Chapter 2

Processing

Processing Introduction

One of the main functions of the Accounts Payable module is to enter invoices, credit notes and journals (collectively known as items) as transactions to the ledger. This is done using the processing options listed on the menu.

You should read the following sections on Accounts Payable processing before using an individual menu option.

The Use of the Log

Any item can be posted directly to the ledger when authorised. However, to avoid delays in registering the receipt of invoices, the use of the logging procedure is recommended. An item is registered to the log and remains there until it is either cancelled or transferred to the ledger when authorised. A location code is entered against each invoice to identify where an invoice has been sent for approval

A log item will be assigned a reference number if this is requested on the company profile. The item must also have a location defined for it, indicating where an item is to be sent for authorisation.

Additionally the log is used as a holding area until the goods have been received and the invoice checked against a goods received note. If the JBA Purchase Management system is being operated the invoice can be matched against the goods received note via the invoice matching option in Purchase Management. This process will match the invoice lines to the order lines received and update the invoice dissections screen with the General Ledger account codes from the purchase order whilst catering for price variances.

There are several reports available to analyse postings to the log. See the reports section for more details.

Note: A log item will not show as an open item on the supplier account but, does appear on a separate screen within supplier enquiry..

Understanding Session Control

The terms batch and session both identify a single group of transactions posted to the module. The important differences between them must be understood, and are explained here.

When you enter an Accounts Payable option to post an item (that is an invoice, a credit note or a journal), a system session is started with an automatically generated session number. This number is recorded with every transaction entry you make until you complete the transaction entry procedure. The session numbers are held on every transaction record for use in session audit reports and for enquiries.

If you cancel or interrupt a session, the session number remains assigned, but is identified as a cancelled or incomplete session. Certain session types can be recovered for instance if a screen fails due to power failure. Session Type I will result. See session recovery in the Utilities section.

Note: Session control is an important feature in item reports and enquiries, in archiving data, and in audit trails, and is therefore controlled by the system. It is not an optional feature.

Understanding Batch Control

In contrast to session control, the batch control function is optional, and the batch control fields will be displayed only if the Accounts Payable Company Profile is set up to run batch control.

If it is, then batch details (a batch number and a control total) are entered on the same screen as the one that begins a new session. The facility enables you to group together a set of transactions in a batch - for example, invoices issued in a day. A control total is entered for the batch of transactions being entered.

When you have completed a batch the system matches the actual total of all the transactions entered against the specified batch total and any discrepancy between the two totals is highlighted.

Note: The batch control total is always entered as a hash total, particularly when transactions of various currencies are entered. For example, if you are entering one invoice for 100 sterling and another for 100 French francs, then the hash total is 200.

Note: The batch total control is intended to be a check for the user, and is not enforced.

The Effect of Country-Specific Parameters

These parameters, set up in General Ledger Utilities, can affect such features as the accounting period to which an invoice is posted, the goods and VAT values that are required for each line dissection and the dates when an invoice can be due.

Note that the parameter entitled 'Default VAT calculation method (A/R)' determines the values required on the invoice dissection line:

- 0 - Enter the goods and VAT values
- 1 - Enter the goods value and the VAT value is calculated
- 2 - Enter the gross value and the VAT value is calculated from this.

The parameter 'Check that date and period correspond' causes the system to validate the invoice date to see if this falls within the module posting period.

The 'Accounting Calendar Active' parameter switches on the calendar in the GL. Non-working days and holidays can be specified in this calendar. It is possible to prevent future posting by using this calendar. There is a field that allows or disallows this.

If the 'AP due date Exclude Holidays' and 'AP Due Date Exclude Weekends?' parameters are set on, the 'Accounting Calendar Active?' mentioned above must be at 1.

Posting an Item

The posting procedure is similar whether posting to the log (the Item Entry option on the menu) or to the ledger (Direct Posting). The same screens are also seen when transferring items individually from log to ledger (Confirm Log Entries).

