account to hold interest charges.

Sales Suspense

When collection documents are sold to the bank, the document receivable account is credited and the bank account is debited, while the sales suspense account is debited. Enter here the sales suspense account.

Charges VAT Code

Bank charges incurred when sending a document to bank are recorded against a VAT code. Enter that code here.

Commission VAT Code

Bank commission charges incurred when sending a document to bank are recorded against a VAT code. Enter that code here.

Maximum Bill Value

This field is for future development.

Maximum Session Value

This field is for future development.

Sold Documents Credit Limit

The bank may refuse to buy documents whose total value is over a certain limit. Enter that limit here.

If the Cash Apportionment field on the previous screen is set to 0 and you try to sell documents of too great a value, a warning will be displayed.

Bank Charges Per Document

1 - Record bank charges against individual documents.

0 or blank - Record charges against a session. In this case, you simply enter the charges total for a session against that session. The system will then apportion the total value across each document in the session on the basis of document value.

Press **Enter** as the extension codes of the different accounts are displayed for maintenance, then press **F8=Update** to update.
If no bank suspense account is used press **F8=Update** to remove the error message querying the lack of a suspense account.

Bank Names and Addresses

1...
2...

2/CSM

Before a bank account can be defined, it is necessary to create a record of the bank at which the account is held. This option enables you to do this.

More than one bank account may be held at a single bank.

Select the *Bank Names and Addresses* option and on the selection screen enter the relevant bank code.

Press **Enter** to see the Maintain Bank Name and Address screen. If the branch is being defined for the first time the maintenance fields will be empty, but if you are maintaining a branch which already exists the current details display.

Enter the code for the bank.

Bank Name

Enter the name of the bank.

Bank Address

Five entry fields are provided to enable you to enter the full postal address of the branch of the bank specified.

Post Code

Enter the post code of the branch.

Country Code

Enter the appropriate country code for the country of the bank.

Management

The entry in this field will determine the format of the bank details window displayed when maintaining bank accounts in cash.

Press **F11=Delete** to delete a bank's name and address details, or press **Enter** to update.

Parameters

1... 2... 3/CSM

This option enables you to create and maintain the parameters used by Cash Management.

Two types of parameters exist in this option:

- System created. Delivered with the system with sub-codes which are required for standard operation of the module. You may only change the description and will be unable to delete the parameter.
- User created. You add this parameter with a description and sub-codes. Sub-codes are then available for operation of the module or selection by your users. Once created, user created parameters can contain system pre-defined sub-codes.

Select the Cash Management maintenance *Parameters* option to display the first screen of CS parameters.

Note: Parameters are listed in the alphabetic order of the parameter type code.

Fields:

Select

2 - Maintain a parameter. The code, description and other details will display at the bottom of the screen under Maintain Type.

Note: Only the description may be changed on system defined parameters.

Make your amendments and press **Enter** to update the display.

4 - Delete a parameter.

Note: You may not delete system-defined parameters.

5 - Maintain a sub-type. A screen displays with a list of the sub-types defined to the selected parameter. You may then select sub-types for amendment or deletion. At the bottom of the screen add new types.

Note: System-defined sub-types may not be deleted although you can change the description.

Src.

The source of the parameter.

User - The parameter was user-created.

Sys - The parameter was system-defined.

Type

The parameter types available in Cash Management are as follows:

*Note: * Types. An asterisk is used here for Collection Document Parameter Codes.*

See Parameter Types List for more information.

New Type

Enter the 4-character code of the new CS parameter type to be defined.

Unnamed (New Description)

Add a description for the parameter.

Sequence Required

0 - The sub-types for the parameter can not be sequenced for reporting purposes. The field defaults to 0.

1 - The sub-types for this parameter can be sequenced for reporting purposes.

G/L Code Required

1 - You want a General Ledger account code to be defined for each sub-type for this parameter.

Code Length

Enter the length of the sub-type code, up to 10 characters.

Make your amendments and press **Enter** to update the display.

