Chapter 8

Utilities

Cash Management Utilities

Cash Management provides a number of utilities for data verification and reorganisation. These utilities are not required during normal operation.

Warning: All the procedures which are provided here require great care and some require a detailed technical understanding of the application. It is recommended that these tasks be carried out with the advice of your accounts manager, computer manager, or software supplier.

- Company options enable you to copy data from an existing company to a new one, delete a company, and maintain single or group companies.
- Verification / Rebuild options reconcile Cash Management balances to transactions and to the attached General Ledger.
- Other - The first of these options enables you to reprint cheques as necessary.
- Initialise Bank Balances - When installing Cash Management, this option sets the balances of a new Cash Management application to match those of the General Ledger to which it is to be attached.
- Miscellaneous Creditor Name Scan Rebuild - When installing Cash Management, this option reviews the database to build the search and select facility available in Cash Management.

Important

The financial applications maintain balances using 'hidden' programs known as subsystems.

Certain Utilities options also maintain these balances, and if you enter one of these options while a subsystem is active a message prevents you from using the option.

All subsystems must therefore be turned off before such utilities can be used.

Template Companies

If you need to maintain several companies all in the same way, the easiest way is to set up all the companies as a group, with another company defined in the General Ledger as a template company. When you maintain the template company, the related group companies will be updated in the same way.

Create And Maintain Company Options

Two menu options are available:

- Create Company (by copying an existing company).
- Maintain Company (change 1 or more company details)

Create Company

1/CSU

This option enables you to create a new company by copying the contents of an existing company. The new company can be created in any library, not just in the same library as the existing company. Only the static data in a company can be copied; the copied data will not include transactions or balances.

Warning: Note that this facility will only copy companies. If you wish to create a separate company from scratch, this should be done using the Company Profile Maintenance option.

Select the *Copy* option, and you will see the following fields:

Fields:

From Company

Enter the company to provide the source details.

To Company

Enter the company to which the source details are to be copied.

Enter the company codes of the existing company and the new company, then press **Enter**. Two more fields are displayed:

Fields:

Country Code

Enter the country code of the new company.

Company Name

Enter the name of the new company.

Warning: If the company being copied is in a different country to the new company, you may have to amend the currency. That is, when the copy is done update the Currency field in the company profile.

Enter the country code for the new company, and the new company description. Press **Enter** to bring up a window asking you to enter the General Ledger company that this Cash Management company is to be attached to.

Copy Company Data Selection Screen

Press **Enter** to display the screen which enables you to select the data you wish to copy from the original company to the new one.

Payment Methods

1 - Copy payment methods to the 'To' company.

Parameters

1 - Copy parameters to the 'To' company.

Extended Terms

1 - Copy extended terms to the 'To' company.

Bank Interest / Commission

1 - Copy interest and commission definitions to the 'To' company.

External Bank Accounts

1 - Copy external bank account details to the 'To' company.

Transaction Definitions

1 - Copy ABR transaction types to the 'To' company.

This entry is relevant only if you use the Automatic Bank Reconciliation (ABR) facilities of Cash Management. When the magnetic tape is loaded, each

statement 'line' (transaction) has a code attached. The application uses the transaction types set up via the ABR options to identify the different types of statement transaction.

Cash Apportionment

1 - Copy cash apportionment definitions to the 'To' company.

Press **F8** to update.

Maintain Company

3/CSU

This option enables you to maintain a single company or a group of companies under a template company.

Select the *Maintain* option to see the following fields:

Fields:

From Company

Enter the company to provide the source details.

To Company

Enter the company to which the source details are to be copied.

Enter the company to provide the maintenance data and the target company. Press **Enter** to see the data for selection.

External Bank Accounts

1 - Copy the external bank account details from the 'From' company to the 'To' company.

Transaction Definitions

1 - Copy ABR transaction types to the 'To' company.

This entry is relevant only if you use the Automatic Bank Reconciliation (ABR) facilities of the Cash Management application.