The screens outline the steps involved:

- Start a session (also a batch, if batches are used)
- Select supplier
- Enter document header information
- Enter document detail information (dissections)
- End session

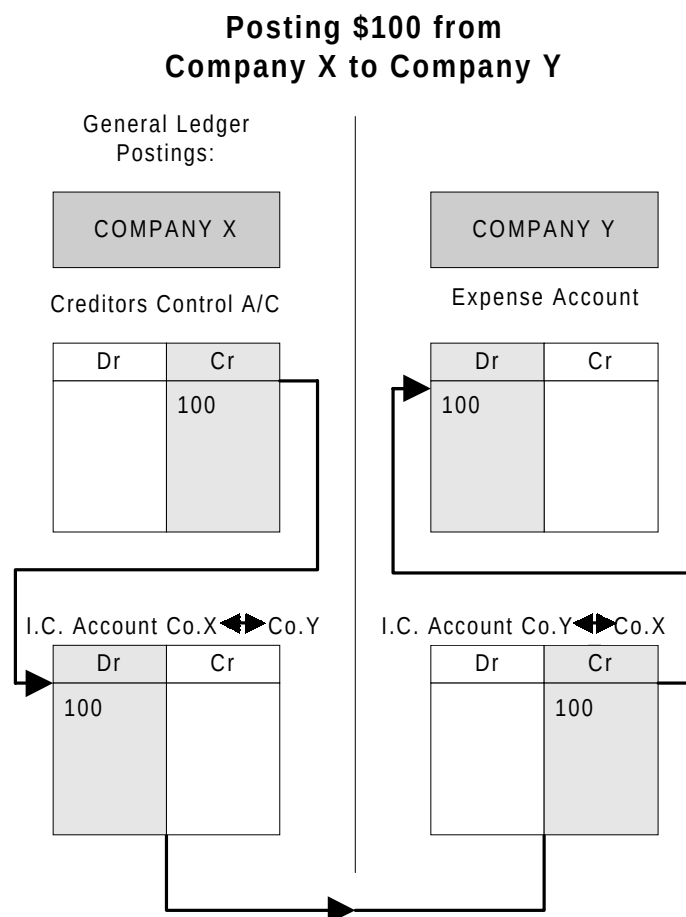

Inter-company Accounting

Any Accounts Payable company can be set up to use the inter-company accounting facility. This facility enables you to post journals, invoices and credit notes between different General Ledger companies. The chart of accounts for each company which uses this facility must include inter-company control accounts.

Note: Refer to the General Ledger for more details of setting up inter-company control accounts.

The figure below illustrates how inter-company posting is performed between two companies.

If you select the inter-company posting option to post transactions between companies, then the system includes an additional field in the General Ledger item analysis screen that enables you to select a target company for posting. If you then prompt on the account number field, the prompt window displays all the available account numbers for the selected company. When you have completed a batch that includes inter-company transactions, the postings are made automatically.

Cross Period Journals

The purpose of this function is the posting of accruals and prepayments. It enables you to spread both General Ledger journals and Accounts Payable invoices over several periods. Both prior and future periods may be used, although you will need separate authority to use prior periods. You must also be authorised to the task code to see the necessary fields for posting cross period journals.

You will be able to maintain spread profiles for the dissections using the usual budgeting spread profiles.

The function is controlled by a cross period journal field shown on the first screen of the journal. Set it to 1, and you will see the cross period journal option made available on each dissection you post. When you press **Enter**, a window will ask you to enter the relevant periods.

Enquiries enable you to drill down to the relevant journal dissections. The function is also available for General Ledger journal posting.

Reverse Sign Postings

This function is controlled by a country-specific parameter in General Ledger Utilities. If activated, you can make corrective postings by posting positive values to the credit side and negative values to the debit side of the account.

The facility is available for CR (credit) and JL (journal) postings only.

Job Management Posting

If your Accounts Payable system is linked to the Job Management system then invoice, credit note or employee expenses can be posted to a specified holding GL account. Your posting options for job costs are from the following menu options: 'Confirm Log Entries', 'Direct Posting' and 'Journal Direct Posting'.

7 processing options are available for invoice log and transaction posting.

