Chapter 6

Budgets Processing

Introduction To GL Budgets Processing

Generally speaking, the Budgets Maintenance options enable you to define the rules according to which budgets should be created, while the Budgets Processing options submit the jobs which actually create the budgets.

The first of the options enables you to create a budget without first creating a rule, and may be the method you use to create the first budgets on your system, before going on to the more flexible rule-based budget creation options. A report of a budget can be produced using the Budgets reports options.

The total budget entry options use a spread rule to create budgets using variance analysis, but stop the job during creation to enable you to review the recommended figures.

The rule processing options correspond to the rule definition options in the Budgets Maintenance options. The processing options submit a job to create the budgets using the relevant rule.

The data warehouse upload option performs a similar task for the data warehouse upload rule defined in the Budgets Maintenance options.

The first of the utility options, Calculate Ledger Budgets, calculates the budget for a sub-ledger control account, based on the budgets for the accounts in the sub-ledger.

The second utility, Rebuild User-Defined Budgets, calculates the budgets for high-level views based on user-defined links.

Budgets Entry

Select the Budgets processing option (Period Budget Entry). The selection screen displays.

1/GLF

This procedure allows you to create a budget or a forecast for any year.

The processing is the same for both budgets and forecasts.

Budgets Maintenance - Standard View

If you select the standard view as the view against which you will enter budgets, the appearance of the budget entry screen changes.

Note: If you have no user-defined views for the ledger you must enter budgets against the standard key. In this case the select key window is not shown, and the next screen displays.

If you did not choose automatic sequencing, you will be required to select an account. Otherwise, this screen is not shown and the account for which you will enter a budget is chosen for you.

Enter the account code for which you wish to budget.

Enter the budget or forecast details.

Hierarchy Budgets

If this account is part of a hierarchy, and if the hierarchy requires that budgets or forecasts be accumulated, the hierarchy values are accumulated with no intervention. This process is carried out as a batch job when you have completed the entry of budgets or forecasts.

GL107	Y6 - Education Company - Y6	USER FFV6	31/07/95 15:11:09
Maintain Budgets & Forecasts			
Budget Code & Type . . . ?	01 1	0=Base forecast 1=Base budget 2=Quantity forecast 3=Quantity budget 4=Currency forecast 5=Currency budget	
Ledger ?	___		
Year :	94 1	(1=Fiscal, 2=Alternative)	
Automatic Sequencing? . . :	0	(0/1)	
F3=Exit F4=Prompt 05-30 SF ML KS IM II KENB20A PCET02S1			

Fields:

Budget Code

Enter a budget code of up to three characters in length.

Budget Type

Enter the type of the budget:

- 0 - Base forecast.
- 1 - Base budget.
- 2 - Quantity forecast.
- 3 - Quantity budget.
- 4 - Currency forecast.
- 5 - Currency budget.

Note: If this budget or forecast code and type have not yet been set up, a window displays, allowing you to create them.

Ledger

Enter the code of the ledger for which budgets/forecasts are to be maintained.

The ledger must be set up on the chart of accounts.

Year

Enter the year the budget is to be created for.

Year Type

- 1 - Fiscal year.
- 2 - Alternative year.

The start period will be obtained from the company profile.

Automatic Sequencing

- 0 - To select accounts to be processed manually.
- 1 - To process accounts by bringing them up automatically in alphanumeric sequence.

With careful preparation, a great deal of time can be saved entering budgets in this way. By printing a sequential list of account codes with annual budgets and spread profiles written by the side, you will then only need to enter the first account code. The system will automatically give you the next account, and all you have to enter is the annual budget and spread profile.

- If you opt to maintain a currency budget or forecast, further fields are displayed at the base of the screen where you must enter currency details.
- If you are not maintaining a currency budget or forecast the currency details are not displayed and you are taken to the Select User-defined View stage.

Press **Enter** to go to the next step.

Budgets And Forecasts User-defined View Screen

 To display this screen press **Enter** at the first Budgets Entry screen.

Enter currency, rate code details and prime and base currency details for the view.