When the magnetic tape is loaded, each statement 'line' (transaction) has a code attached. The application uses the transaction types set up via the ABR options to identify the different types of statement transaction.

Cash Apportionment

1 - Copy the cash apportionment definitions from the 'From' company to the 'To' company.

Make your selection, and press **F8** to update.

Delete Company

2/CSU

This option enables you to delete one or more companies.

Warning: WARNING. Great care is needed while performing this procedure. Beforehand, as well as creating a security copy of the files library, you may wish to archive the data you intend to delete.

Select the *Delete* option, and a list of available companies will be displayed:

Fields:

4(Select to Delete)

Enter 4 against each company you want to delete. Only those companies with the select field beside them are available for deletion.

When you have selected the companies you wish to delete, press **Enter**. The list of function keys at the bottom of the screen will change:

Press **F11** to confirm the deletion of the selected companies, or press **Enter** to exit or reselect companies.

Reconcile Balances to Transactions

1...
2...

11/CSU

This procedure verifies the balances on bank accounts by building balances from transactions held on the transaction file.

Select the *Reconcile Balances to Txns* option to see the following field:

Fields:

Company Code

Enter the code of the company whose bank balances you wish to recalculate.

Press **Enter** to show the message screen.

CS300RPL	Version 3.0 Financials	USER ED3	21/12/93 10:40:24
Cash Management Balance Reconciliation			
All bank accounts for company V3 Version 3.0 Financials will have their balances recalculated from the existing Cash Management transactions for that account code.			
A report will be produced as standard detailing the accounts that have discrepancies between the existing balances and the calculated balances.			
In addition, there is the option to physically update the Cash Management balance file with the newly calculated balances.			
Do you wish to update the file ? 0 (1=Yes,0=No)			
Press ENTER to submit the job.			
F3=Exit ENTER=Proceed with the reconciliation			

Fields:

Update The File

If there is a discrepancy found during the reconciliation and you wish to replace the current bank balance with the recalculated value, enter 1 here. Leave the field set to 0 to retain the current value.

Press **Enter** to submit a batch job to carry out the reconciliation. A report will be produced detailing any discrepancies found.

Reconcile to General Ledger

1...
2...**12/CSU**

This procedure compares the values held on the bank and General Ledger records and reports any discrepancies.

Select the *Reconcile to General Ledger* option, and enter the company to be reconciled. Press **Enter** to display the screen.

CS903	USER ED3	21/12/93
		11:14:04
Reconcile Cash Mgmt. to General Ledger

From Period	9311	
To Period	9311	
or		
From Session . . .	_____	
To Session	_____	
F3=Exit F8=Print Report F12=Previous		

Fields:

Period Range

Enter the start and end periods for which the reconciliation is required. The default is to use the current period only.

Session Range

Enter the start and end Cash Management session numbers for which the reconciliation is required.

Press **F8** to submit a batch job to carry out the reconciliation procedure. A report will be produced detailing any discrepancies found.

BSP – Recovery

13/CSU

This option should be used if you lose communication with your computer while entering postings via the Bank Statement Postings option.

Select the *BSP - Recovery* option.

The data you have entered up to the last time you pressed **Enter** will be recovered, and the statement itself will have its status set to 'suspended', so that entries can continue to be made.

This procedure does not recover data which has been sent as postings in the batch job.

AR Interface Posting Recovery

14/CSU

This option should be taken if the interactive job AR Interface Posting fails. It enables you to change the status of the session so that you can re-enter that session and complete the job normally. Simply enter the account and interface posting reference on the entry screen to restart the process.

Select the *AR Interface Posting - Recovery* option to see the following fields:

Fields:

Bank Account

Enter the bank account of the statement to be recovered.

Statement Reference

Enter the reference of the statement to be recovered.

Press **Enter**, and the **F8** for update key will appear at the bottom of the screen. Press **F8**, and a message will tell you when the statement has been recovered.

Reprint Cheques

31/CSU

This procedure is provided to enable you to replace cheques which have been lost or damaged.

Note: This procedure may be run only if cheque numbers have not yet been allocated to the payments.

