Chapter 4

Financial Manager Overview

Introduction

This system has been developed to satisfy growing customer requirements and take full advantage of constant advances in technology with a family of high quality software products; products which combine innovative and advanced techniques with practical and pragmatic facilities and will solve a wide range of business problems quickly and easily.

- Financial Manager is completely integrated with the other Financial, Logistic and Customer Service applications
- A comprehensive system-defined data dictionary is included
- You can define your own report fields and formats.
- You can calculate values using accumulators and calculated fields
- Work fields are available for 'hidden' calculations
- Report formats can be modified at set up or run stage
- You can access General Ledger data from single accounts, account groups and user-defined views
- Report authorities can be strictly monitored
- You can perform inter-company copies of data dictionaries, formats and report definitions

Application Environment

Broadly addressing the needs of production, distribution and financial management, the range of applications is illustrated below:

Financial Management is a suite of comprehensive and fully integrated applications which may be considered as a single financial management tool. It addresses specific business functions (such as debtor management) within a common framework. At its heart lies the General Ledger, collecting, organising and analysing all your company's financial information.

This application is designed to present information which is relevant, timely and accurate so as to support your operational procedures and your executive decisions within a framework which fully conforms to international statutory and legal reporting and audit requirements.
