Chapter 4

Enquiries and Reports

Introduction to Fixed Assets Enquiries and Reports

Fixed Assets provides a comprehensive range of enquiry facilities covering assets, transactions, sessions and reference codes.

The asset enquiries can range from an elementary (single screen) enquiry to a multiple selection, many-faceted enquiry on all aspects of asset information.

Transaction enquiries can be tailored to be highly selective.

Tip: The principle of the transaction enquiry is similar to Transaction Search Enquiry in the General Ledger Enquiries and Reports options.

The sessions enquiry displays a list of sessions, with the latest shown first.

General Ledger Enquiry

The GL enquiry will be of use to you when reviewing the status of your asset transactions. It is not found in Fixed Assets, you must select the General Ledger Transaction / Session Enquiry option. Select the session you wish to review and then select the transaction you need from the list shown.

Reports

Reports can be classified into four types:

- Maintenance reports print any amendments made to the company profile, to book profiles, to system reference data, to hierarchy codes or to the financial calendar. These are dealt with in the Maintenance section of the product information.
- Audit reports, available for all maintenance movements, all asset maintenance movements and all sessions.
- Database and transaction reports using Report Manager. This is the largest group of reports. They can be initiated for each aspect of an asset. A set of default reports is provided, but the Report Manager feature will enable you to modify existing reports and build new reports. You can:
 - Select assets as required
 - Include or exclude certain features, such as leased assets, disposed-of assets, and external funding
 - Produce a summary report, a full list or a print including dependent asset
 - Print either base details or financial details
- Other reports, for example the Full Hierarchy Detail report.

Note: One important report is the Provisional Depreciation report, which is automatically produced when the Provisional Depreciation option is run.

Assets Enquiry

Enquiry type	Enquiry title
201	Base detail
205	Analysis codes
206	Notepad (advanced Fixed Assets only)
210	Financial details
212	External funding (advanced Fixed Assets only)
213	Lease details (advanced Fixed Assets only)
214	Dependent assets
215	Depreciation book
216	Asset book summary
217	Asset dependent book
218	Period depreciation
219	General Ledger accounts
220	Asset revaluation
225	Depreciation
235	Disposal

This option offers you several ways of selecting an asset or assets, together with alternative ways of selecting enquiries relating to the selected assets.

You can enquire on a single asset by asset number or using search facilities. You can then see one asset displayed on a single screen, or enquire on many assets from a selection screen.

You can enquire on many assets, by hierarchy or analysis code. You can then see one asset displayed on a single screen, or enquire on many assets from a selection screen.

Select Assets (Enquiries and Reports) and press **Enter** to see the first Asset Enquiry Selection screen.

Asset Enquiry Selection Screen 1

As an asset can have so much information defined to it, it cannot all be displayed on one screen. It is therefore divided into several screens, each of which has a reference number known as an enquiry type. These enquiry types are set up as reference codes, under the code 'NXTE' ('Next Enquiry Type'), and you can enter an enquiry type on this selection screen if you know exactly which asset information you need.

These enquiry types will all be listed for you if you prompt on the 'Enquiry Type' field.

Single Asset Enquiry

Selection of a single asset is undertaken using the fields in the top third of the screen.

If a specific asset code is entered together with an enquiry type then the relevant single asset enquiry screen is displayed. If that enquiry type is for notepad or for a book, then you must enter the notepad or book in the fields below.

If you need to enquire into many aspects of an asset, then a better way of achieving this would be to enter the single asset but no enquiry type. Press **Enter**, and you will see the second Asset Enquiry Selection screen.