Select the *Reprint Cheques* option and enter the company for which cheques are to be reprinted. Press **Enter** to display a screen with a single field:

Fields:

Option

1 - Reprint cheques which originated in Accounts Payable.

2 - Reprint cheques which originated in Cash Management.

If you select the Accounts Payable option and press **Enter**, you will now see a list of AP companies. Enter 1 against the relevant company.

If you select the Cash Management option, the company listing screen will be omitted.

Press **Enter**. Here the two options join again, and whichever selection you made you will see a screen asking you to enter an account number. Enter the bank account for which you want to reprint cheques.

Press **Enter** to display a list of cheques eligible for reprinting.

Reprint Cheques Detail Screen

20001709	La Parfumerie Agnes	227.50	FRF 1

F8=Accept cheques for printing F12=Previous

All cheques in the list default to 1 in the select field, meaning that they are selected for reprinting. To deselect, remove the 1 from the field. When you are ready to submit a job to reprint, press **F8**.

Initialise Bank Balances

32/CSU

If Cash Management is being installed into a live environment, the General Ledger accounts defined as bank accounts to Cash Management may already have a balance.

This balance is posted to the Cash Management balance record using this procedure. No postings are made to the General Ledger, so the Cash Management balance is brought into line.

Note: This procedure should be used only when installing Cash Management onto a system where the General Ledger balance already exists.

Select the *Initialise Bank Balances* option and enter the company for which balances are to be posted. Press **Enter** to display the following field:

Fields:

Bank Acct Code

Enter here the bank account whose balance is to be posted.

Press **Enter** to display the Enter Bank Account Balances screen, asking for the balance details.

Bank Account Balances Screen

Display and add balances for the selected bank account.

CS911	Demonstration Company	USER ED3	21/12/93 11:15:21
Enter Bank Account Balances			
Bank Acct Code.: 512100			
Bank Name: BARLOWS- GBP CURRENT A/C			
Bank Description: GBP CURRENT A/C			
General Ledger Value.: _____		10000	GBP
Cash Mgmt Value.....: _____		5000	
F3=Exit F12=Previous			

Fields:

General Ledger Value

This field holds the account balance in base currency. This value will not be posted to the General Ledger, but held as a Cash Management transaction for the item enquiry.

Cash Management Value

This value must be entered in the currency of the bank account selected.

Press **Enter** to return to the account selection screen and enter the next account for which a balance has to be set up. When all balances are initialised, press **F8** to update.

Miscellaneous Creditor Name Scan Rebuild

33/CSU

This procedure enables you to reconstruct and thereby update the index used on the miscellaneous creditors name scan facilities.

Select the *Miscellaneous Creditor Name Scan Rebuild* option, and enter on the selection screen the company whose name index you wish to rebuild. Press **Enter** to submit a job to rebuild the name scan index.

Recalculate Discount

1... **34/CSU**
2...

This option recalculates the discount value and date for all open items which have a discount code.

The option submits a batch job to carry out the recalculation, and produces two reports.

- An audit report prints the documents whose discount date or value have been changed with previous and new discount dates and values.
- An exception report prints the details of any document which was unsuccessfully processed.

Select the Cash management utility option
Recalculate Discount.

CS113CLP	Z1 - UK Demonstration Company	GBJBA1MS	2/06/98 8:26:35
Recalculation of Available Discount			
Select the required application(s):			
Accounts Payable 0			
Accounts Receivable . . 0			
-			
1=Select			
F3=Exit F8=Confirm			
MA a		MW	16/040

Fields:

Accounts Payable

1 - Recalculate the discount details for all the open items within Accounts Payable.

You can recalculate for both Accounts Payable and Accounts Receivable by entering 1 in both fields.

Accounts Receivable

1 - Recalculate the discount details for all the open items within Accounts Receivable.

You can recalculate for both Accounts Payable and Accounts Receivable by entering 1 in both fields.

Select the applications required, and press **F8=Update** to submit the batch job which performs the calculations.

Rebuild Cash Allocation Data Queue

1...
2...