Parameter File Maintenance (Option 5)

Enter 5 against a parameter on the first Parameter File Maintenance screen to display the sub-types defined.

This screen displays codes set up for the main parameter type. System codes are created by the system and you may only amend the description. User codes are created by you and may be amended when required.

If you are amending a sub-type, you can amend the description here.

Press **Enter** to validate the entry and then exit

the option with **F3=Exit**.

CS Parameters Types List

The list of CS parameters are listed in alphabetic order.

*BKGP

Bank Group. Add sub-codes to identify bank groups. At the Italian Bank Window you would then add the bank group code. Bank Details windows display at Customer and Supplier Maintenance options.

Note: This item is normally used in Italy.

Example User Sub-codes: CEN Central, PRV Provincial

*BOET

Bill of Exchange Type. The system pre-defines collection documents as sub-types: 0 LCC, 1 LCR, 2 BOR to identify Accounts Payable collection document transaction types.

BRCD

Tape Format Records. Add sub-types for the tape format records which you wish to be excluded when loading the tape at the Automatic Bank Reconciliation option.

BTYP

Bank Type. Bank account types are pre-defined by the system as CAL Overnight call account, CUR Current account, FAC Short term facility, OD Overdraft account and P/C Petty Cash account. You may add sub-codes for your alternative bank types.

Bank types are applied at Bank Accounts Maintenance and may be used as selection criteria in the Statement of Balances and Daily Movement reports.

*CDDO

Collection Document Discount Override. No longer used.

CFMT

Cheque format. One system defined cheque form type of CF Default Cheque Form is included. Add your own form types for each cheque stationery type used.

Cheque form types are assigned to individual banks at the Bank Accounts Maintenance option.

CLRD

Cleared Date Entry. This parameter is linked to sub-codes in parameter BTYP. Add bank types (which are already set up in BTYP) to take effect at the Bank Statement Reconciliation option.

For the bank types included here a cleared date (rather than a global statement date) may be entered against the items cleared.

CTYP

Cheque Type. The system pre-defines cheque and remittance output types of C Combined Cheque & Remittance, I Separate cheque & remittance, R Remittance only. Add your own additional cheque & remittance output types where required.

Cheque output types are assigned to individual bank accounts at Bank Accounts Maintenance. This will define the output format of print file(s) created for payments made from the bank account.

*DRDB

Direct Debit Methods. Add payment methods as sub-codes to be added to the Collection Documents Direct Debit Creation option. This will allow a GL Posting distinction between direct debits and collection documents.

For example: 1. At CS Payment Method Maintenance option set up payment method DDM to be used for direct debit payments. 2. Add DDM as a sub-code here. 3. At CS Direct Debit Creation (43/CSD) create a direct debit with selected DDM payment types.

EBDR

EDI Without Bank Details. For suppliers who make payments by EDI the system will normally require the suppliers bank account details. However, payment advice and remittance details received via EDI may not include bank details. To allow for this you must add a sub-code which would also be defined as a separate payment method.

Note: EDI Payment Methods are defined with a Payment Type of 7 at Payment Methods Maintenance in Cash Management.

ETYP

Item Type. The system pre-defines transaction types to be used for processing throughout your Cash Management module as sub-codes CC Cash, CD Collection Document, CG Charges Value, CX Cancelled Cash, JP Journal Payment etc.

OCRC

Cheque Reason Code. The system pre-defines sub-codes as 01 Processed Cheque, 02 Skipped cheque, 99 Cancelled Cheque. You may create additional sub-codes as reason codes for cheque numbers.

Reasons are then selected at the Omitted Cheques Maintenance and Cheque Register Report options. This ensures that all cheque numbers, whether used or spoilt are accounted for.

*OMDT

Override Maturity Dates. Set up sub-codes as payment methods which will allow your users to override the maturity date of accounts payable collection documents. The maturity date would be overridden in the Payments option at the Release Outstanding Supplier Payments option.

PCDE

PL Payment Code. No longer used.

