Chapter 5

Print Reports

Print Reports Overview

This is the most frequently taken option because it involves the generating and printing of the reports that have been maintained on the system.

Report Print

This procedure is used to print financial management reports which have been defined to the system. It also offers you the opportunity of temporarily changing some of the report specifications at run time.

The financial values selected for printing are the base values held on your General Ledger. They may be translated by this procedure into equivalent values in another currency.

Select the option Print Reports and the next selection screen is displayed.

RW140		E1 - Demonstration Company		USER ED3	6/01/94 14:07:27
Select Reports					
Report or group name	Description	LAST Date	RUN Per'd	1	
DEMO	Demonstration Report	0/00/00		1	
PLREPORT	Profit & Loss Report	4/01/94	93-11	-	
PLVIEW	Profit & Loss by View Div/CC/Account	6/01/94	93-11	-	
Period . . . : 9312 Budget 1 . ? : <u>BU1</u> 1 Currency . ? : <u>GBP</u> Rate code . . . ? : <u>PERD</u> Budget 2 . ? : <u>FCI</u> 0 Rate : _____ Override compressed printing? . : 2 (0=Override to no, 1=Override to yes, Override landscape printing? . : 2 2=Do not override) 1=Select F3=Exit F4=Prompt					

A list of all the reports which you are authorised to use is provided in the top half of the screen. The data and period the report was last printed is also shown.

Enter a 1 against each report you want to print.

Note: The list may include report groups. It would be unusual to print a report group and reports within the group.

Enter also:

Fields:

Period

The report will, by default, be printed for the current General Ledger period. This can be changed to any other period, before or after the current period.

Budget 1

Enter the budget codes and types to be used if budgets 1 and 2 are used in the report specification (i.e. in a data dictionary field used by report formats).

Budget 1 Type

Enter the budget codes and types to be used if budgets 1 and 2 are used in the report specification (i.e. in a data dictionary field used by report formats).

Currency

Enter a currency code if translation of base currency values is required.

Rate Code

Enter the rate code to be used for translation.

Budget 2

Enter the budget codes and types to be used if budgets 1 and 2 are used in the report specification (i.e. in a data dictionary field used by report formats).

Budget 2 Types

Enter the budget codes and types to be used if budgets 1 and 2 are used in the report specification (i.e. in a data dictionary field used by report formats).

Rate

Enter an exchange rate (multiply or divide) by which this company's values are translated into a target currency.

Rate Modifier

Enter M if the rate is to multiply. Enter D if the rate is to divide.

Override Compressed Printing?

Enter one of the following options:

- 0 - You do want compressed printing.
- 1 - You do not want compressed printing.
- 2 - You want to defer to the default setting for this as set up when the report was defined.

Override Landscape Printing?

Enter one of the following options:

- 0 - You do want landscape printing.
- 1 - You do not want landscape printing.
- 2 - You want to defer to the default setting for this as set up when the report was defined.

Once you have entered the necessary details, press **Enter** to move on to the confirmation screen.

Select Reports Confirmation Screen

RW140		E1 - Demonstration Company		USER ED3	6/01/94 14:13:06
Select Reports					
Report or group name	Description	Modi fy?			
DEMO	Demonstration Report	<u>1</u>			
Period . . . 93-12					
Budget 1 . . . BU1 1	Currency . . GBP	Rate code			
Budget 2 . . . FC1 0		Rate 1.00000 M			
Override compressed printing? . : 2 (0=Override to no, 1=Override to yes,					
Override landscape printing? . : 2 2=Do not override)					
F3=Exit F8=Print reports F12=Previous					

The Select Reports screen displays the report details for you to check before you continue and submit them for printing. There is one input field:

Fields:

Modify?

Enter a 1 against a report you want to modify. The system will then access the first view or group of accounts used in the report for you to modify.

If all the details are correct, press **F8=Print Reports** to generate the report(s).

The system returns you to the Financial Manager Initial Menu and displays a message at the bottom of the screen telling you the report has been submitted for processing.

Run Time Modifiers

Run time modifiers are used to generate further reports based on the first generated report for the purposes of comparison.

You can specify a more limited range of modifiers at the time you run the report. The run time modifier allows you to modify account levels within the first account group or view defined to the report.

Unlike the format modifiers which are entered when defining the report, run time modified values are not printed on the same report as the set delimiting parameters on which they are based; instead, the modified values will be printed on subsequent reports.

From the Select Reports screen enter a 1 in the Modify field against the report(s) you want to modify. Press **Enter** and Specify Sector Modifier window is displayed.

RM140 E1 - Demonstration Company USER ED3 6/01/94 14:13:06

Select Reports

Specify Sector Modifier

Report.... DEMO

Ledger.... P/L PROFIT & LOSS LEDGER

View..... 1--- -- Standard key description

y?

Level	Description	Modifier
1	Account Type.....?	*****

F4=Prompt F8=Confirm F12=Previous

Budget 2 . . . FC1 0 Rate 1.00000 M

Override compressed printing? . : 2 (0=Override to no, 1=Override to yes,

Override landscape printing? . : 2 2=Do not override)

F3=Exit F8=Print reports F12=Previous

The window displays a list of the levels belonging to the first account selection or view it finds. The descriptions given to each of those levels and input fields are tailored to the particular length of each level.

Enter a modification value in one of the level fields and press **F8=Confirm** to confirm your entry. The system takes you back to the Select Reports menu and the report(s) you have modified are flagged with a 1.

Warning: It is advisable to ensure that the structure and number of your 'standard' accounts is the same as that of your modified accounts. If there are modified accounts which do not exist in the standard account code's structure, they will not be printed.

Note: You can enter partial level modifiers,

whereby you can modify one or more of the characters in a specific level while leaving the other characters as asterisks.

Note: You can enter modifications to more than one level.

Note: You can go back and modify a report at any time. The modified levels will still retain the changes you have made.

Rounding Figures

The system calculates the totals on reports by calculating from figures printed in the columns of the report, rather than from the figures which exist as data on the General Ledger.

For example, figures in report columns which you have specified to be rounded down to the nearest digit, will be totalled by the system without decimal places, and their total printed at the base of the report. Any values after the decimal point will be ignored both for individual figures in the report columns and for any calculation to be made upon them.