GL107	Y6 - Education Company - Y6	USER FFV6	31/07/95 15:21:53

Roll Prime Budgets into Base Budgets? . . :	0	(0/1)	
F3=Exit F4=Prompt F12=Previous 18-46 SF MM KS IM II KENB20A PCET02S1			

Fields:

Currency

Enter a valid currency code for this budget or forecast. The budget or forecast will hold values in this prime currency and in the company's base currency separately, and they will appear separately in printouts.

You can enter as many prime currencies for a budget or forecast as you like.

Rate Code For Prime To Base

Enter a rate code for converting this prime currency to the company's base currency. This field cannot be used if the Rate field is used.

Rate

Enter an exchange rate for the conversion of prime to base currency, and the letter D or M depending upon whether you want to divide or multiply by the rate. This field cannot be used if the Rate Code field is used.

 Press **Enter** to go on to the next screen.

Select User-defined View Key Window

 To display this screen press **Enter** at the first Budgets Entry screen.

If you did not choose automatic sequencing on the first screen, the first Official Budgets screen will now be displayed to enable you to select the account for which you want to enter a budget. Otherwise, this screen is not shown, and the account selection is done automatically.

Select the user-defined view you wish to use for budgeting or forecasting purposes.

The screenshot shows a terminal window titled 'Maintain Budgets & Forecasts'. At the top, it displays 'GL107', 'Y6 - Education Company - Y6', 'USER FFY6', and the date/time '31/07/95 15:22:33'. Below the title, it says 'Bu' and 'Select User Defined key'. The main area shows a list of keys with descriptions: '123456789 Key description', '1--- -- Standard key description', '--- 1 -- Division', '--- 12-- Division/Cost Centre', and '3--- 12-- Division/Cost Centre/Account Type'. To the right of the list is a 'More' button. At the bottom of the window, it says 'F12=Previous'. The bottom status bar shows '10-08', 'SP', 'MW', 'KS', 'IM', 'II', 'KENB20A', and 'PCET02S1'.

Select a user-defined view by entering 1 against the line.

 Select the view and press **Enter**.

Official Budgets Screen 1

To display this screen press **Enter** at the Select User-Defined View Key window

The levels for the view display on the screen. You must enter level codes to form an account, and you may prompt on each level.

If, for the ledger being processed, each active level in the range 1 to 4 is in the selected view, these levels must combine to form a valid entry in the chart of accounts.

GL107	Y6 - Education Company - Y6	USER FFV6	31/07/95 15:25:07

Account.?:			
F3=Exit F4=Prompt F12=Previous			
05-12 SP MM KS IM II KENB20A PCET02S1			

Select an account for the official budget.

Once you have completed the entries, press **Enter** to continue and the Official Budgets Screen displays.

Official Budgets Screen 2

Press **Enter** at the first Official Budgets Screen to display this screen.

At this screen enter the budget values against each period or enter a spread profile to spread the values.

Once a valid budget value has been accepted, the system will:

- Call up the next account within the ledger if automatic sequencing has been selected. When the system has called the last valid account, the selection screen is redisplayed.
- Allow you to enter a new account of your choice if automatic sequencing has not been selected.

A currency budget or forecast can have many currencies attached to it. When a report is printed you will see the currencies listed in turn with the base value beneath each one.

Spread profile . . . ?			
F3=Exit F4=Prompt F12=Previous			
21-27 SF MM KS IM II KENB20A PCET02S1			

Fields:

Period Values

Where you are not using a spread profile you must enter a value against periods. The sum of the period values must equal the annual value.

Annual Budget

The annual budget must be the sum of the period values if they are entered individually or the total value to which the spread profile is applied.

Spread Profile

Enter the spread profile code of up to 3 characters in length.

Note: The system will spread rounding differences across periods rather than posting it all into one period giving skewed results.

Press **Enter**. If a spread profile is used, the screen displays the result of the calculations. You can amend the calculated budget or forecast values.

Create Total Entry Run

11/GLF

Select the Create Total Entry Run option to see the Rule Selection screen.

