Glossary

Glossary

ABC

Also known as Advanced Business Costing. This is one of the Modules to which AFI can post transactions. It offers extensive analysis function, and can be used to analyse non-financial as well as financial information.

Advanced Business Costing

Also known as ABC. This is one of the Modules to which AFI can post transactions. It offers extensive analysis function, and can be used to analyse non-financial as well as financial information.

Account Code

An account set up in the General Ledger to receive postings.

Account Code Rule

The rule which defines how a General Ledger account code or an ABC analysis code will be generated within AFI.

Account Level Structure

The structure which defines, within your General Ledger, how your account codes are formatted.

Advanced Financial Integrator

Also known as AFI. This is a module which takes transactions posted to it by source Modules (e.g. Sales Order Processing), and posts them on to either General Ledger or Advanced Business Costing. Its main function is to derive the codes it is going to post to from the data in the source transactions.

AFI

Also known as Advanced Financial Integrator. This is a module which takes transactions posted to it by source Modules (e.g. Sales Order Processing), and posts them on to either General Ledger or Advanced Business Costing. Its main function is to derive the codes it is going to post to from the data in the source transactions.

Analysis Code

AFI uses source transactions to derive account codes for postings to GL, and to derive analysis codes for postings to ABC.

Archive

To copy data from the current data file libraries to alternative libraries, usually prior to backing-up to an off line support media such as tape and removing from the system.

Basic Financial Integrator

Also known as BFI. A subset of AFI used to make standard postings to the General Ledger when AFI is inactive. Postings made by BFI cannot be tailored by the user. It is used for postings from Sales Order Processing and Service Management.

BFI

Basic Financial Integrator. A subset of AFI used to make standard postings to the General Ledger when AFI is inactive. Postings made by BFI cannot be tailored by the user. It is used for postings from Sales Order Processing and Service Management.

Consolidation

The accumulation of values from more than one source transaction to create a single posting to the General Ledger. Note that consolidation for ABC is done within the ABC Module; the AFI features have no effect.

Consolidation Control Field

A data field based on which consolidation is to take place.

Control Accounts

General Ledger accounts to which direct posting is normally inhibited.

Data Conversion Codes

These specify how data from the source Module will be converted to different values when generating account codes.

Default Account

A General Ledger account which must be specified on a posting definition and which will be used for postings where no account code rule is used, or the rule fails to generate a valid account.

Interface

A link which enables data created in one Module to be passed to another.

Journal Condition

The overall journal definition, and the circumstances under which a journal is created.

Post Inhibit

A setting made against a General Ledger account code to indicate that direct postings are not allowed.

Posting Definition

The definition of each posting which is to be made to the General Ledger.

Purge

To remove data from the system.

Session Number

The means to identify a group of transactions, usually created at the same time, i.e. a batch of sales invoices.

Source Module (Application)

The source of the data which is extracted by AFI to create postings to the General Ledger or ABC.

Standard Interface

An interface provided as part of the supplied AFI product.

Suspense Account

A General Ledger account code which must be set up and specified for the Module. When the journal postings for a transaction fail to balance, balancing postings is made to this account.

System Manager

The software functions which control the Module environment which make up the System Manager.

Target Module (Application)

Journal transactions created in AFI can be posted to General Ledger or to Advanced Business Costing.

Template

Used to define an account code level structure when a structure is required which is different to that defined in your General Ledger.