*PCLS

Payment Class. Add sub-codes to group similar types of payment methods for collection documents.

Payment classes are then used at document creation sessions and when sending cash collection letters.

*PDUS

Review Code. You may add codes for collection documents which will require review.

Review codes will be used at the Collection Documents Manual Creation option where documents may be assigned a code for review at a later stage.

Note: It is recommended that you read the sub-section Using Review Codes under the section The Collection Document Cycle.

PMTH

Payment Method. No longer used.

RCOD

Reason Code. The system pre-defines the sub-code CV Currency Variance which is used during the processing of multicurrency transactions where exchange rate variances occur.

You may create additional reason codes, linked to appropriate GL accounts which will be used during the entry of cash transactions, journal receipts or payments for the purpose of directing postings to the correct GL accounts.

RTYP

Report Type. No longer used.

SRCE

Transaction Source. The system pre-defines sub-codes G General Ledger, S Accounts Receivable and C Cash Management to identify the transaction source.

Transaction source codes may be used as selection criteria to limit output in the Currency by Bank Account Report.

SSBK

Bank Status. The system pre-defines the sub-codes C Confirmed, P Provisional or S Suspended to indicate the status of each transaction held against a bank account.

SSPO

Posted Status. The system pre-defines the sub-codes C Confirmed, H Held, S Suspended, T To be posted and X Cancelled to indicate the posting status of Cash Management transactions.

*TSTS

Document Status. The system pre-defines sub-codes to report the status of collection documents. For example 02 Statement, 05 Unaccepted, 10 Accepted, 15 Disputed, 25 In Session, 30 Sent to Bank, 32 Sold to Bank, 39 Unpaid.

TSUB

Type / Sub-type. No longer used.

*UBRC

Bill Reason Code. No longer used.

UNAL

Unallocated Cash Codes. No longer used.

*UPRC

Unpaid Reason Code. You may add sub-codes as reasons for collection documents being unpaid. Used to identify and manage unpaid collection documents.

*Note: * Asterisk before the Type shows collection document parameter codes.*

Period End Calendar

4/CSM

The period end calendar holds the period end date for each ledger period. It is used in the period end procedures, and to validate some reporting parameters. The calendar must be set up to complete the period end routine.

Select the *Period End Calendar* option, and enter the period (YYPP) for which you want to define an opening date on the selection screen.

Fields:

Date Opened

Enter the start date for the period (format DDMMYY).

Press **Enter** and a Date Opened field will display below the period field.

Miscellaneous Creditors

**5/CSM**

Any suppliers not defined to Accounts Payable as suppliers can be defined as creditors here to enable payments to be made. It is easier to process one-off payments via this option as the miscellaneous creditor account can be deleted afterwards.

Select the maintenance option *Miscellaneous Creditors*. Enter the creditor on the selection screen and press **Enter** to see the Maintain Miscellaneous Creditors Screen.

Extended Terms

6/CSM

This option provides you with a very flexible method of making a payment by instalments. This is used by Accounts Receivable and Accounts Payable Modules. Holidays and weekends may be considered in the calculation.

Note: The GL Country Specific Parameters Due Date Exclude Weekends/Holidays (23-24) must be set up.

A three-character extended terms code is entered, and it is this which holds the details of how the payments are to be made. Each instalment has its own payment terms defined, and can be any proportion of the total invoice, and can be paid using any defined payment method.

Select the *Extended Terms* option to display the following fields.

Fields:

Receivables / Payables Company

Enter the company for which extended terms are to be defined. This field defaults to the current company.

Extended Terms

Enter the code which identifies the extended terms you are about to define or amend.

Range Terms

0 - Default. Enables you to set up extended terms.

1 - Set up predetermined due dates for invoices which fall within a range of dates. You can split 31 days into different ranges of dates.

When these fields are completed, press **Enter** to see the maintenance screen.

Maintain Extended Terms

Add details and press **Enter** at the first Extended Terms screen to display this screen.

Set up details of your extended payment terms.

