Chapter 13

Company Maintenance And Other Utilities

Introduction To Company Maintenance And Other GL Utilities

To access the company options and other utility facilities select the GL utilities options.

Options included are create, save, restore, delete and maintain your companies; chart of accounts can be rebuilt and balance data can be verified and rebuilt. Miscellaneous options include Maintain Country-Specific Parameters which enables you to select options specific to your company's country.

Utilities Introduction

The General Ledger module provides a number of utilities for database reorganisation and verification. These utilities are not required during normal operation.

Warning: All the procedures which are provided here require great care and some a detailed technical understanding of the module. You are recommended to carry out these tasks with the advice of your computer manager and/or software supplier.

The utilities need exclusive use of the General Ledger module, thereby preventing operational use. They are usually performed outside normal working hours.

Archiving enables you to take a security copy of period balance records and transactions before purging them from the computer system. The archived copies may be restored for enquiry and report purposes. (No postings can be made to a restored system.)

- Save company data to an archive file.
- Purge the data from the computer system.
- Restore archived data as and when required.
- Enquire and report on restored archived data.

Delete a company when you no longer need to keep accounts for the company concerned.

Rebuild Balances rebuilds account period balances from the transactions if discrepancies have been found in the verification procedure. These procedures may take a very long time to process if your General Ledger has large data volumes.

Important

The Financials modules maintain balances using hidden programs known as subsystems.

Certain Utilities options also maintain these balances, and if you enter one of these options while a subsystem is active a message prevents you from using the option.

All subsystems must therefore be turned off before such utilities can be used.

Entering Details Of Libraries

Many of the functions contained in this Utilities section ask you to enter the names of certain libraries.

The names of the following libraries are usually required:

Program Library

This is the name of the library containing the Utility programs. This may be left as *LIBL.

GL File Library

This library contains the database files for the module.

Save/Restore Library

A user-defined library used to contain saved data. This is usually a library dedicated to these procedures and must be created before this procedure is run. (See note beginning You must have authority.)

Message Queue

Message Library

The message queue and library default to those for this work station. You may change them to any message queue available on your system, such as the one associated with your user profile.

Work Library

This is the name of a general purpose library to which intermediate files may be copied during certain procedures. You should create a new dedicated library for this task. Once the task has been successfully completed the library should be deleted.

Note: You must have authority to the create library command - CRTLIB - in order to use this function. If you do not have the required authority, an appropriate message displays.

Note: If you are uncertain which libraries apply to your particular system, or you are not authorised to create new libraries, you are strongly advised to consult your computer systems department or your software supplier.

Template Companies

If you need to maintain several companies all in the same way, the easiest way to do this is to set up one General Ledger company and define it as a template company and define all other companies as a group. When you maintain the template company, the related group companies will be updated in the way specified.

Company Maintenance

Two GL utility options are available:

- Create Company.
- Maintain Company.

These facilities will only copy and maintain companies.

New Company

If you wish to create a separate company from scratch, this should be done using the Company Profile Maintenance option.

Create Company

1/GLU

This procedure enables you to create a new company by copying the contents of an existing company. The new company can be created in any library, not just in the same library as the existing company. Only the static data in a company can be copied; the copied data will not include items or balances.

Your existing company may exist in other modules, as well as GL. If you wish to copy data from these other modules too, you will find an equivalent utility option Create.

Order of creating companies:

- Firstly, General Ledger company.
- Then, Cash Management company.
- Copy Accounts Payable and Accounts Receivable in any order.

Warning: If the company being copied is in a different country to the new company, you may have to amend the currency. That is, when the copy is done, you should update the Currency field in the company profile.

Create Company Screen 1

-  Select the utility option to display the initial screen asking you to enter the Copy From and Copy To companies.

Enter the company to be copied and the new company being copied.

```
GL881                Z1 - GB Demonstration Company    User GBJBA1MS      2/12/97
                                                           15:04:27
Create Company

To company . . . . . : M3
Country code . . . . . ? GB
```

F3=Exit F4=Prompt

10-31 SA MW KS CL IM DM II STUD140 KB PKH312S1

-  Press **Enter**, and you are asked to enter a country code for the new company. Press **Enter** again to display screen 2.

Create Company Screen 2

Enter country code and press **Enter** at the first Create Company screen. Press **Enter** again to display screen 2. Enter the country code for the new company. Press **Enter** again to display the following fields.