The total entry facility, which consists of two Budgets Processing options to enable you to create revised forecasts.

You can compare your actuals to an existing budget, and to create a new budget based on the variance.

This, the first option of the two, takes the actuals and the budget specified, calculates the variance, and recommends a new budget.

The second option allows you to review and change the recommendations.

The recommendation is made as a total figure for a selected period range. Once accepted, it is spread across that period range using a spread rule. The spread rule is used twice in total entry:

- To specify the target account range.
- To spread the total value over the target periods.

Spread Rule

Enter the existing spread rule which is to be used for two main purposes:

To provide the range of accounts for which variance calculations are to be made and for which budgets will be created.

To provide the spread ratio used to spread the totals entered over the selected period range.

Select the rule and press **Enter** to see the Total Budget Entry screen.

Total Budget Entry Screen

Select a rule and press **Enter** at the Total Budget Entry selection screen.

At this screen select the definitions for the job submission which will calculate the variances and recommend budgets.

GL631	Y6 - Education Company - Y6	USER FFV6	31/07/95 15:43:46

F3=Exit	F4=Prompt	F8=Submit	F12=Previous
07-25	SF	ML	KS
		IM	II KENB20A PCET02S1

Fields:

Target Budget

Enter the code for the budget to be created.

Type

Enter the type of budget entered. This will be one of the following:

- 0 - Base forecast.
- 1 - Base budget.
- 2 - Quantity forecast.
- 3 - Quantity budget.
- 4 - Currency forecast.
- 5 - Currency budget.

Currency

If the type is 4 or 5, enter the currency for the target budget.

Code

If the type is 4 or 5, enter the currency conversion rate code to convert prime budgets to base.

Target Year

The new budgets can be created either for the current system year, or for the year following the system current year.

Enter the year for which you want to create budgets.

If you enter next year, the value in the Period Range field must be 01, as actuals will not be available.

Target Period Range

The entry in this field defines the periods for which the new budget will be generated.

If, for example, you enter 07 here, the actuals/budget comparison will be made over periods 01 - 06, and the new budget figures will be created for periods 07 - 12.

This field must be set to 01 if next year is selected as the target year.

Prior Year Actuals

This field specifies whether the actuals used in the variance analysis are from this year or last year.

0 - This year.

1 - Last year.

Source Budget

Enter the budget to be used as the source. The figures from this budget will be compared to the actuals to produce the variance figures. The default of blank means that the target is to be used as the source.

Projection Method

Enter one of the three following methods:

1 - Do not alter the current budget.

2 - Adjust for variance.

3 - Assume current percentage variance will continue.

Typically, the method used will depend on the type of account. An underspent expense account would be projected to continue underspending (method 3), while an overspent one would be projected to come back to target (method 2).

See section Maintain Total Entry Run for an example of the way in which the projection method works.

Rounding Rule

Enter one of the following:

0 - Display to nearest unit.

1 - Display to nearest ten.

2 - Display to nearest hundred.

3 - Display to nearest thousand.

4 - Display to nearest ten thousand.

The entry in this field defines the format of the variance figures displayed in the Maintain Total Entry Run option. It has no effect on the calculation of the recommended budgets.

Define the details of the run, press **F8=Update** to submit the job which will calculate the variances and recommend budgets.

Maintain Total Entry Run

12/GLF

The total entry facility, which consists of two Budgets Processing options, enables you to compare your actuals to an existing budget, and, depending on the variance, to maintain the new budget either to recover or to continue this variance.

This second option:

- Displays the variance figures calculated by the Create option.
- Displays and allows you to maintain the total which is to be spread across the target periods.
- Submits a job to spread the total across the target periods, using the ratio provided by the spread rule.

Select the Maintain Total Entry Run option (Budgets Processing). A list of runs displays. Enter 1 against the run you wish to maintain or submit.

Select the run to display a screen listing available accounts.

Sel

Enter 1 against any account for which you want a budget created in the submitted job.

Tip: Any account for which you amend the total will be automatically selected.