- Item Entry
- Confirm Log entries
- Volume Log to Ledger Transfer
- Log Amendment
- Journal Log Entry
- Direct Posting (Transaction)
- Journal Direct Posting (Transaction)

Item Entry

1/APP

Although invoices, credit notes and journals can be entered as postings directly into the ledger, it is more usual to enter them first as log items. In the log they await approval for payment, and confirmation (i.e. transfer them to the ledger) as a separate operation.

This option enables you to make such entries for invoices and credit notes only.

Take the Item Entry option from the Processing menu in order to enter invoices and credit notes on the log.

(If you wish to enter journals, take the Journal Log Entry option from the same menu. The screen sequence and fields will be the same, but the item type is JL and cannot be changed).

Log Entry Screen

The Log Entry screen will be displayed to enable you to enter the batch control value and quantity, if using batch control. If not, these fields will not be displayed on your screen.

PL103	Z1 - GB Demonstration Company	USER LOAN	14/11/96
			14:56:17
Log Entry			
Session number : NEW SESSION			
Document type : <u>IN</u>			
Batch number █			
Control value		Quantity	
Supplier selection . . . 1			
Confirm items -			
Inter-company -			
F3=Exit		F12=Previous	
12-27	SF	MW	KS
		IM	II
		KENB20A	PET16SS2

Fields:

Document Type

You may only input one type of transaction per session. Enter one of the transaction types as follows:

IN - Invoices.

CR - Credit Notes.

If you entered via the Journal Log Entry option, the type is JL.

Batch Number

The batch number assigned by the user is recorded with the session control details for enquiry/reporting purposes. If the batch number has previously been used, a warning message is displayed. To override the warning, press F19.

Control Value

A batch total must be entered, but the value entered here does not restrict the value of documents subsequently entered. At end-of-batch, the value of documents entered is reconciled. Any discrepancy is highlighted but can be ignored. See the earlier section on understanding batch control.

Control Quantity

Enter the batch total for any quantities that are to be entered.

Confirm Items

If you wish the item entry screen to be re-displayed after input of each item, to enable you to validate the input data, enter 1. Otherwise leave blank or enter 0.

Supplier Select

This field governs the sequence of screens.

0 - (or blank) On completion of each item a screen will be displayed for entry of another item for the same supplier (F12 will enable you to select another supplier).

1 - On completion of each item the supplier selection screen will be displayed.

Inter-Company Postings

Enter 1 if inter-company postings are to be allowed for this supplier, otherwise enter 0 or blank.

Cross Period

Enter 1 if cross period postings are to be allowed for this supplier, otherwise enter 0 or leave blank.

This will enable a value posted to a G/L account in one dissection to be split over a number of G/L periods using a pre-defined spread profile.

Cross period VAT cannot be posted.

Note: The option to use batch totals when entering transactions is specified in the company profile. If you have chosen to use batch totals then the batch number, control value and control quantity fields will be displayed on the screen; otherwise the fields are hidden. Of the three batch control fields, the use of the control quantity field is optional, while entry of the batch number and control value is mandatory.

When you have entered these fields, press **Enter**.

Supplier Selection Screen

This screen shows the following fields:

Fields:

Supplier

Enter a valid supplier account code.

Supplier Text

1 - To display any text held against this supplier. The text is displayed, but cannot be amended by this procedure.

Reverse Sign

If you are posting a credit and you are using the reverse sign function (set up in country-specific parameters), then the reverse sign field will be displayed. Enter 1 to reverse the sign.

This function is used mainly to correct a previous entry, and is available only when entering a posting type of CR (credit) or JL (journal - via Journal Log Entry).

Functions:

F8

End the present session. You will be returned to the batch end screen, and the procedure will be found towards the end of this section.

F15

Review a list of items entered so far in this batch.

F23

Cancel the session.

Press **Enter**. If you entered 1 to see the supplier text, this will now be displayed. Otherwise the Invoice Log Entry screen is displayed.

Invoice Log Entry Screen

Press **Enter** when you have selected your supplier to see the Invoice Log Entry screen.