At this screen select your field options for the new company.

GL881	Z1 - GB Demonstration Company	User GBJBA1MS	2/12/97 15:07:00

Fields:

Account Codes

1 - Copy all account codes from the existing company.

Extended Levels

1 - Copy all extended account levels from the existing company.

Hierarchies

1 - Copy all hierarchies from the existing company.

Currencies

1 - Copy all currency details from the existing company.

Calendar

1 - Copy the calendar from the existing company.

VAT

1 - Copy all VAT details from the existing company.

Pre-Defined Journals

1 - Copy all pre-defined journals from the existing company.

Management Report Formats

1 - Copy all report formats from the existing company.

Consolidation Data

1 - Copy all consolidation data from the existing company.

Inter-Company Accounts

1 - Copy inter-company accounts from the existing company.

Spread Profiles

1 - Copy spread profiles from the existing company.

1099

1 - Copy all 1099 or payment analysis details from the existing company.

Bank Accounts/Miscellaneous Creditors

1 - Copy bank accounts and miscellaneous creditors from the existing company.

Parameters

1 - Copy all parameter codes and definitions from the existing company.

When you have made your selection, press
F8=Update to create the new company.

Warning: The new company will have the same company description as the old one. To change this, select the administration functions option Maintain Company Parameters.

Maintain Company

5/GLU

This option enables you to maintain a single company or a group of companies under a template company.

Note: This option is not a means of maintaining company profile details, which must be done in the Company Profile option.

Select the utilities option Maintain. Enter the company codes of the company to be copied from. Then enter an existing company to be maintained. Press **Enter** to display the maintenance screen.

Maintain Company Screen

At this screen select which of the From company's items are to be applied to the To company.

Enter an existing company to be maintained and press **Enter** to display the Maintain Company screen 2 options.

1 - Copy all report formats from the existing company.

Consolidation Data

1 - Copy all consolidation data from the existing company.

Inter-Company Accounts

1 - Copy inter-company accounts from the existing company.

Spread Profiles

1 - Copy spread profiles from the existing company.

1099

1 - Copy 1099/payment analysis details from existing company.

Bank Accounts/Miscellaneous Creditors

1 - Copy bank accounts and miscellaneous creditors from the existing company.

Parameters

1 - Copy all parameter codes and definitions from the existing company.

When you have made your selection, press
F8=Update to update.

Save A Company

2/GLU

This facility allows you to save a company from the live files library into another library nominated by you. You may save this library to offline media if required.

Warning: The Save Company procedure requires exclusive use of the General Ledger module.

Select the GL utilities option Save A Company.

Enter library names and press **Enter** to display a list of all the companies in the General Ledger. Enter 1 against each company which you wish to save to a target library. You can save a maximum of ten companies only.

Press **F8=Update** to effect the save.

The system will display status messages at the bottom of the screen as the files are saved. When the save is complete, a confirmation message is shown. Press **Enter** to return to the menu.

Security

When the procedure has been completed, you should transfer the library containing the saved company files to offline storage on magnetic tape or cartridge.

Restore A Company

3/GLU

This facility enables you to restore a company from a library into the live files library. It is effectively the reverse process of the Save A Company procedure.

Warning: The Restore A Company procedure requires exclusive use of the General Ledger module.

Warning: You are advised to take a security copy prior to running this procedure.

Select the GL utilities option Restore A Company. A message will be displayed asking you to make sure a backup of the restore library has been taken before continuing with the procedure. Press **F5** to continue.

Enter the library details and press **Enter**. A cautionary message displays; press **F5** to display a list of the saved companies which exist within the source library. Enter 1 against the company you wish to restore, and press **F8=Confirm**.

The system will display status messages at the foot of the screen as the files are processed. When the procedure is complete, a confirmation screen displays.

Delete A Company

4/GLU

This procedure allows you to delete companies from the General Ledger.

Warning: Great care is needed while performing this procedure. Beforehand, as well as creating a security copy of the files library, you may wish to save the data which you intend to delete. You can achieve this by using the Save A Company procedure followed by a security backup.

Select the GL utilities option Delete A Company. Enter the library details, press **Enter**, and **F8** to continue.

A list of all the companies in the General Ledger displays. Enter 4 against each of the companies which you wish to delete.

Note: You can only delete up to a maximum of ten companies each time you run this procedure.

Press **F8** to delete the companies.