Tip: Any selected account can be de-selected by blanking out the select field.

Ytd Actual

The Year-to-date Actual field displays the total of the actuals in the period range selected to provide actual figures.

Ytd Src Budget

The Year-to-date Source Budget field displays the total of the budget figures over the period range selected to provide the actuals.

Target Bud Src Remain

This field displays the total of the source budget values in the target period range.

Projected

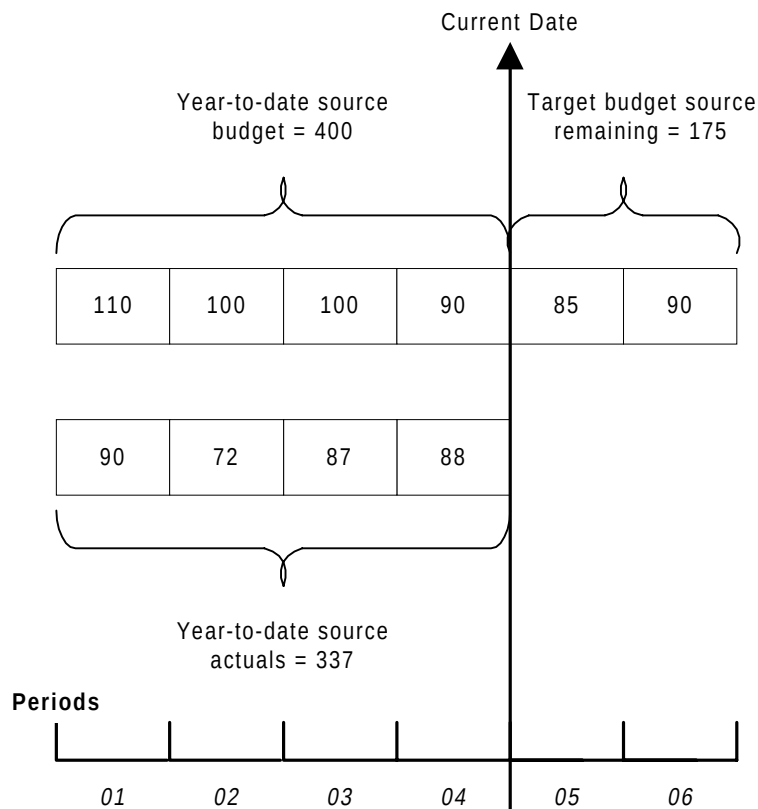

This field initially displays the results of the calculations performed by the Create option. If these figures are left unamended, they will be transferred to the target budgets.

If you wish to amend the figures, enter the new values in the field. The accounts amended in this way will automatically be selected for the submitted job.

The following diagram illustrates the calculation

process:

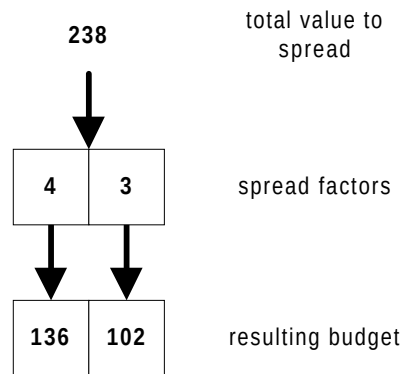

The projected value, calculated by the Create option, will depend on the projection method chosen when that option was run. The three possible results are shown here:

Projection Method	Calculation	Result
1 - Do not alter current budget	$85 + 90$	175
2 - Adjust for variance	$400 - 337 + 175$	238
3 - Assume variance will continue	$\frac{175 \times 337}{400}$	147.44

Spreading the total

If you decide not to alter the total of, for example, 238 shown above, this becomes the total value to be spread into the new budget when you press **F8=Update** to update. The spread ratio is taken from the spread rule, and can be a spread profile or a budget. The following example shows what happens:

Functions:

F8

Submit. Submit a job to create the budgets.

F13

Display the Create definitions you entered for this run.

F15

Position the list to a selected account.

F17

Select all the accounts to have their budgets created.