Fields:

Supplier Text

If a * is displayed, it indicates that there is text for this supplier. Enter 1 and press Enter if you wish to display it.

Our Reference

If the option to generate references automatically was taken at company profile level, this field is not displayed; a number is allocated. Otherwise, enter a unique reference for this document.

This reference should be recorded on the source document.

Register

If active, the VAT register facility is provided to enable you to produce your VAT reports based on tax area. The codes are set up in General Ledger by the user, and relate to a particular tax office.

Protocol

If VAT registers are active, the protocol numbers are the sequential numbers of invoices to a particular register.

Press F20 to display a window of valid protocol gaps and enter 1 beside a number to select it, otherwise type in the appropriate number directly.

Currency

The default is the supplier currency, but it may be changed.

This field is hidden if you are working in a single currency.

Tax Date

This is the date associated with this item for VAT purposes. If this is not entered, the document date will be used to establish the VAT period.

Document Date

Enter the date printed on the document, not the date on which it was received by your company.

This date is used to calculate the due date for payment.

Reason Code

This code is not displayed for invoices.

This code is mandatory for credit notes and journals and provides more detailed analysis of the reasons for such postings. The code must have been set up on the Reason Codes file.

Supplier Reference

This is the reference the supplier has attached to the item. This field is optional, but if entered it must be a unique reference within this supplier, ensuring that an invoice is entered only once.

Gross

The total value of the item (including VAT).

For journal postings, the value may be positive or negative. A positive value increases the value owing to the supplier (in the same way as an invoice), with debits to the dissection and VAT accounts. A negative value reduces the value owing to the supplier (in the same way as a credit note).

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the F17 function.

Currency Rate

If the currency rate code is not known, a rate specific to this document may be entered. The rate value entered will be used to convert the document gross value into the base currency value for this ledger. Up to five places of decimals may be specified.

Discount Rate

This figure represents the discount rate which is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this rate, and the new rate entered will override that specified for the supplier.

Discount Code

A discount code can be defined to hold the percentage discount structure of a particular supplier.

Discount Value

This figure represents the discount value which is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this value, and the new value entered will override that specified for the supplier.

Note: The rate and the value cannot both be used.

Due Date

The payment due date is calculated automatically from the payment terms defined for the supplier, and is based on the document date. It may be changed for this transaction if the option to change it is set on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country-Specific Parameters must be set up for this in General Ledger.)

Location Code

This field is used only for posting to the log.

Enter the appropriate code to indicate where this item is to be sent for authorisation. Reports can be obtained identifying which invoices are in which location.

Order Ref

Enter an order reference as required.

Ext Terms

If this item is to be paid by a series of instalments, enter the relevant extended terms code. These codes are defined in Cash Management.

Item entry will pay this item according to the terms used. On updating the item it is possible to amend the payment details within the extended terms code.

Status

Leave blank or enter a valid status code:

Blank - This will cause the item to be included in the automatic payment cycle when its due date is reached and the supplier is included.

1 - Select. This indicates that you have selected this item to be paid next time you run a 'payment due' report using selection method 2. (Selection method 2 enables items to be included in the payment run independent of their due date).

3 - Hold. This will cause this item to be held until released.

9 - Prompt Pay. This will cause this item to be included in the next automatic payment cycle should the supplier be included, irrespective of the supplier's payment terms.

The item must be transferred from log to ledger before the status becomes active.

Dist Code

Optional enter a distribution code that has been set up from the Accounts Payable Maintenance menu as a standard distribution profile.

When you enter the dissection screen, the General Ledger accounts specified for this distribution code will be entered automatically.

Depending on the type of distribution code, the gross value may also have been automatically spread over the accounts.

VAT Calculation

The value entered here will dictate how VAT is calculated for the dissection lines. The available values are:

0 - Both goods and VAT values are entered line by line.

1 - Enter the goods value, and VAT is calculated from it.

2 - The total value of the line is entered in the goods value and the system disaggregates the goods and VAT accordingly.

The default is controlled by the Country Specific Parameters defined on the GL Utilities menu.