35/CSU

When a session is confirmed, it is written to a data queue which holds all unprocessed sessions. These sessions are then processed as a batch job. If for any reason the data queue were to become corrupted, the option to rebuild it will cause all unprocessed transactions to be checked, and all sessions with unprocessed transactions to be added to the data queue, where processing will then continue as normal.

Note: The process will not cause a transaction to be processed twice. If a session holds both a processed and an unprocessed transaction, only the latter will be processed.

The procedure requires no parameters to be specified, so no screen will be displayed. A window will display asking you to wait whilst the data queue is being rebuilt.

Delete Redundant Data

36/CSU

This procedure enables you to delete redundant data in order to free storage space on the system. You can also choose to archive (save) it to an off-line medium from which it may be restored, as required, for enquiries and reports.

At this option redundant data is archived for selected data types up to a select period end. You may also elect to delete statement and audit details up to a selected cut-off date.

The data is removed from the active fields and items are deleted if the following conditions are met:

- The item has an outstanding balance of zero.
- Its posting period is prior to the limit specified on the company profile.
- After the purge each customer must still retain the minimum number of transactions specified on the company profile.

For any customer, a period's transactions must be completely cleared by meeting the above (list of three items) criteria, otherwise no transactions will be cleared at all for that period.

A customer will be deleted if it has a summary balance of zero and no items present on the active system, and is flagged for deletion on the customer maintenance file.

An audit record will be deleted if it is written on or before the cut-off date specified.

Warning: WARNING! Before running this procedure, you are strongly advised to make a security copy of the files library.

Select the *Delete Redundant Data* option. The first screen allows you to specify where to look for the delete / archive programs and to name the files to be used when it performs the delete or archive procedure. The default values of **LIBL* should suit any normal delete / archive procedure, and changing these should rarely be necessary.

The work library, however, must be specified. This should be the name of a general purpose library which the delete / archive procedure can use to store certain files while the procedure is going on. This will commonly be a new library created for the task and which will be deleted when the task is completed.

Fields:

Company Number

Enter the company that you want to archive and purge.

Transactions

1 - Delete closed transaction items up to and including the cut-off period entered.

Blank - Omit closed transaction details from the archive run.

Collection Documents

1 - Delete closed collection documents up to and including the cut-off period entered.

Blank - Omit closed collection documents from the archive run.

Period Balances

1 - Delete period balances up to and including the cut-off period entered.

Blank - Omit period balances from the archive run.

Enter A Cut-Off Period For The Above

Enter the latest period to include archived items. The selection of transactions / collection documents / period balances will be deleted from the ledgers. The period entered must be before the current period and after the last archived period.

Statement Details

1 - Delete statement details up to and including the cut-off date entered.

Blank - Omit statement details from the archive run.

Company Profile Audit

1 - To delete company profile audit records up to and including the cut-off date entered.

Blank - Retain company profile audit records up to the cut-off date entered.

Bank Details Audit

1 - To delete audited bank details up to and including the cut-off date entered.

Blank - Retain audited bank details up to and including the cut-off date entered.

Enter A Cut-Off Date For The Above

Enter the cut-off date for the deletion of audit files. Audit records as selected are deleted prior to and including this date.

Once the archive criteria have been entered, press **Enter**. The entries are then validated. Press **F8** to proceed with the purge. The system displays the 2nd Delete Redundant Data screen.

Delete Redundant Data Submission Screen

SL930	ACCOUNTS RECEIVABLE UTILITIES	User ED3	28/04/94 11:11:43
-------	-------------------------------	----------	----------------------

Delete Redundant Data

A batch job has been submitted to purge the Accounts Receivable as requested.
The purged data will be saved in the library OSLSLA21020
After completion of the batch job, please make TWO copies of this library
on tape and label the tape clearly.
Only then, delete the library.

Press ENTER to continue.

The Delete Redundant Data Submission screen includes the name of the library which is created as a result of archiving the purged data. Make a note of this library name, and then press **Enter**.