F21

If you have made several amendments but wish to leave your work before returning to complete the work, press **F21**. The system will remember the changes you have made, and return you to the menu. When you select the run again, you can continue your work from the point at which you left it.

F22

Toggle between the display of the value fields and the display of the full account or user-defined view.

Rule Processing

The rule processing options correspond to the same rule definition options as the Budgets Maintenance options. The processing options submit a job to create the budgets using the relevant rule.

Select the following four budget creation options:

- Budget Generation.
- Budget Apportionment.
- Budget Spreading.
- Warehouse to Budget Transfer Rules.

Budget Generation

21/GLF

When you have defined your budget generation rule, use this option to submit a job to create the budgets.

Budget Generation Select Screen

-  Select the Budget Generation option (Rule Processing) and enter the rule you wish to process.
-  Press **Enter** to go to the Budget Generation Submit screen.

Budget Generation Submit Screen

Select a rule and press **Enter** to display this screen.

Enter the details of generating the budget and submit for processing. The specified budget will be created. The job will produce an audit report and a listing of any errors occurring.

GL614	Y6 - Education Company - Y6	User FFY6	31/07/95 15:39:15
Budget Generation - Submit

F3=Exit F4=Prompt F8=Submit F12=Previous			
00-20 SP MM KS IM II KENB20A PCET02S1			

Target Budget

Enter the code of the budget which the job is to put its target figures into. This will be the same for each target account.

Type

Enter one of the following types of target budget:

- 0 - Base forecast.
- 1 - Base budget.
- 2 - Quantity forecast.
- 3 - Quantity budget.
- 4 - Currency forecast.
- 5 - Currency budget.

Currency

If the type is 4 or 5, enter the budget currency code.

Code

The currency rate code is used for two purposes:

Prime to base conversion of a currency budget.

Base to base conversion if the source and target companies have different base currencies.

A rate code must be entered, but defaults to the company default.

Target Year

Enter the year for which the budgets are to be created.

Target Period Range

Enter the range of periods for which the budgets are to be created.

Use Budgets From Period

If you want to create your budgets using actual values from the target accounts for the first four (for example) periods of the year, then switching to using the specified source for the rest of the year, enter 05 in this field.

To base all budgets on actuals enter 00; to base all budgets on the source budget enter the From value in the target period range.

Source Year

Enter the year to use for the source values, whether they are actuals or budget figures.

Source Budget

This field will default to the source budget specified in the Source Budget field in rule definition, but it can be changed. This will be the source budget for all source accounts.

Type

Enter the budget type of the source budget. See the text for the target budget source above for a list of possible types.

Currency

If the type is 4 or 5, enter the source budget currency code, if relevant.

Fixed Factor

To increase or decrease a value by a set factor before it is transferred to the target budget, enter that factor here. The field defaults to 1, which leaves the values unchanged. Enter 1.1, for example, to increase each value by 10%.

Multiply/Divide

Enter * to multiply by the factor, / to divide by the factor.

Complete the entries, press **F8=Update** to submit the job for processing.

Budget Apportionment

22/GLF

Define your budget apportionment rule and enter this option to submit a job to create the budgets themselves. The job will produce an audit report.

Select the rule processing option Budget Apportionment and enter the rule you wish to process. Press **Enter** to go to the Budget Apportionment Submit screen:

GL614	Y6 - Education Company - Y6	User FFY6	31/07/95 15:40:20
Budget Apportionment - Submit			
Rule. RULE2		Second Rule	
Target budget ? █		Type. . _	Currency. . ? _

Ratio source year _			
F3=Exit F4=Prompt F8=Submit F12=Previous			
00-20 SP MW KS IM II KENB20A PCET02S1			

Target Budget

Enter the code of the budget which the job is to put its target figures into. This will be the same for each target account.

Type

Enter the type of target budget. This will be one of the following:

- 0 - Base forecast.
- 1 - Base budget.
- 2 - Quantity forecast.
- 3 - Quantity budget.
- 4 - Currency forecast.
- 5 - Currency budget.