Cash VAT

Enter 1 if this is a cash-based VAT supplier, and the invoice is tax reclaimable only on payment.

Text

For invoices, credit notes and journals, up to 99 lines of text may be entered at this stage. Only one line is displayed here. The roll key may be used to display or enter further lines if required.

Desc

This field enables you to enter free-format description relating to this item.

End the session you are in. You will be returned to the batch end screen, and the procedure will be found towards the end of this section.

Functions:

F15

Review Session. Review a list of items entered so far in this batch.

F17

Override Rate. Change the current currency conversion rate. For more information see Override Conversion Parameters Window

Note: Where the source and target currencies are both Euro currencies no override is permitted.

F20

Display protocol gaps.

F21

Call the bank account selection window.

F23

Cancel Session. Cancel the session.

Override Conversion Parameters Window (F17)

Override the default currency rate. To override the current rate you enter either:

- A predefined rate code specified on the General Ledger currency options.
- A new rate by which the value is to be multiplied or divided.
- The target value. The conversion rate will be calculated by the system.

For a more detailed explanation of currency processing and rate codes see the General Ledger.

Note: Where both the source and target currencies are Euro you may not override the conversion rate.

If you have entered a currency other than the base currency, you may override the default currency conversion rate by pressing **F17=Override Rate** on the Invoice Log Entry screen. You will see the Currency Conversion window.

Fields:

Rate Code?

Select a pre-defined rate code as set up in the Currency Rate code option.

Rate

Or, you may enter the new rate code to be used with up to five decimal places.

Multiply Or Divide

If this field is used, a value must be entered in the Rate field.

M - Multiply the values held in the source currency by the exchange rate to achieve the target currency value.

Note: For Euro conversion the system holds Euro/target fixed rates.

Note: For guidance on when to select Multiply or Divide in a Euro IN/OUT OUT/IN situation see the section Eurocurrency: Phase 1: Illustration Of Conversions.

D - Divide values held in the source currency by the exchange rate to achieve the target currency values.

Source to Euro

Note: This field displays when either the source or target currencies are currencies IN the Euro Zone.

The values of 0 or 1 default from the Euro Currencies Maintenance Option and decide the calculation rules.

0 - The currencies will be converted directly.

1 - Uses a triangulation currency conversion via the Euro currency.

Target Currency Value

Enter the target currency value and the system will calculate the rate.

Note: Only the variable part of the rate displays if the currencies are Euro OUT/IN or IN/OUT.

On pressing **Enter**, you will see the rate applied to the converted currencies. Press **Enter** again to proceed to the next screen.

Invoice Log Entry Dissection Screen

The gross value entered on the Invoice Log Entry screen will be entered in the fields at the bottom of the screen, according to the VAT rules chosen. If a certain General Ledger distribution code has been selected on the header, the dissections will be entered automatically and will appear as a list above the entry fields.

Note: All values are entered in the transaction currency, not in the base currency. The conversion rate already specified is used to convert them to base currency for posting to the General Ledger.

		Quantity . .			
		Description .			
F4=Prompt		F7=Ratio		F15=Amend item	
19-17		SF MW		KS IM II KENB20A PET165S2	

Fields:

Account Code

If a default purchasing account is specified for this supplier, it is displayed, but may be amended. For items being confirmed and for direct postings, this must be a valid General Ledger account code. The account code may be blank for a VAT only line.

Note that if the Validate Accounts and Validate VAT fields are set to 0 on the second screen of the Accounts Payable company profile, it is not necessary to enter valid GL accounts or VAT codes for the log.

Value

The value entered here depends upon the VAT calculation code to be used.

If the VAT calculation code to be used is 0, then both the value and VAT of the dissection must be entered manually and will not be calculated.

If it is 1, AND the VAT field equals zero, then the value must be entered, and the system will calculate the VAT. The value entered will therefore not change.

If the VAT calculation code is 2, this means that when you enter the value field, the system will subtract the VAT from this amount. The figure in the value field will thus be reduced.