Group Asset Enquiry

Selection of groups of assets is undertaken using the fields in the lower two-thirds of the screen. There are two possibilities:

- Select an appropriate combination of hierarchy type and code to select all analysis codes that satisfy this combination of criteria.
- Use the analysis type and associated analysis detail codes to select groups of assets. There are in the lowest third of the first Asset Enquiry Selection screen, additional parameters which can further qualify, limit or add to the selection controlled by the analysis codes.

```

Fields:

Asset

Enter the asset you want to enquire on.

Enquire On Dependents

1 - show successively all the dependants of the chosen asset.

Enquiry Type

Enter the enquiry type you require. The enquiry types are system-defined and are held in the systems reference code NXTE - Next Enquiry Type.

If you wish to enquire on many aspects (i.e. enquiry types) of this asset, leave this field blank. When you press Enter the second Asset Enquiry Selection screen will enable you to select each aspect.

Notepad

Enter the notepad code you require, if you wish to maintain or enquire on the notepad as part of this enquiry.

The notepad codes are held in the systems reference code 'NPTY' (Notepad Type). If notepad is entered, the appropriate notepad enquiry type must also be entered.

Book

Enter the financial book required for this asset enquiry. Various aspects of the asset/book record can be selected if the book field is left blank and selected from the secondary selection screen.

If book is entered, the enquiry type must also be entered.

External Funding

1 - Assets in the selected analysis group are to be included in the final selection only if they have external funding.

2 - Assets in the selected analysis group are to be excluded from the final selection, if they are subject to external funding.

Disposal

1 - Assets in the selected analysis group are to be included in the final selection only if they have disposal value.

2 - Assets in the selected analysis group are to be excluded from the final selection, if they are subject to disposal value.

Book

1- The assets in the selected analysis group are to be included in the final selection only if they are attached to the selected book.

2 - The assets in the selected analysis group are to be excluded from the final selection if they are attached to the selected book.

Unnamed (Book Code)

Enter the book to which the 'Book' field setting is to apply.

Revaluation

1 - Assets in the selected analysis group are to be included in the final selection only if they have revaluation.

2 - Assets in the selected analysis group are to be excluded from the final selection, if they are subject to revaluation.

Press **Enter** to see the next screen. Which screen this is depends on your entries here:

- If you entered a single asset and specified an enquiry type, you will see the screen related to the enquiry type you asked for.
- If you entered a single asset but did not specify an enquiry type, you will go to the second Asset Enquiry screen.
- If you entered a range of assets you will see the third Asset Enquiry screen.

Asset Enquiry Selection Screen 2

If you entered an asset but no enquiry type on the first Asset Enquiry Selection screen, you will now see this second selection screen.

Up to 15 different enquiries can now be seen for your selected asset.

0 - Lease details enquiry not required.

Book Summary

1 - See the 216 - Asset Book Summary screen.

0 - Book summary not required.

Value

1 - See the 215 - Depreciation Book Enquiry screen for the depreciation book specified.

Reval

1 - See the 220 - Asset Revaluation Enquiry screen for the depreciation book specified.

Dep'n

1 - See the 225 - Asset Depreciation Enquiry screen for the depreciation book specified.

Per Dep'n

1 - See the 218 - Asset Book Depreciation screen for the depreciation book specified.

Ac's

1 - See the 219 - Asset Generated General Ledger Account Enquiry screen for the depreciation book specified.

The enquiries relating to each selected aspect of the asset will be displayed in sequence.

Tip: At the conclusion of the series of enquiries, the display returns automatically to the second selection screen.

Asset Enquiry Selection Screen 3

If you select a range of assets for an enquiry on the first Asset Enquiry Selection screen, your next screen will be the third Asset Enquiry Selection screen, listing all assets within the range you have selected.

F3=Exit F4=Prompt F12=Previous

16-11 **S2** MW KS IM II EDN400A PED169S1

Fields:

1 (Select)

Enter 1 against an asset to go to the second Asset Enquiry Selection screen, where you can select the enquiry screens you wish to see for that particular asset. When you press Enter on the second Asset Enquiry screen, you will return to this screen. The system will remember the selections you made.

You can select more than one asset.

When you have entered 1 against an asset, you can not then enter anything in any of the other three fields for that asset.

Tip: When you have entered 1 against an asset, you can enter selections in the other three fields for any other asset. This is worth noting, as it is not what you might expect from a selection screen. The enquiries will all be processed in turn.

Enq

(Enquiry type). Enter the enquiry screen you wish to see for this asset, using the enquiry type numbers.

If you use this field, do not also select the asset with 1 in the 'Select' field.

Nte

(Notepad). Enter the notepad you wish to see for this asset, using the enquiry type numbers.

If you use this field, do not also select the asset with 1 in the 'Select' field.

Bk

(Book). Enter the book you wish to see for this asset, using the enquiry type numbers.

If you use this field, do not also select the asset with 1 in the 'Select' field.

Press **Enter**. The enquiries you requested will be displayed in turn.

Note: As each enquiry is displayed, the next enquiry number to be displayed is shown in the Next Enq Type field at the bottom left hand corner of the screen. At the last enquiry, this field will be blank.

At the conclusion of this process, you should have returned to the supplementary asset selection list where the originally selected assets are still shown, but without the selections in the left-hand columns.

Asset Base Details Enquiry Screen (201)

This screen displays the asset's basic details. All assets have at least some of these details defined.

Elementary Assets Enquiry

This enquiry can be used on any asset. It displays the base and financial details, depreciation details and analysis details of the selected asset.

Select Elementary Assets (Fixed Assets Enquiries and Reports), enter the asset number, and a depreciation book if required.

If you prompt using **F4**, notice that the prompt window has an 'Ex Disp' field. Enter 0 to include disposed-of assets, or 1 to exclude them. Two function keys are also available:

Functions:

F19