Currency

If the type is 4 or 5, enter the budget currency code.

Code

The currency rate code is used for two purposes:

Prime to base conversion of a currency budget.

Base to base conversion if the source and target companies have different base currencies.

A rate code must be entered, but defaults to the company default.

Target Year

Enter the year for which the budgets are to be created.

Ratio Source Year

Enter the year from which the ratio figures are to be taken.

Ratio On Source Budget

Enter the budget which is to supply the ratio figures. This field will default to the budget entered as the Ratio On Source Budget in the rule definition. This field is shown only if the rule specified the use of a ratio on budgets.

Type

Enter the type of ratio source budget. See the text for the target budget type above for possible entries here. This field is shown only if the rule specified the use of a ratio on budgets.

Currency

If the type is 4 or 5, enter the budget currency code. This field is shown only if the rule specified the use of a ratio on budgets.

Complete the entries, press **F8=Update** and your selected rule will be used to create the specified budget.

Budget Spreading

23/GLF

Define your budget spreading rule and use this option to submit a job to spread the selected budgets.

Note: This option simply spreads the existing values into different proportions across the range of periods. The total value of the budget will not change.

Select the Budget Spreading option (Rule Processing), and enter the rule you wish to process. Press **Enter** to go to the Budget Spread Submit screen:

GL614	Y6 - Education Company - Y6	User FFY6	31/07/95 15:42:26

08-28 SF MK KS IM II KENB20A PCET02S1			

Target Budget

Enter the code of the budget which the job is to re-spread.

Type

Enter the type of the budget. This will be one of the following:

- 0 - Base forecast.
- 1 - Base budget.
- 2 - Quantity forecast.
- 3 - Quantity budget.
- 4 - Currency forecast.
- 5 - Currency budget.

Currency

If the type is 4 or 5, enter the relevant currency.

Code

The currency rate code is used for two purposes:

Prime to base conversion of a currency budget.

Base to base conversion if the source and target companies have different base currencies.

A rate code must be entered or the company default. code will be used.

Target Year

Enter the year for which the budgets are to be spread.

Target Period Range

Enter the range of periods over which the budgets are to be spread.

Spread Source Year

Enter the year from which the spread ratios will be determined. This field is not displayed if the spread rule specifies the use of a spread profile.

Spread Budget

Enter the budget to supply the spread ratios. This field is not displayed if the spread rule specifies the use of a spread profile, or spreads by actual value, or quantity.

Type

Enter the type for the spread budget. See the target budget type above for valid types. This field is not displayed if the spread rule specifies the use of a spread profile, or spreads by actual value, or quantity.

Currency

If the type is 4 or 5, enter the relevant currency. This field is not displayed if the spread rule specifies the use of a spread profile, or spreads by actual value, or quantity.

When you have completed the entries, press **F8=Update** and the rule you have selected will be used to modify the specified budget. The job will produce an audit report and a listing of any errors that occurred.

PC Uplift Budgets

31/GLF

Use this option to post budgets to user defined views.

Once you have defined your transfer rule using the PC Uplift Budgets Rule Maintenance option, this option submits a job to transfer the data itself.

Note: For a detailed explanation of the PC uplift feature, refer to the PC Uplift Budgets Rule Maintenance section.

Select the budgets processing option PC Uplift Budgets.

As explained in the PC Uplift Budgets Rule Maintenance section of Budgets Maintenance, spreadsheets from your PC are stored as worksheets on your main computer.

The screen you see displays the following fields.

Fields:

Worksheet

Enter the name of the worksheet (spreadsheet) to be transferred.

Data Cube

You will only see this field if you are using Viewfinder in preference to the PC uplift feature.

Enter the name of the data cube in which the worksheet is stored.

Data Warehouse

You will only see this field if you are using Viewfinder in preference to the PC uplift feature.

Enter the name of the data warehouse in which the data cube is stored.

Rule

Enter the rule which is to govern the transfer of the data.

This rule must have been set up already in the PC Uplift Budgets Rule Maintenance option.