Warning: The deletion process involves copying the existing files to the work library and dropping off data for the companies no longer required. This process may take a long time and consume a lot of disk space for large databases.

The system will display status messages at the bottom of the screen as the files are being processed.

Rebuild Chart Of Accounts

Three utilities options are available to run a name scan index and rebuild chart of accounts at account levels:

- Ledger Name Scan Index.
- Account Name Scan Index.
- Sundry Creditor Name Scan Index.

Ledger Name Scan Index

11/GLU

This procedure enables you to reconstruct the indexes used on the ledger name search facility of the General Ledger.

Select the GL rebuild chart of accounts option
Ledger Name Scan Index and a batch selection
screen displays.

Fields:

Company

Enter the company whose index you wish to rebuild.

Press **Enter** and a batch job will be submitted to
perform the rebuild.

Account Name Scan Index

12/GLU

Select the rebuild chart of accounts option Name Scan Index and a batch selection screen displays.

This procedure enables you to reconstruct the indexes used on the account name search facility of the General Ledger.

Fields:

Company

Enter the company whose account name index you wish to rebuild.

Press **Enter** and a batch job will be submitted to perform the rebuild.

Sundry Creditor Name Scan Index

13/GLU

Select the rebuild chart of accounts option
Sundry Creditor Name Scan Index to display a
batch selection screen.

This procedure enables you to reconstruct the indexes used on the ledger name search facility of the General Ledger.

Fields:

Company

Enter the company for which you wish sundry creditor account name index to be rebuilt.

Press **Enter** and a batch job is submitted to
perform the rebuild. A report is produced
confirming the rebuild.

Posting Accounts

14/GLU

Select the rebuild chart of accounts option
Posting Accounts to display a batch selection
screen.

This option rebuilds the system list of existing account codes with their extended codes. The option should not be used unless a corruption occurs in the list of accounts.

Fields:

Company

Enter the company for which you wish posting accounts to be rebuilt.

Press **F8=Submit** to submit the job.

User Accounts

15/GLU

Select the rebuild chart of accounts option User Accounts to display a batch selection screen.

This option rebuilds the system list of existing user group codes and their views.

Warning: The option should not be used unless you believe a corruption has occurred in the list of accounts.

Select Cross-Ledger User-Defined View Window

Select a user-defined view to cross-reference from the list of existing views.

The screenshot shows a terminal window titled 'GL682 Z1 - GB Demonstration Company User GBJBA1MS 22/04/97 8:31:29'. The main menu includes 'Rebuild User Groups List' and 'Led'. A sub-window titled 'Select Cross-ledger User-defined View' is open, displaying a list of views with a 'Key' and 'Key description'. The 'Key' column has a value of '123456789'. The 'Key description' column lists several views: 'CROSS LEDGER CJR', 'test foe prob 965', 'test 2 for problem 965', 'Location', 'X View 3', 'X View 1', 'Registration number', 'X View 2', 'Cost Centre', and 'test'. A 'More +/' button is visible in the top right corner of the sub-window. At the bottom of the sub-window, it says 'F12=Previous'. The bottom of the terminal window shows a status bar with '10-08', 'SA', 'MW', 'KS', 'IM', 'II', 'KENB20A', and 'PET165S2'.

Key	Key description
123456789	CROSS LEDGER CJR
	test foe prob 965
	test 2 for problem 965
	Location
	X View 3
	X View 1
	Registration number
	X View 2
	Cost Centre
	test

Fields:

Select

1 - Select an account ledger view in which you believe a corruption has occurred.

When 1 is selected against an account code, that code is selected and the Rebuild User Group List selection screen will display.

Rebuild User Groups List Screen

Note: This facility requires exclusive use of the system.

Select the GL utilities option User Accounts to display a batch selection screen.

GL682	Z1 - GB Demonstration Company	User CUSTSERV	19/11/96
			14:32:14
Rebuild User Groups List			
Ledger ?		(Leave blank for cross-ledger)	
From period . . .		(Leave blank for earliest)	
To period		(Leave blank for latest)	
F3=Exit F4=Prompt F13=Rebuild all			
05-20 SF MW KS IM II KENB20A PET16SS2			

Fields:

Ledger ?

Select to rebuild user groups for one ledger or leave blank for all ledgers.

View

When you have selected a single ledger the default view code will display.

F10=Change View will allow you to change the view.