06-41 SF MW KS IM II KENB20A PET16SS2					

Fields:

Minimum Invoice Value

An invoice for a particularly small amount may not be worth paying by instalment. Any invoice total which is less than the amount entered here will be paid in a single payment on the date of the first instalment.

Spread Control

Enter the total of all the spread factors here, and a message will warn you of any discrepancy between this total and the actual total of spread factors entered. For example enter 100 if the spread factors are entered as percentages.

When you have entered the individual factors, a message will inform you if they do not add up to the total entered

Terms

This field is split into three smaller fields which together define the payment terms of each instalment.

First field

This contains a single character code which defines the type of terms to be used. The following codes are valid:

D - Number of days from invoice date.

M - Number of months before payment.

P - Periodic range.

Second field (for Periodic Range)

The second field is used with the code P to indicate your periodic range. You are, in effect, redefining the period in which due dates are to be calculated.

Example: Periodic Range

Terms	Payment Method	Spread Factor
P 2019 106	DD	

This example can be explained as:

P = Periodic payments

20 = the first day of your redefined period

19 = the last day of your redefined period

1 = add one month to the end of the redefined period

06 = make the due date fall on the 6th of the added month.

This table shows 4 example invoices (using the example terms) with calculated due dates.

Invoice Date	Invoice is in the redefined current period:	Due Date (Add 1 calendar month to the end of the redefined current period)
13.05.98	20.04.98 -19.05.98	06.06.98
20.05.98	20.05.98 -19.06.98	06.07.98
19.06.98	20.05.98 - 19.06.98	06.07.98
20.06.98	20.06.98 - 19.07.98	06.08.98

Third field (Payment date)

Depends on what is entered in the first field:

If D this holds the number of days in the format DDD.

If P or M holds the month and the date in the format MDD.

Examples:

A code of D ____ 030 means that the payment date is 30 days from the invoice date.

A code of M ____ 210 means a payment will be made on the 10th of the second month after the month in which the invoice was sent.

See also periodic range example.

Payment Method

Enter or select the payment method code.

Spread Factor

Enter the proportion of the total which is to be paid by each specific instalment on the invoice. In the example screen 50% of the invoice and the VAT should be paid in 30 days and 50% within 60 days of the invoice date.

VAT Payment Method

Enter the method by which the VAT on the invoice is to be paid.

VAT Terms

These three fields define the terms of the VAT payment.

First field

The first field contains a single character code which defines the type of terms to be used. The following codes are valid:

D - Number of days from invoice date.

M - Number of months before payment

P - Periodic range.

For further explanation see the field Terms above.

Functions:

F14

Fixed days. Select this option if you wish payments to be made on specific dates in the month. Due dates will be rounded up to the next fixed date available.

In our example payment days will always be rounded up to the 5th, 15th or 25th of the current or next month. So that an invoice dated 02.04.96 would be given a payment due date of 05.05.96.

When you have defined the terms to your satisfaction press **F8=Update** to update. Press **F11=Delete** to delete an extended terms definition.

Maintain Extended Terms with Range

If the Range Terms field was at 1 on the selection screen, this screen displays. Enter 1 in the Range Terms field on the selection screen to display the Maintain Extended Terms screen.

Set up predetermined due dates for invoices which fall within a range of dates. You can split 31 days into different ranges of dates.

F3=Exit F8=Update F11=Delete F12=Previous			
15-10 SF MW KS IM II KENB20A PET16SS2			

Fields:

Inv. Day -

Enter a 'from' date and a 'to' date.

1st Example: 1 06 means that invoices dated between the 1st and 6th (of any month) will be selected.

2nd Example: 7 15 means that invoices dated between the 7th and 15th (of any month) will be selected.

Due Date

The first field here holds an 'advance by number of months' value, and the second a pre-set due date.

1st Example: 2 12 means that if the invoice falls within the range of dates set up under 'Inv. day' then advance by 2 months (so if the invoice month is May, the due month will be July) and make the due date the 12th.

2nd Example: 2 25 means that if an invoice is dated 10th April it will have a due date of 25th June.