The asset list will be displayed in alpha-numeric sequence based on the characters in the search argument.

F21

The asset list will be displayed based on the alpha-numeric sequence of asset codes.

Press **Enter** to see the second Elementary Asset Enquiry screen.

Elementary Asset Enquiry Screen 2

When you have selected the asset and any book you wish to enquire on the first Elementary Asset Enquiry screen, press **Enter** to see the second Elementary Asset Enquiry screen.

Fields:

Disposed Of

0 indicates that the asset is current.

1 indicates that the asset has been disposed of

Include Dependents

0 - Dependants are not included.

1 - Dependants are included.

The setting is determined by the type of book.

Book Value

If dependent assets are included, the book value will show the summary value.

Wdv

The 'written down value', which is the book value less any accumulated depreciation.

Depn Prev Yr

The value of accumulated depreciation as at the end of the previous year.

Depn Ytd

The value of accumulated depreciation for the current year so far ('year to date').

Sessions Enquiry

The session enquiry displays all sessions showing the latest first. A session is created whenever any asset maintenance activity is initiated. It contains details of all transactions created within it. A session is created whether or not transactions are created. If maintenance activities are started and abandoned (using **F3**) the session will be empty of transactions.

Select Sessions (Enquiries and Reports) to see the first Session Enquiry screen.

F3=Exit F5=Refresh									
07-04 SF MW KS IM II EDN400A PED169S1									

Fields:

1

Enter 1 against any session you wish to enquire on.

Session Number

This is generated by the system.

Session Type

This is a system-defined code, found in the system reference codes under 'STYP' (Session Types), and indicates the type of maintenance activity, for example:

10 - Asset maintenance

41 - Depreciation posting

User ID

The name of the user at the time the session was recorded.

Start Date

The date that the session was started.

Start Time

The time that the session was started.

End Date

The date of the completion of the session.

End Time

The time of the completion of the session.

Sts

The status of the session.

- 1 - The transaction is in progress.
- 2 - The transaction has been completed, but has not been updated by the Fixed Assets or General Ledger updating system.
- 3 - The transaction has completed successfully.
- 4 - An error has occurred with the transaction (the posting has invalid entries, for example the 'ANTY' codes do not exist in the General Ledger).

Note: A failed session is held at status 1 with a date of 99/99. It needs to be investigated. Recovery is done via the Session Recovery option utilities option.

Post Perd

The posting period for the session.

Select a session and press **Enter** to see the second Session Enquiry screen.

Session Enquiry Screen 2

Select a session on the first Session Enquiry screen and press **Enter** to see the second Session Enquiry screen. The documents generated in this session are displayed.

Transactions Enquiry

The system records as a transaction every financial value that is affected by any maintenance activity.

This enquiry enables you to define a profile of the transactions to be selected. Its operation is very similar to that of the Transactions Search Enquiry in General Ledger.

Selected transactions are listed and you can enquire further into any transaction to display all transaction detail lines for a given transaction document reference number.

You should be prepared for this enquiry to take time to respond, since it builds a transaction list from the full transaction file, which, after the system has been in operation for a time, may be of a considerable size.

Select Transactions to see the Transaction Enquiry Selection screen.

Transaction Enquiry Selection Screen

F3=Exit F4=Prompt F5=Refresh					
12-77 SF MW KS IM II EDN400A PED169S1					

Fields:

Asset Number Range

Enter the range of asset numbers that you wish to select. Both fields can be left blank to obtain all assets.

Leave the 'from' field blank to select all assets from the beginning, and the 'to' field blank to select all assets to the end.

The values in either field do not themselves have to be valid values for that field.

Order (1-5)

If you wish to sequence up to 5 selections in order of priority within the report, then enter the value here. 1 is the highest priority.

Asc / Desc

0 - Transactions will be displayed in ascending order (i.e. from A-Z in the case of characters, 0-999 in the case of numbers). This is the default value.

1 - Transactions will be displayed in descending order (i.e. from Z-A in the case of characters, 999-0 in the case of numbers).

Posting Period Range

Enter an appropriate range or leave blank. All transactions must have a valid posting period.

Document Reference Range

This is the system-generated or user-defined document reference number (found in the centre of the header section of all maintenance transactions).

Reminder: The way in which the document reference is used is defined in the company profile.

Document Date Range

This should be entered as DDMMYY.

Reason Code Range

The codes are available through search facilities. Note that since this is an optional field, not all transactions may have a reason code.

Item Type Range

The procedure that is used to update an asset record is defined under an item type code (ITYP), for example:

101 - Base details

110 - Financial details

Transaction Type Range

This is the financial transaction type whose code is ACTY General Ledger account types in the system reference code list, for example:

002 - Asset additions

325 - Period depreciation

Transaction Value Range

Enter the range of transaction values to be included in the enquiry.

Fixed Assets Session No Range

Every time a Fixed Assets maintenance procedure is initiated, a session number is allocated.

General Ledger Session Range

When financial transactions are created which are posted to the General Ledger, a General Ledger session number is generated. Transactions can thus be selected by General Ledger session number.

Book Range

Enter the range of book numbers for which you require to select transactions.

Press **Enter** to see the first Transaction Enquiry screen.

Transaction Enquiry Screen 1

The first Transaction Enquiry screen lists the assets you selected on the first screen.

Assets Audit Report

This shows the changes made to any of seven aspects of an asset. Each report carries details of the user, the terminal used, the date and the time of the change and the type of amendment.

The seven facets about which separate reports are available are:

1. Asset Base Details
2. Asset Analysis Details
3. Asset Financial Details
4. Asset Funding Adjustments
5. Asset Lease Details
6. Asset Depreciation Book
7. Asset Disposal Details

Select Assets (Reports) to see the Asset Audit History Reports screen.