From Period (Leave blank for earliest)

Enter the period from which you wish the rebuild to start. Blank causes the date this rebuild was last run to be selected.

To Period (Leave blank for latest)

Enter the last date of the period to be selected for the rebuild. Blank causes today to be the last date selected.

Functions

F10

Change View. A window will display to allow you to select a different view for the selected ledger.

F13

Rebuild All. This option is given when the ledger field is left blank. Confirm that the user account rebuild is to proceed for all ledgers.

Press **Enter** to start the rebuild.

Balances Verify/Rebuild

Two options are available:

- Balances.
- Balances to Transactions.

Balances

21/GLU

This procedure is used to recalculate balances from their corresponding transaction postings after discrepancies have been discovered.

A report is produced confirming the rebuild or providing details of any discrepancies/corrections made.

Select the GL verify/rebuild balances option
Rebuild Balances to display the selection screen.

Fields:

Company Code

Enter the company code for which you wish to perform the rebuild.

Start Period

Enter the period from which you wish the rebuild to start. All transactions from this date will be included in the rebuild procedure, using the period balances as at the end of the preceding period as the base. This may be left as zero.

Press **Enter** to start the rebuild. Press **Enter**
again to confirm the request.

Balances To Transactions

22/GLU

Several reports will be produced which confirm the validation or provide details of any discrepancies found:

- Journals in error.
- Totals to date.
- Period balances (base).
- Currency period balances (if multi-currency).
- Account transactions.
- Control accounts.
- User-defined balances.

Select the GL utilities verify/rebuild option
Balances to Transactions and the batch selection
screen displays.

This procedure searches through the General Ledger files and checks the journals and control accounts to ensure that details have been entered correctly.

It examines all the journal entries and determines if any transactions have not been processed. It ensures that control totals equal the sum of the debits and that the sum of debits equals the sum of credits. Account codes used are validated and all control account totals are checked.

The procedure prints reports detailing any errors or discrepancies found.

Fields:

Company Code

Enter the company you wish to process.

Start Period For Verification

Enter the period from which you wish processing to begin in the format YYPP. This may be left as zero.

End Period For Verification

Enter the last period up until which you wish you wish the processing to end in the format YYPP. This may be left as zero.

Press **Enter** to accept the entries you have made.

VAT Postings

23/GLU

This procedure is used to reconcile VAT posting values to the General Ledger with VAT transaction records. Any discrepancies are reported.

Select the GL utilities option VAT Postings to display the selection screen.

Fields:

Company Code

Enter the company code for which the reconciliation is required.

From Session

Enter the session number at which the reconciliation is to start. Leave blank to include the earliest recorded session.

To Session

Enter the session number at which the reconciliation is to end. Leave blank to include the most recent session.

Press **Enter** to submit a batch job to carry out the reconciliation procedure.

The job reads all General Ledger VAT transactions for the selected sessions and matches them to the VAT transactions for the same sessions.

If in any session the General Ledger and VAT values are different, the details are printed on a VAT Reconciliation report.

Reconcile Currency Period Balances

24/GLU

Select the GL utilities option Reconcile Currency Period Balances to display the reconciliation screen.

This option produces a report to reconcile period balances to the equivalent currency period balances.

This report should be run before closing the final period of the fiscal year.

Select the Reconcile Currency Period Balances option to display the selection screen.

Fields:

Period

Enter a valid GL period. You cannot enter a year close or an open journal period.

Ledger

Enter the ledger you wish to report on, or leave blank for all ledgers.

If you enter a ledger you cannot enter an account.

Account

Enter the account you wish to report on.

If you enter an account you cannot enter a ledger.

Only Print Error Accounts

0 - Print all accounts.

1 - Print exceptions only.

These exceptions are any accounts where the base debit balance minus the base credit balance does not equal the sum of the base debit balances on currency balances minus the sum of base credit balances on currency balances.

If no accounts are in error, a message is printed: All accounts reconcile.

Press **F8=Submit** to submit a job to produce the report.

Submit Reconciliation Extract

1...
2... **25/GLU**

This batch process should be run daily, either from the menu, or it may be scheduled through Machine Manager.

General Ledger debits and credits are checked against AR/AP totals and any imbalanced accounts are selected.

A summary of extracted errors may then be enquired on at the GL Enquiries option Reconciliation Extract Enquiry.

Warning: It is recommended that this batch job is run as an overnight job.