Press **F8=Update** to update. Press **F11=Delete** to delete an extended terms definition.

Payment Methods

1... 2... 7/CSM

This option enables you to define your own payment methods to Cash Management. Any number of methods may be defined, but each must be one of seven types:

- 1 - Cheque
- 2 - Transfer
- 3 - Electronic
- 4 - Collection document
- 5 - Cash
- 6 - Credit card
- 7 - EDI

Some of the fields available are relevant only to defining different types of collection document.

Select the Payment Method option, enter the payment method to define or amend on the selection screen, and press **Enter**. The Payment Method Maintenance Screen displays.

22-54	SA	YW	KS CL IM DM II EDN400A KB PKH312S1

The payment method entered at the first screen displays at the top of the details screen.

Fields:

Description

Enter your description for this payment method.

Payment Class

Enter the payment class to which the payment method is to belong. The payment class is used to select the collection documents for a new bank session.

Note: The payment class must already be defined to the PCLS parameter on the Cash Management parameters file.

Max. Items On Document

If you wish to restrict the number of items (invoices) to be paid on a single collection document, enter the maximum number of items to be allowed.

This is relevant to automatically created documents only, NOT to manually created ones.

Include In Auto-Create

1 - Collection documents of this type are to be created automatically by the Accounts Receivable auto-create routine.

0 - Documents are always to be created manually.

Statement Only

Relevant to Accounts Receivable collection documents only.

1 - Statements are to be printed without creating a collection document.

0 - Statements are to be printed and should create a collection document.

Note: This field can be set to 1 only if the Acceptance Method field is set to 1.

Acceptance Method

Relevant to Accounts Receivable collection documents only.

0 - Manual - This means that the customer is to review the documents before accepting them.

1 - Creation - The document is sent by the customer, and so will be flagged as accepted as soon as it is entered on the system.

2 - None - The document is created and processed without any formal acceptance from the customer at all, there being an agreement to this effect between you and the customer.

Print Required

0 - Collection documents can collect or send payments electronically, without the need for a printed copy.

1 - Produce a printed copy of collection documents

Sale Value

1 - The early sale of a collection document at a discount price is to be allowed.

Usage

Specify where this payment method is to be used:

1 - Accounts Receivable only.

2 - Accounts Payable only.

3 - Both.

The system will prevent you using a method in an unspecified module.

Medium

This field indicates which method is to be used to send payment details to the bank:

1 - Details to be sent on paper.

2 - Details to be sent on tape.

3 - Details to be sent electronically.

Payment type

Enter the correct payment type for the payment method you are creating:

1 - Cheque

2 - Transfer

3 - Electronic

4 - Collection document

5 - Cash

6 - Credit Card

7 - EDI

Note: Payment types can be grouped by entering a code in the Payment Class field on this screen.

Unpaid Counter Type

This field is relevant only for Italian companies.

1 - Cambiale

2 - Riba

If you are using third party documents (where a customer settles a debt by passing on a third party's collection document - (mainly used in Italy), the system keeps a count of the following:

- recalled documents (documents which are unpaid but not through the customer's fault)
- unpaid Cambiale documents (Italian collection documents)
- unpaid Riba documents (Italian direct debits)

The setting here determines whether this payment method is Cambiale or Riba.

Max Document Value

Enter any maximum value as required.

Consolidation Method

0 - Create one payment within Accounts Payable for each payable item irrespective of the supplier balance.

1 - Create a separate payment for each due date with items outstanding.

2 - Create one payment for all items up to the cut off date for the payment cycle.

3 - Create one payment within Accounts Payable for each item where the outstanding supplier balance is more than zero.

Collection Document

1 - If this payment method is for Accounts Payable collection documents, the payment cycle will create a payment with a code of CD.

Press **Enter** to validate your entries and
F8=Update to update the payment method.

Cash Apportionment Table

8/CSM

When cash is received into the system it is useful to be able to divide it into different bank accounts, so that a proportion of the money can be earning a high interest rate, for example, while the balance is kept in an easy-access account.