```

```

Fields:

Select Option

- 1 - Print all unprinted audit records.
- 2 - Print all audit records for a nominated user ID.
- 3 - Print all audit records for a nominated session number.

User ID

If 2 was entered above, then you must enter a valid user ID.

If 3 was entered above then you can enter a user ID if required.

The field can be blank.

From Session

If 2 was entered above, then you can enter a session.

If 3 was entered above then you must enter a session.

The field can be blank.

Note: The session number that is used indicates the start of the listing. All sessions subsequent to the chosen number will also be listed.

Press **Enter** to run the report.

Database and Transaction Reports

This group of reports all follow a similar selection pattern. They can all be amended by using the Report Manager facility within the report selection screen itself. These reports are as follows:

Depreciation Books (by Book)

Assets are listed by book. The report shows each asset, book value, depreciation and written down value.

Note: An asset can appear several times under different books.

Depreciation Books (by Asset)

Each asset is shown with key financial data followed by each book to which it is attached, showing book value, depreciation and written down value.

Revaluation Details by Asset

The report lists only those assets with a revaluation record. The asset cost and replacement values are printed. For each financial book in which a revaluation has been made, the report lists the book value and for both the original and latest revaluations shows the value, date and period of valuation.

Asset Disposal Details

The report lists details of assets which have been disposed of, including residual and sales values

Each book attached to the asset is listed, together with book value, written down value and profit or loss on disposal.

Asset Analysis Codes Report

The report lists the analysis codes for the selected assets.

Assets by Hierarchy Report

The report prints a multi-level hierarchy structure listing assets occurring within the bottom analysis codes level of the structure. Hierarchies that have no assets are not listed.

Asset Listing Report

One line is printed per asset. You can list dependent assets within the parent section. There are two versions of the report.

- basic data
- financial data

For each depreciation book the report shows valuation and depreciation data together with book, depreciation and written down values.

Asset Register Report

For each asset, basic description and date details are listed, together with asset analysis, book and depreciation details.

External Funding Details Report

The report is programmed to select only those assets which have external funding and shows the asset cost and the total funding split between capital and revenue components.

Lease Details by Asset Report

The report selects only leased assets and shows the leasing details for each asset.

Asset Transactions Report

The report prints, in the requested sequence, details of all transactions that meet the selection criteria. The detail shown includes:

- the document / reference date
- the transaction value
- the General Ledger accounts generated
- the GL session number, if posted to the GL.

Care should be taken with this report since transaction volume could be high.

The sample report, has been requested to select period depreciation transactions only.

General Ledger Accounts by Asset

For each selected asset and for each book attached to each asset, the report prints the General Ledger accounts that are generated for each financial transaction.

Whichever of these options you take, you will see the same selection screen, but with different fields shown or hidden.

-----
F3=Exit  F4=Prompt

07-30  SF  MK  KS  IM  II  EDN400A  PED169S1
```