Select the verify/rebuild balances option Submit Reconciliation Extract to display the batch job window.

Unprocessed Transactions Report

1...
2... **26/GLU**

This batch process should be run as required, either from the (utility) menu option, or it may be scheduled to run overnight through Machine Manager.

A listing will be produced of transactions, which were posted before the system date, and, have not yet been updated in General Ledger. The listing will include full transaction details in session order.

Warning: It is recommended that this batch process is run as an overnight job.

Select the utilities (verify/rebuild balances) option Unprocessed Transactions Report. The report selection window displays.

Press **F8=Confirm Submit** to start the batch process and be returned to the menu.

Maintain Application Controls

31/GLU

Select the GL miscellaneous utility option
Maintain Application Controls and the report
selection screen displays.

This facility enables you to set up or maintain the module (application) control values. These values are normally maintained automatically by the General Ledger module.

Obviously, any changes to these values must be considered carefully, and it is suggested you consult your software supplier before making any modifications.

*Note: These values apply at module level, not
company level, so any changes apply across all
General Ledger companies.*

Fields:

Last Update Number Used (General)

All journals and journal transactions are stamped with an update number when they have been processed by the update routine. A number is automatically generated for each update by taking this generated number and incrementing it.

Last Update Number Used (VAT)

VAT transactions are stamped with an update number when they have been processed by the update routine. A number is automatically generated for each update by taking this generated number and incrementing it.

Last Journal Number Allocated

Each journal posted to the ledger must have a unique reference for access and audit purposes. In the case of general journals, this reference number is entered manually with each journal. For the other types of journal, for example, standing, constant, spread, apportionment and cost allocation journals, this reference is automatically allocated by the module. This control value holds the number allocated to the last reference posted.

Press **Enter** to update the module control data.

Start/End Balances Update

1... **32/GLU** **2...**

This procedure enables you to control the update of balance records within the General Ledger through the update subsystem. It also displays information about the status of the subsystem and allows amendments to be made.

You might use this procedure when closing the subsystem at the end of the day, and starting it at the beginning of the next day. The procedure can be automatically run by including it in the Application Day End routines.

It might also be run to ensure that no changes are made to the period balances while certain utilities are being run.

If you wish to operate on a multiple environment system - for example, live and test - you will need a separate subsystem for each environment. Your software supplier can advise.

Starting And Ending The Balances Update

Select the GL utilities option Start/End Balances Update.

The name and status of the subsystem in which the General Ledger is running displays at the top of the screen. The status will be one of the following:

- * ACTIVE *.
- * INACTIVE *.
- * END PENDING * - when you have chosen to end the subsystem and it is currently waiting to be closed down.

Fields:

Send Error Messages To

Enter the name of a user to which a message should be sent if the system finds that an invalid journal has been posted into the General Ledger.

The default user ID for this facility is QPGMR. If this user ID is used, the messages should be checked and cleared regularly. Failure to do so may result in the message queue becoming full, and the subsystem ending.

Send Error Reports To

Enter the name of a user to which a report should be sent if the system finds that an invalid journal has been posted into the General Ledger.

Delay Time (Seconds)

Enter the time, in seconds, that you wish the system to wait before processing the unprocessed journals. Enter from 1 to 999999 seconds.

The system will sleep for the time specified, then process any journals that have been posted, then sleep again for the time specified, etc.

Functions:

F5

Refresh. Redisplays the current status of the subsystem.

F10

Start Sub-System. Appears only if the subsystem is * INACTIVE *. It enables you to start the subsystem.

F11

End Sub-System. Appears only if the subsystem is * ACTIVE *. It sets a flag to say that the next time the program wakes up it should close itself down immediately rather than process journal postings.

F18

Display Sub System. Takes you into the command WRKSBSJOB for the subsystem update.

To update any entries you have made on the screen, press **Enter** and then **F8=Confirm** to confirm. You will be presented with a final window prompting you to enter 1 if the changes you have made are to be implemented.

Postings to an invalid company (for example, a company where the set-up has not been completed) will not be processed. A report will be printed and a message sent each time, until the company profile is corrected, when the transactions will be processed.

If transactions do not appear to be updating the balance files or if transactions have been posted to the errors account, you should check the error reports and messages to find out why. You are advised not to ignore the error messages and reports because their number will build up in a short space of time.

If you are not the person nominated to receive the error reports you can still read them by pressing **F18=Display Sub-System**.