This option enables you to apportion cash according to its payment method.

Select the *Cash Apportionment Table* option and enter the payment class for which you want to set up a cash apportionment table. Press **Enter** and the Maintain Cash Apportionment Table screen displays.

CS340	E1 - Demonstration Company	User ED3	6/07/94 15:03:55

_____	_____		
F3=Exit F4=Prompt F8=Update F11=Delete F12=Previous			

Fields:

Minimum Apportionment Value

If the total value of a session is less than the value entered here, it will not be apportioned to different bank accounts, but will instead be sent to the low value bank account specified.

Low Value Bank Account

Specify here the bank account to which any low value session will be sent.

Maximum Document Value

Single documents with a value above this value will not be apportioned, but sent in session to the high value bank account.

High Value Bank Account

Specify here the bank account to which high value documents will be sent.

Bank

Enter the General Ledger bank account number.

Apportionment

Enter the percentage of the whole session value which you want to be sent to this bank account.

Press **F8=Update** to update. Press **F11=Delete** to delete a cash apportionment table.

External Bank Details

9/CSM

It is often necessary, when cashing collection documents or other documents, to tell your bank where to collect the money. If your customers and suppliers use a range of bank accounts, a record of these accounts will help you to specify which account is to be used.

This option enables you to maintain such a record.