Fields:

Within Hierarchy Type

If the assets included in this report are to be selected by hierarchy type, enter the required code.

If a code such as region is entered, the range of detail codes within this (for example 'Midlands' or 'North West') can be selected from within the Report Manager instruction set.

With Analysis Types

Enter up to three analysis codes (such as asset type or location). Note that the first code is included as a default, having been set up in the company profile.

Again ranges or selection of detail codes can be determined within the instruction set.

Instruction Set Selection

Enter the name of the Report Manager instruction set to be used. The systems defaults to the instruction set last used.

You can replace this with one of your own or with a standard application defined set.

To enter a new set, enter ? in this field and press Enter.

Note: An instruction set can be used for several different reports but a given report can use only one type of set.

External Funding

0 - Include externally funded assets

1 - Assets to be included only if the asset is externally funded.

2 - Assets to be excluded if there is an externally funded record.

Disposed Of

0 - Include assets that have been disposed of.

1 - Include an asset only if the asset has been disposed of.

2 - Exclude assets if they have been disposed of.

Leased Assets

0 - Include leased assets.

1 - Include only leased assets.

2 - Exclude leased assets.

Print Format Type

0 - The report is to print base details only.

1 - The report is to print financial details only.

2 - Print summary details only. This is the default.

Detail

0 - Print base details.

1 - Print financial details.

Press **Enter** to submit the report.

If you entered ? into the 'Instruction Set Selection' field, then when you press **Enter** you will see another screen, listing all existing sets, the Select Report Instructions screen.

Select Report Instructions Screen

All instructions available for selection are listed.

```

XA751          F0 - Fixed Assets V3 Company - F0  USER FAF0      12/12/95
                                           16:48:00

10-03      82      MW      KS      IM      II  EDN400A  PET091S1
  
```

Fields:

Sel

1 - Select a particular instruction set for processing, and return with it to the initial screen.

2 - Amend an instruction set.

Note: Application - defined instruction sets (indicated by OSL in the Authority column) are not available for maintenance.

3 - Copy an instruction set as a basis for a new set. The Create / Copy Report Instructions screen (F10 or Option 3) allows the entry of the name, description and authority for the new set.