Maintain Country-Specific Parameters

33/GLU

This option enables you to change the parameters which control the country-specific functions within the Financials software. The way in which tax is processed, how postings are made and so on, can all be controlled and modified using these options.

This is a powerful option, and should not be used unless you have a thorough understanding of the implications of the actions you take. This is particularly true if you have already begun to use the software. If in doubt, consult your software agent.

Select the utilities option Maintain Country-Specific Parameters to display the first maintenance screen.

Press **Enter** on the first Maintain Country-Specific Parameters Screen to display the second screen. Thereafter page down through the parameter screens.

Country-Specific Parameters 1-10

Enter the company you wish to maintain.

Press **Enter** to accept the company and a list of parameters will display for maintenance.

Fields:

VAT Registers Active? (001)

0 - VAT registers inactive.

1 - Tax documents are to be stamped with protocol numbers within VAT registers. This is an Italian requirement.

Registration Date Applicable? (002)

0 - Tax registration date not applicable.

1 - Tax documents should have a specific registration date which is based on the tax date of a document.

Dissections On Accounts Receivable Invoices? (003)

1 - Default General Ledger dissections are used.

2 - General Ledger dissections are entered by the user.

Sundry VAT Postings Inactive? (004)

0 - VAT may be applied to sundry postings in General Ledger.

1 - VAT postings should be restricted to Accounts Payable and Accounts Receivable invoices and credit notes. Journals posted through these modules will not be subject to VAT.

Default VAT Calculation Method (Accounts Payable) (005)

0 - You enter both goods and VAT values for each dissection.

1 - You enter the goods value, and the system calculates the VAT.

2 - You enter the total value, and the system disaggregates the goods value and VAT.

Default VAT Calculation Method (A/R) (005)

0 - You enter both goods and VAT values for each dissection.

1 - You enter the goods value, and the system calculates the VAT.

2 - You enter the total value, and the system disaggregates the goods value and VAT.

AP Default VAT Calculation On First Line? (005)

0 - No default VAT calculation on the first dissection line.

1 - If a purchase account has been defined for the supplier, VAT (for the whole invoice) will be calculated on the first dissection line using the VAT calculation method entered.

Validate VAT On Postings (Accounts Receivable)? (005)

0 - The VAT entered on postings will not be validated.

1 - The VAT value must have been calculated and entered correctly to match the VAT rate entered.

Withholding Tax Active? (006)

0 - Withholding tax is inactive.

1 - Withholding tax is active and accounted for on payment. You must use 1 for Italian withholding tax.

2 - Withholding tax is active and accounted for on invoice posting. This setting must be used for Spanish withholding tax.

Withholding Tax - Suppress IP Transactions? (006)

0 - If withholding tax is active, additional IP GL journals will be created in the payment cycle.

1 - If withholding tax is active, additional IP GL journals will not be created in the payment cycle.

Adjustment Journals Allowed? (007)

0 - Adjustment Journals may be amended as required.

1 - Amendment of AP and GL transactions is allowed provided they have not yet been printed on the government journal report. This is an Italian function only.

Italian Statutory Reports? (008)

0 - No Italian statutory reports being produced.

1 - Italian statutory reports are to be produced. If you select this option, you must also select:

001 - VAT registers.

002 - Registration date.

004 - Sundry VAT postings inactive.

010 - Date - period correspondence.

014 - Accounting calendar.

Check That Date & Period Correspond? (010)

0 - Date and Period are not checked for compatibility.

1 - Date and period entered must be compatible. This is an Italian requirement.

Page down to display the next screen.

Year-End Journal Active? (011)

0 - If a year-end journal is not to be used.

1 - Create a year-end journal to support the clear-down of profit and loss accounts and the bringing forward of balance sheet accounts.

VAT Rounding Rule (012)

1 - Half-adjust VAT to the nearest smallest unit of currency.

2 - Round VAT up.

3 - Round VAT down.

This applies to Accounts Receivable and Accounts Payable invoices, credit notes and journals only.

Statutory Account Length? (013)

0 - If no statutory account length is imposed.

1 - If an element of the fiscal account is statutory (for example the PCG in France) enter 1 here to be able to enter the size of that element.

Accounting Calendar Active? (014)

0 - The posting period of a transaction defaults to the current period. This can be changed.

1 - The posting period is calculated by the system from the date of the transaction.