Select the *External Bank Details* option to see the External Bank Account Maintenance screen.

```

Interest and Commission Charges

10/CSM

This option enables a bank charges - in this instance, for cashing collection documents - to be handled. You may be charged a certain fee for each document banked, and a specified amount for any unpaid document. If you sell a document to the bank before it matures, the amount of money you receive depends on the date of maturity.

This option enables you to enter these charges on the system, so that the charges incurred each session can be calculated automatically.

Select the *Interest & Commission Charges* option to display the following fields:

Fields:

Bank Account

Enter the bank account to which the charges are to be applied.

Payment Method

Certain documents may be charged differently to others. Enter the payment method to which these charges refer.

Effectivity Date

Enter the date on which these charges come into effect.

When you have completed the above fields press **Enter** to display a screen similar to the Maintain Interest & Commission Charges Screen.

Rate %

Enter the rate to be charged on the value of the document.

Note: The rate of interest charged depends on the number of days to maturity. No grading of the rate is possible here. If the charging policy of your bank cannot be fully represented here, you may prefer to enter your bank charges separately when each session is run.

Press **F8=Update** to update. Press **F20=Update & Resequence** to update and resequence.

Cheque Sequences

11/CSM

This option enables you to define to the system all the cheque numbers in use. You assign a batch number to a sequence of cheques, and this number is unique for the bank account.

Cheque numbers assigned to payments will now be validated against these batches. An option to archive

The use of cheque sequences is optional.

Select the *Cheque Sequences* option to see the following fields:

Fields:

Bank Account

Enter an existing bank account.

Batch Number

Enter the number of the batch to be maintained.

The batch number is used to reference a block of cheque numbers which are in use or which have been used. The batch number is unique for the bank account.

Press **Enter** to go to the Maintain Cheque Sequence Details Screen.

Maintain Cheque Sequence Details Screen

This screen is displayed when entered the details in the Cheque Sequences initial screen and pressed **Enter**.

At this screen, enter the cheque source (from AP or CS) and display the details of the cheque run.

CS025	E1 - Demonstration Company	User ED3	6/07/94 15:18:35
Maintain cheque sequences			
Bank account	512100	BARLOWS - GBP CURRENT ACCOUNT

Calculation basis 1 (0=Days,1=Periods)

Lead days 3

F3=Exit F8=Update F11=Delete F12=Previous

9-28 * KS CL IM DM II MARVIN KB PKH312S1

Fields:

Days Or Periods

Enter either:

The number of days to be added to the document date in order to calculate the discount date.

The discount date, in month / date form. This method works in the same way as the third 'payment terms' field, meaning that the first digit is the number of months after the document date, while the second and third digits form the date in that month. Thus for a invoice with a document date of 3/10/94, an entry here of 125 would mean a discount date of 25/11/94. This field depends on the setting of the 'calculation basis' field.

Disc %

Enter the percentage discount to be allowed for payment within the corresponding discount date.

Description

Enter a description for the settlement discount code.

Calculation Basis

0 - The calculation of the discount date is to be based on days.

1 - The calculation of the discount date is to be based on periods / months.

Days Lead

Enter the number of days between the production of a payment and its receipt by your supplier, if you want this to be taken into account when calculating discount and due dates.

This field is optional.

This value is used only for Accounts Payable payments.

Press **F8=Update** to update.

Press **F11=Delete** to delete the discount code.

Maintenance Reports

The Maintenance menu is made up of two columns of options.

The options on the right are the reporting options, which enable you to print listings of your maintenance data. These options are explained in the following sections.

Bank Accounts Report

31/CSM

Select the *Bank Accounts* option to produce a report listing all the bank accounts defined to Cash Management in full detail and in alphabetical order.

No screen will be displayed as no parameters are required. Simply press the option number and the job will be sent to a job queue for processing. A message will tell you that the job has been submitted.

Bank Names and Addresses Report

32/CSM

Select the *Bank Names and Addresses* option to produce a report listing all the bank branches defined to Cash Management with their addresses, country codes, and in alphabetical order.

No screen will be displayed as no parameters are required. Simply press the option number and the job will be sent to a job queue for processing. A message will tell you that the job has been submitted.

Parameters Report

33/CSM

Select the *Parameters* option, and a window will ask you to press **F8** to produce a report listing all the parameters defined to Cash Management, in sub-type within major type order and with other details.

Period End Calendar Report

34/CSM

Select the *Period End Calendar* option, and a window will ask you to press **F8** to produce a report listing all the period dates entered in the Cash Management calendar.

Miscellaneous Creditors Report

35/CSM

Select the *Miscellaneous Creditors* option, and a window will ask you to press **F8** to produce a report listing miscellaneous creditors.

Extended Terms Report

36/CSM

Select the *Extended Terms Listing* option, and a window will ask you to press **F8** to produce a report listing all the extended terms codes defined to Cash Management. This report prints all the details, including the ratios and the payment terms.

Payment Methods Report

37/CSM

Select the *Payment Methods* option, and a window will ask you to press **F8** to produce a report listing all the payment methods defined to Cash Management. This report includes all the details for each method.

Cash Apportionment Table Report

38/CSM

Select the *Cash Apportionment Table* option, and a window will ask you to press **F8** to produce a report listing the details of all the cash apportionment tables defined to Cash Management.

External Bank Details Report

39/CSM

Select the *External Bank Details* option, and enter the company for which a report listing the details of all the bank codes and addresses defined to the company is to be produced.

Interest and Commission Report

40/CSM

Select the *Interest and Commission Charges* option, and a window will ask you to press **F8** to produce a report listing the details of all the interest and commission charges set up within Cash Management.

Cheque Register Report

41/CSM

Select the CS maintenance report option *Cheque Register* to display the selection screen.

The details printed include date, payee name and account code, and reason code.

13-29 KS CL IM DM II MARVIN KB PKH312S1

Fields:

Bank Account

Enter an existing bank account. This field defaults to the Cash Management company profile default account.

Cheque Source

- 1 - Print Accounts Payable cheque details.
- 2 - Print Cash Management cheque details.
- Blank - Print both.

Cheque Number Range

Enter the range of cheques to be included on the report. Leave blank to select all cheques for the bank account.

These fields cannot be used if a batch is specified.

Or Batch

Enter the batch whose details are to be printed.
This field cannot be used if a range of cheque numbers is entered.

Reason Code

Enter a reason code. The report will exclude all cheques with a different reason code.

Leave blank to select all reason codes.

Press **F8=Confirm** to submit a job to produce a report listing all the cheques within the selected range in cheque number sequence.