4 - Delete an instruction set.

Note: Application - defined instruction sets can not be deleted.

5 - Display the instruction set without the opportunity to maintain it.

6 - Return to the previous screen with the chosen instruction.

9 - Print the instruction set. This is done automatically when a report is run.

Functions:

F10

Create new instructions.

Press **Enter**. The next screen depends on the selection you made.

Options 1 and 6 take you back to the initial screen and enter the set in the 'Instruction Set Selection' field.

Options 2 and 5 display the Maintain Instruction Set screen. For option 5, all maintenance fields are display only fields.

Option 3 and function key **F10=Create New Instructions** display the Create / Copy Report Instructions screen.

Create / Copy Report Instructions Screen (F10 / Option 3)

This is the screen you see if you select an instruction set using option 3, or if you pressed **F10=Create New Instructions**.

XA751		F8 - Fixed Assets V3 Company - F8		USER FAF8	27/10/95

NEWREPORT	List of all Building Assets by Location				
F12=Return					
11-57	SP	MK	KS	IM	II EDN400A PED169S1

Fields:

Instrn Name

Enter a name for the instruction-set.

Instructions Description

Enter a description for the instruction-set.

Authority

*PUBLIC - Any user can use, maintain or delete this instruction set.

*PRIVATE - You have sole rights to the use, maintenance, printing and viewing of the instruction set.

OSL - A system-defined instruction set, provided as a default for each report. The set can be selected copied, viewed and printed, but cannot be maintained.

Press **Enter** to see the Maintain Instruction Sets screen.

Maintain Instruction Sets

To reach this screen you must have:

- Pressed **Enter** from the Create / Copy Report Instructions screen.
- Selected an instruction set from the Select Report Instructions screen using option 2 or 5.

The screen shows the fields that are part of the instruction set.

The first nine fields are those by which the selection of assets for inclusion or exclusion can be precisely defined. You should not, however 'select' the hierarchy or analysis codes to refine your selection. The analysis detail codes should be used for refining selection data, and may also be used for sequencing and creating sub-totals

The following fields which extend on to a continuation page are those appropriate either to an asset record or to a transaction record. Roll to the next screen.

Most of the fields can be used in a set of relationships by which the instruction set is built up.

XA752		F8 - Fixed Assets V3 Company - F8		USER FAF8		27/10/95

Fields:

Select

GT - Greater than

GE - Greater than or equal to

LT - Less than

LE - Less than or equal to

EQ - Equal to

CT - Contains the characters

NG - Not greater than

NE - Not equal to

NL - Not less than

RANGE - In the range of both Value 1 to Value 2 inclusive.

Values 1 And 2

The relationship expression requires a value. For all except RANGE, the Value 1 field is the only field required.

Key Seq

The key sequence defines the sequence within which records are to be printed on reports. 1 is the highest level and 9 the lowest.

Note: Sequencing is independent of the selection criteria.

Key Order

Define the order in which sequenced fields are to be listed:

A - Ascending. This is the default.

D - Descending.

Report Break

0 - You do not require sub-totals to be printed on change of sort sequence.

1 - You require a sub-total to be printed on change of sort sequence.

Note that for this field to be meaningful, the report must have multiple sequences and must have a 'Key order'.

Functions:

F5

Refresh rule

F9

You can create multiple relationship expressions within one rule. When you have entered one set of expressions, press **F9=Next Rule** and the system will save the rule you have entered and present you with a blank screen ready for entry of another rule for the same instruction set.

Press **Enter**.

The system returns to the Select Report Instructions screen. Select 1 and press **Enter** to submit the report for processing.

Full Hierarchy Detail Report

The report lists all selected hierarchies down to their lowest level.

Select the Full Hierarchy Detail option to see the Hierarchy Detail Listing screen.

Fields:

Within Hierarchy Type

Enter the hierarchy type to be printed.

With Hierarchy Codes

Within the selected hierarchy type you can specify two ranges of codes to be included in the report.

These fields are optional.

Press **Enter** to submit a job to produce the report.