This utility generates library names for 1000 runs. If you exceed this number a further screen is displayed on which you enter the library name in which the archived data is stored.

After the purge has completed the library quoted on the final screen of the purge can be saved onto magnetic media and deleted from your computer. Should you need to enquire/report on this library it can be restored and the historical data options can be used to interrogate it.

Reorganise Files

1...
2...**37/CSU**

When data is deleted from an application using the maintenance options, the data is marked for deletion in the file, but is not actually deleted from the system. The Reorganise Files option removes such marked records from the files, freeing valuable storage space.

Files in other applications also need re-organising from time to time, it therefore makes good practise to re-organise files on a regular basis possibly from the auto day end option.

Select the *Reorganise Files* option and the first screen allows you to specify where the program should look for the programs and files when it performs the procedure.

The work library, however, must be specified. This should be the name of a general purpose library which the utility can use to store certain files while the job is active. This will commonly be a new library created for the task, which will be deleted when the task is completed.

SLMENU-U	Sales Ledger Company Utilities	User ED3	28/04/94 11:12:39
Re-organize Physical Files			
Libraries Selection			
Object....	*LIBL	E.g., utility program(s) to be run.	
Files.....	*LIBL	E.g., files from which to delete a company.	
Work.....	OSLSAVE	E.g., work library used during some utilities.	
F3=Exit			

Press **Enter**, and the next screen asks you to confirm your decision to reorganise your files. Press **F8** to confirm, or **F3** to leave the option.

Start / End Balances Update

38/CSU

Cash Management Advanced Cash Posting and Cash Allocation transactions are written to a data queue (CS_BALUPDS) and then processed by a background sub system CSBACK3

If the subsystem is inactive, balances are not updated, but remain on the data queue until the subsystem is activated, at which time the updates will commence.

This option enables you to activate and deactivate the Cash Management subsystem. This will often be done automatically as part of the day start and day end routines within Machine manager.

The Financials applications update balances using background subsystems. Certain Utilities options also maintain these balances, and if you enter one of these options while a subsystem is active a message prevents you from using the option. All subsystems must therefore be deactivated before such utilities can be used.

Select the CS utility option Start / End Balances Update.

The relevant subsystem name displays at the top of the screen with a status of active or inactive.

Fields:

Send Error Messages To

Enter the user ID of the user to whom any sub-system messages are to be sent. It is a good idea to direct messages to your system operator rather than the default QPGMR.

Send Error Reports To

Enter the user I.D. of the user to whom any sub-system reports are to be sent. . It is a good idea to direct messages to your system operator rather than the default QPGMR.

Functions:

F11

End Subsystem. If the screen you see shows that the subsystem is active, and you wish to deactivate it, press **F11=End Subsystem**. After a short delay the system will deactivate the subsystem.

F18

Display Subsystem. A screen displays all subsystem jobs along with options to work with jobs and spool files. Function keys are also available to retrieve commands, display function schedule, refresh the screen or exit the screen display.

If the update screen shows that the subsystem is currently inactive, to activate it, press **F10**..

Historical Data

The Cash Management application provides facilities to archive data no longer needed for operational use. This involves saving the data so that it can be stored off the machine, releasing space for new data,. The Delete Redundant Data option in the Utilities section describes how this is done.

Data saved in this way is called historical data, and each time data is archived a single new library is created to hold the historical data.

To access the historical data facility, select the *Historical Data* option. The system displays the 'Report on Archived Transaction' screen with the option to select an archive library to enquire upon.

To select the library that you want to use, enter 1 in the 'Opt' column to the left of the appropriate line.

When you have made your selection, press **Enter** to produce the report on archived data.

Note: If the archive library selected does not exist on the machine, an explanatory message is displayed. In this case, contact your systems department to have the library restored to the application.

The column headed 'Purge of abcdef' indicates which type of purge has been undertaken in the archive library. 1 will display under 1 or more of the columns.

- a - Transactions
- b - Collection documents
- c - Period balances
- d - Statement details
- e - Company profile audit
- f - Bank details audit