If a default VAT code is set up for this supplier, then the first dissection line to be entered will use the VAT calculation code 2, REGARDLESS of the VAT code entered on this screen.

If no default is available, or if this is not the first dissection to be entered, then the VAT code used will be the one on the screen.

If a default purchase account has been defined on the suppliers' name and address details then a value will automatically be entered into this field and the VAT value field.

VAT Code

A VAT code is set up in the General Ledger to carry not only a percentage rate (in Britain, for example, the code STD might carry a rate of 17.5%), but also to specify the General Ledger accounts for VAT postings for sales and purchases.

When posting transactions, the system calculates a VAT rate from the VAT and goods values entered, and compares it to the rate attached to this VAT code. If these are not the same (or are outside the tolerance levels defined in the General Ledger), then an error message is given.

VAT Value

This is the VAT amount to be associated with the VAT code entered on this line. VAT can be entered individually against relevant items, or posted as one figure against any one of these items, or posted as a separate figure on its own.

How VAT is Calculated

If a default purchasing account is specified for this supplier, it is displayed, but may be amended. The default goods and VAT values are also calculated, based on the gross value of the transaction and the VAT code for this supplier. For example, if the gross value is 117.50 and the VAT rate is 17.5%. the goods value is 100.00 and the VAT 17.50.

If settlement discount applies to this transaction, the calculation of VAT depends on the discount basis of the VAT record. See the VAT subsystem in the General Ledger for a description of VAT codes and rates.

Description

Up to thirty characters may be entered as a description against this dissection line.

Quantity

Enter the quantity if required. This field is not mandatory, but the total quantity entered in a session will be reconciled against the batch quantity total, if one was entered. The quantity will also be part of the transaction posted to the General Ledger.

If you want to amend a dissection, then enter a 1 beside the line to be amended and press **Enter**. The details of that line will be displayed at the bottom of the screen, and can be maintained (or deleted).

If you want to see the account level codes for the dissection, enter 2 beside the line and press **Enter**. A window will display the information.

When you have entered all the items for the supplier, press **F8**.

Functions:

F7

Ratio/Qty. When you select this, the column headed Ratio/Qty replaces the Value/Qty heading. The values do not change, however, until you select **F7=Spread** that will now display.

F7

Spread. This function key only displays when you select **F7=Ratio/Qty**. **F7=Spread** has two purposes:

- Entering values in the spread mode means that goods, VAT and quantity values entered do not have to add up to the control value. They will, instead, be calculated and displayed as a ratio of the invoice control value.
- It will toggle the end column heading between 'Ratio/Qty' and 'Value/Qty'. When 'Value/ Qty' is redisplayed the **F7=Ratio/Qty** option replaces **F7=Spread**.

F11

Cancel the item being entered (not the entire session).

F12

If the VAT entered exceeds the tolerance level, this key enables you to override.

F15

Redisplay the header information for viewing or amending.

F20

Toggle between allowing input into the fields at the base of the screen, and allowing input into the fields listed at the top.

F22

Toggle between the General Ledger extension code(s) related to the dissection, and the description.

Extended Payment Terms Window

If the payment terms for the item you are posting involves extended payments, then when you make the posting (by pressing **F8**) a window will be displayed. The screen displays the extended payment terms associated with the extended payment code of the item to be paid.

Note that any changes made will affect this item only. Other items using the same extended payment code will be unaffected.

Fields:

Extended Terms

Enter a code and press **Enter** to see the extended terms associated with that code displayed.

Due Date

The due date of payment for the instalment on this line is displayed here. If you decide to change it, it will change for this item only. Other items using the same extended payments code will be unaffected.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.)

Payment Spread Amount

The payment value of the instalment on this line is displayed here. If you decide to change it, it will change for this item only. Other items using the same extended payments code will be unaffected.

Discount

The discount value of the instalment on this line is displayed here. If you decide to change it, it will change for this item only. Other items using the same extended payments code will be unaffected.

Payment Method

The payment method code for the instalment on this line is displayed here. If you decide to change it, it will change for this item only. Other items using the same extended payments code will be unaffected.