Test Mode

0 - To run the complete job, which will transfer the data and produce an audit report of the results.

1 - If you want to produce the report for test purposes, but do not want the data transfer itself to take place.

Note: The job validates all the General Ledger accounts specified on your spreadsheet. If any are found to be invalid, the job produces an

exception report and performs no updates. In this case, you will need to modify your spreadsheet on your PC and uplift it again via the PC uplift feature before re-submitting this job.

Press **F8=Update** to submit the job.

Budgets Report

1... 2... 41/GLF

This option will print a report, sequenced by account number within user-defined view, showing the budget figures for each period for each account.

Select the Budgets processing option (Reports) to see the Print User-Defined Budgets screen.

```

F3=Exit F4=Prompt F15=Select all F16=De-select all
21-32 SF MM KS IM II KENB20A PCET02S1
  
```

Enter 1 against any user-defined view which you want to include in the report. Select as many as you wish. Press **F15=Select All** to select all the views, **F16=De-Select All** to deselect them.

*Note: Enter 1 and the number is automatically transferred to the space beside the selection field, so there is no need to press **Enter** for each one.*

When you have made your selections, press **F8=Update**. The Print User-Defined Budgets window will be displayed.

Calculate Ledger Budgets

The budget for a sub-ledger control account is calculated by this procedure. It is used to ensure that the budget and forecast figures established in a sub-ledger are reflected in the sub-ledger control account.

By accumulating the budget of the accounts in the sub-ledger into the budget for the control account, this function provides an alternative to entering budgets directly at control account level.

Such calculations cannot be made for the two top level ledgers because they will have no control accounts above them into which they can 'feed' values.

The calculated value will replace any values you may have entered for the control account itself.

Budgets are only calculated for the selected ledger and are not automatically generated throughout the higher levels of a sub-ledger structure until the top level ledger is reached.

If you leave the ledger blank to calculate budgets for all ledgers, then ledger budgets will automatically be calculated from the bottom up.

Budgets for hierarchy control accounts are created automatically as budgets are entered for child accounts, if this was requested when the hierarchy was defined. Budgets will roll automatically through a multi-level hierarchy.

Budgets for views at a higher level than the entry view can be created automatically using the User-Defined Links Maintenance option.

Calculating Ledger Budgets Screen

Select the processing option to Calculate Ledger Budgets.

Select the ledger, budget code, budget code type and the year and report type. The budget will be calculated and a report produced.

F3=Exit F4=Prompt 05-22 SF MK KS IM II KENB20A PCET02S1			

Fields:

Ledger

Enter a sub-ledger code.

Leave blank to accept all sub-ledger codes.

Budget Code/Type

Enter a budget code and type.

Leave blank to accept all budget codes

Year

Enter the year for which calculations are to be made.

1 - To perform the calculations for a fiscal year.

2 - To perform the calculations for an alternative year.

Print Report

0 - Do not print a report detailing the calculations made.

1 - Print a report detailing the calculations made.

Press **Enter** and then **F8=Update** to confirm.

User-Defined Budgets

Two GL user-defined menu options are available as:

- Rebuild User-Defined Budget (budget processing option).
- User-Defined Balances Transaction Report.

Rebuild User-Defined Budgets

52/GLF

Budgets or forecasts entered for a low level view will update budgets or forecasts of higher level views, where a user-defined link has been defined.

If you have entered values for a high level view which is linked to a lower level view, you will override the calculated values, causing inconsistencies in your budgets.

The rebuild facility will overwrite budget values in high level views and replace them with values based on lower level views.

Rebuild User-Defined Budgets Selection Screen

Select the Rebuild User-defined Budgets option to proceed to the Rebuild User-Defined Budgets screen:

The screen displays a list of the user-defined views selected as higher level views in the user-defined links option.

```

```

Fields:

Select

0 - To remove the selection flag previously entered against a view.

1 - To select one or more views.

Functions:

F15

Allows you to select all the views.

F16

Removes the selection flag against all views which have been selected.