Journal Codes Active? (015)

0 - If journal codes are not to be active.

1 - Journal codes must be maintained on GL transactions, and a journal code is required against bank account details in Cash Management.

This function is supplied for the analysis of transactions within French statutory reports. Available journal codes are set up as GL parameters under the major type JCOD.

The reports affected are:

- The Journal Listing, which selects GL journals according to the range of codes you enter when you run the report.
- The Central Journal Report, sequenced by journal code within journal type.

Payment Run Selection On Release? (016)

0 - If you do not wish to release payments individually but by payment run.

1 - You can select payments by payment run instead of individually when releasing supplier payments in Cash Management.

Suppress VAT On AR Adjustments? (017)

0 - VAT may be applied to journal adjustments posted on accounts receivable.

1 - If you wish VAT not to be applied when Journal adjustments are posted on accounts receivable.

Suppress VAT On AP Adjustments? (017)

0 - VAT may be applied to journal adjustments posted on accounts payable.

1 - If you wish VAT not to be applied when Journal adjustments are posted on accounts payable.

1099 Codes Active? (018)

0 - Do not assign US government codes to make a 1099 return.

1 - You wish to assign US government codes to Accounts Payable invoices, in order to make a 1099 return.

Extra Rate VAT? (019)

0 - No surcharge is to be used. The VAT code maintenance option in GL will not enable you to enter a surcharge percentage.

1 - A surcharge VAT rate for a VAT code is to be applied for certain customers. This is mainly Spanish function. When you are setting up or maintaining a VAT code in GL you will have the option to enter a surcharge percentage.

VAT On Interest On Overdue Debts? (020)

0 - Do not calculate interest on overdue debts (and so attract VAT).

1 - Interest on overdue debts will be calculated and will attract VAT.

Debit And Credit Sign Override? (021)

0 - Do not allow normal debit and credit transactions to be reassigned as positive and negative.

1 - You can override the normal signing of transactions (positive - debit, negative - credit). Override cannot be performed on invoices in Accounts Payable or Receivable.

Item Entry Bank Account Override? (022)

0 - Do not allow a different bank account to be entered on AP payments.

1 - You can specify the bank account for payments while entering Accounts Payable items.

Page down to display the next screen.

AR Due Date Exclude Weekends? (023)

0 - Due date calculation in AR will include weekends.

1 - Due date calculation in Accounts Receivable will ensure that the due date does not fall on a weekend.

AP Due Date Exclude Weekends? (023)

0 - Due date calculation in AP will include weekends.

1 - Due date calculation in Accounts Payable will ensure that the due date does not fall on a weekend.

AR Due Date Exclude Holidays? (024)

0 - Due date calculation in Accounts Receivable will not exclude holidays.

1 - Due date calculation in Accounts Receivable will ensure that the due date does not fall on a holiday.

AP Due Date Exclude Holidays? (024)

0 - Due date calculation in Accounts Payable will not exclude holidays.

1 - Due date calculation in Accounts Payable will ensure that the due date does not fall on a holiday.

Post Discount On Collection Docs At Maturity? (025)

0 - Discounts on collection documents will be posted at the time the collection document is accepted (the status is set to 10).

1 - Discounts on collection documents will be posted at the time the collection document is matured (the status is set to 40).

Investment Tax (027)

0 - Do not allow additional tax to be paid on purchases.

1 - Enables additional tax to be paid on purchases. This is a Norwegian requirement.

Third Party Bills Active? (028)

0 - If you are not using third party bills collection.

1 - Collection documents can be received from third parties (parties not set up as customers on the system).

If a customer settles a debt by passing on a third party's collection document, then the debt is cleared from the customer's account, but must be collected from the third party.

Value Date Active? (029)

0 - The value date is the same as the document date.

1 - The value date is the anticipated date of clearing of Cash Management transactions. It is determined according to the payment method of the transaction. The system calculates the correct date from a matrix set up in Value Dates Table Maintenance.

2 - The value date is the anticipated date of clearing of Cash Management transactions. It is determined according to the payment method of the transaction. You enter the value date; the system does not calculate it.

Partita Active? (030)

0 - Partita is inactive.

2 - Accounts Receivable and Accounts Payable postings made are grouped under a unique system-generated partita number composed of the year and item reference. When you allocate the partita items, the relevant partitas are consolidated into the partita with the lowest partita number. This is an Italian function.

Note: Option 1 is no longer used. Any companies set up with option 1 will automatically be treated as if they had option 2.

VAT Reconciliation By GL Account (031)

0 - Do not reconcile GL accounts with a VAT code when posting. You will not have access to the VAT Reconciliation By GL Account option.

1 - A VAT code associated with GL accounts can be reconciled against that used when posting. The VAT Reconciliation By GL Account option reports VAT inputs/outputs by GL account.

2 - A VAT code and its input or output flag can be maintained (at the Accounts Maintenance option). The VAT Reconciliation By GL Account option reports VAT inputs/outputs by GL account and accounts used for both Inputs or Outputs.

Select Currency Conversion Date (032)

0 - Do not allow a currency conversion date to be selected when posting AP invoices.

1 - When posting invoices in Accounts Payable you will be able to choose the currency conversion date used for conversion.

Note: As a result of selecting 1 at this field the Convert Point field will display in Invoice Posting. From Convert Point you may then further select 1 if you wish the currency conversion rate of the document date to be used, and 2 if you wish the tax/registration date to be used. For acquisition VAT the Customs rate is used, but the rate is determined from the document or registration date as for other invoices/goods.

Defer Payment Gain/Loss? (033)

You can enter the following options:

0 - Currency exchange gain or loss will be generated both when a payment is made and when a suspended payment is posted.

Note: If 0 is entered gain/loss values are calculated from the exchange rate prevailing when the payment was created.

1 - Currency exchange gain or loss may be generated when a suspended payment is posted but not when the payment is posted.

Note: If 1 is entered, gain/loss values are calculated from an exchange rate averaged on the sum of invoices posted.

Default Type Of Collection Document Session (034)

0 - If you do not use collection documents in Cash Management.

1 - As a default your collection documents will be sent to the bank.

2 - As a default your collection documents will be sold to the bank

Page down to display the next screen.

Mandatory Entry Of Supplier Reference? (036)

0 - At AP posting options it will be possible to leave the supplier reference field blank.

1 - At Accounts Payable posting options (invoice/credit note and other AP transactions) the supplier reference must be entered.

Validate GJ External Reference (037)

0 - External references entered will not be checked for uniqueness against the same company/transaction type.

1 - Each general journal external reference must be unique (for the same company with the same transaction type).

Account Description On Journal List ? (038)

0 - The transaction description will be included against the journal line on the Journal Listing Report.

1 - The account description will replace the transaction description against journal lines on the Journal Listing Report.

Autogenerate General Journal References (040)

This field is reserved for future use.

External Function (042)

0 - The external function is not available.

1 - The **F23** function will be available at the Customer Maintenance and Item Enquiry screens to access your customised program. The function of such a program will have been designed by your company to suit your customer maintenance records' requirements.

Belgium VAT (043)

0 - Belgium VAT is not in use.

1 - Set this to 1 if you are a Belgium company using Belgium VAT. Your version of Customer Maintenance displays the year end reporting field.

Opt

Enter the option value for each parameter.

+ For Help

To access the help text for a parameter, enter + in the relevant field and press **Enter**. A window of help text displays. This is different from the usual **F1** or Help key help text.

Press **Enter** and then **F8=Update** to update amended country specific parameters. The first screen, to select a company displays.

Reset Unrealised Gains And Losses

34/GLU

This utility is designed to be run when a database corruption has occurred. It resets any revalued records in linked modules back to the original base value.

You will then be able to re-run the normal Currency Revaluation Report program to arrive at the correct position.

Select the GL utilities option Reset Unrealised Gains and Losses and enter the company for which you wish to run the procedure.

Press **Enter** and then **F8=Confirm** to confirm.

The procedure reads through all the Accounts Payable, Accounts Receivable and Cash Management companies attached to this General Ledger company and resets the revalued fields. The outstanding original value is restored. It then reads through the unrealised gain and loss accounts in the General Ledger and writes journals to set the base values to zero.

Post To Post-Inhibited Accounts

35/GLU

This facility allows you to post values to post-inhibited accounts (normally impossible). It takes you into the General Journal Processing option to process a general journal.

Warning: Accounts that are normally post-inhibited are included in the posting.

Such a procedure might be used when posting your opening General Ledger balances.

Select the utilities option Post to Post-Inhibited Accounts and enter the company which holds the accounts to be processed and press **Enter**.

Follow the procedure of posting a General Journal.