The views are listed in ledger order. You can position the list to the appropriate ledger by entering the ledger's name in the Position To field.

Having selected a view or views press **Enter** to proceed to the final step.

Rebuild Budgets Window

- ➡ To display this window, select a view or views at the Rebuild User-Defined Budgets screen and press **Enter** to proceed to the final step.

Select the periods for which the rebuild is to take effect.

Fields:

Period Range

Enter the range of periods over which you wish the rebuild to take place.

- ➡ Press **F8=Update** to accept and perform the rebuild.

User-Defined Balances

33/GLE

Select the GL transaction reports option User-Defined Balances. The first enquiry selection screen displays.

This procedure prints a report of account balances based on a range of user-defined views. You can include budgets information and a range of group codes may also be specified for single view reports.

The screen displays a list of your company ledgers and their available views.

1(Select)

1 - Select a view to appear in the report. Any number of views may be selected. When you enter 1 against a view, it will be flagged with 1.

0 - De-select. Allows you to remove the selected flag from any view which has already been selected.

Position To Ledger

You can position the list of views to the ledger you enter in this field.

Functions:

F15

Allows you to select all the views displayed on the screen to appear in the report. They will all be flagged with 1 indicating they have been selected.

F16

Allows you to de-select all the views which have been previously selected to appear in the report. The flag settings of 1 against them will disappear.

Press **F8=Update** and the user-defined balances window displays.

Print User-Defined Balances Window

 This window displays when the User-Defined Balances Report selection screen is completed and **F8=Confirm** to confirm has been selected.

Define the report from the details displayed. A batch job will be submitted and the report produced.

```

Fields:

Period Range

Enter the range of periods for which balances are to be reported on. Format YYPP year - period number.

Report Format

- 1 - Actuals. Produces a report excluding budget information.
- 2 - Budgets vs. actuals. Produces a report comparing actual versus budget information.

Budget Code

 Complete this field only if the level of detail (selected at the next item) is 2.

Enter the budget code and type of budget you wish to display in the report. It must be an existing budget.

Level Of Detail

- 1 - Include transaction details.

If the view contains the full fiscal account code. A report is produced which prints the transaction details for the period(s) selected and includes the year-to-date balance information. No transactions are shown for sub-ledger, control or memorandum

accounts. The inclusion of transaction detail is controlled by the summarise postings flag set at account level. See also the Include Control Account Transactions item in this section.

Note: See also the Summarise Postings options in Accounts Maintenance - Extensions Levels

If the view does not contain the full fiscal account code. Postings for memorandum accounts will also be included. No transactions are shown for sub-ledger control accounts, or hierarchy control accounts (as none are posted directly). Year to date balances will include values for these accounts.

2 - Summary report with subtotals.

Note: This report type is the French Statutory Trial Balance report and should be printed for the standard view in the Balance Sheet or Profit & Loss ledgers - although other views may be reported.

Note: The report will only print balances for top-level ledgers - that is, ledger types 1 or 2.

Note: If run for the standard view, memorandum account balances will be excluded and sub-ledger control account balances included. For other views, all balances including Memorandum account balances will be included.

3 - Summary report without subtotals.

This is a summarised version of Report type 1 showing period totals only. Includes balance information summarised by period for the range of periods selected. For each period year to date and net cumulative year to date balances are included.

Note: The Include Control Account Transactions option is not applicable.

Include Ctl Account Transactions

1 - Include your debtor/creditor control account transaction details in the report being selected.

0 - Do not include control account transactions.

From Group

To Group

Enter the range of group codes you wish to display in the report. Leave blank to include all group codes.

The level code numbers which make up the group code structure are displayed beneath the input lines.

Tip: The full group structure should be entered and no gaps should be left between levels.

Note: The level code numbers which make up the group code structure are displayed beneath the input lines.

If only one view has been selected for the report, the two range fields at the base of the screen are displayed. If more than one view is to be printed, the option to use these two fields is not possible, and they will not appear on the screen.

Press **Enter** to accept the report parameters. A batch job will be submitted to produce the report.