Functions:

F8

Update the extended terms with any amendments made. These amendments will affect only this payment, and other items using the same extended payments code will be unaffected.

F11

Delete the extended terms definition for this payment.

F12

If you wish to exit without updating the terms, press F12 and a message will be displayed warning you that if you press F12 again the extended terms will be used.

Payment Analysis Window

If you are using payment analysis, or if your company and supplier are using 1099 tax reporting, then when you enter dissections anywhere in the system for that supplier, this Payment Analysis window is displayed. This enables you to enter the values that you wish to be reported later.

Fields:

Code

Enter the analysis group code for the entered value.

Amount

Enter the value for the corresponding analysis group code.

Enter the values and analysis codes as appropriate and press **F8** to update.

Completing a Session Screen

When you press **F8** you are returned to the screen that started the session. This time, if you are using batch controls, the actual hash total accumulated during batch entry is displayed underneath the control value. An accumulated quantity figure is displayed for comparison with the control quantity. This field was used when starting the batch.

PL103	Z1 - GB Demonstration Company	USER CUSTSERV	19/11/96
			10:33:49
		A/P Session	1432
Batch number	<u>22236</u>		
Control value	<u>500.00</u>	Quantity	<u>50.000</u>

F8=Update session F10=Enter more items F15=Review session			
F23=Cancel session			
10-26	SF	MW	KS IM II KENB20A PET165S2

Fields:

Batch Number

The batch number of the batch you are working in is displayed.

Control Value

The original control value is displayed.

Quantity

The original quantity (if any) is displayed.

Accumulated Control Value

This field displays the actual total value you have entered so far in this batch. You can only change this value by re-entering the batch and changing existing entries or entering more.

Accumulated Quantity

This field displays the actual quantity you have entered so far in this batch. You can only change this value by re-entering the batch and changing existing entries or entering more.

Discrepancies Control Value

Any difference between the Control Value field and the Accumulated Control Value field is displayed here.

Any difference between the Quantity field and the Accumulated Quantity field is displayed here.

This discrepancy is simply a warning. You can:

- Go back into the batch to add item entries
- Alter the control value fields to match those accumulated during batch entry
- Ignore the discrepancy by entering **F8=Update Session** to update
- Press **F23=Cancel Session** to cancel the session altogether
- Review the session details using **F15=Review Session**, which enables you to delete items or to edit item text as desired

Discrepancies Quantity

Any difference between the Quantity field and the Accumulated Quantity field is displayed here. This discrepancy is simply a warning. You can:

- Go back into the batch to add item entries
- Alter the control value fields to match those accumulated during batch entry
- Ignore the discrepancy by entering **F8=Update Session** to update
- Press **F23=Cancel Session** to cancel the session altogether
- Review the session details using **F15=Review Session**, which enables you to delete items or to edit item text as desired

Functions:

F10

Enter More Items. Re-enters the batch to enable you to add items.

F15

Review Session. Redisplays the session details.

F23

Cancel Session. Cancels the session completely and deletes all entries. Press **F23=Cancel Session** again to confirm cancellation.

Review Session Details Screen

If you decide to review the items within the session, press **F15=Review Session**.

Opt	Our ref.	Supplier Name	Ledger Value	Prime Value

4=Delete item 8=Review text

F12=Previous

06-02 **SF** MW KS IM II EDN400A PCET02S3

Fields:

Opt

Option

4 - Delete the item.

8 - Display the item text.

Press **F12=Previous** to return to the session end screen.

Confirm Log Entries

2/APP

This option transfers one or more items from the log to the ledgers. On completion of each session, the Accounts Payable and General Ledger company information is updated.

You can correct various errors at the log to ledger posting stage. You can change an item logged against the wrong supplier, and amend posting details entered in the log.

If you use Purchase Management, this option is normally taken after an invoice has been matched to the purchase order. You can produce a report of matched items. This report should be run and matched items confirmed throughout the match but especially just before a period end. The process of matching will update the invoice dissections with GL accounts from the purchase order, and will cater for price variances.

If you use Job Management, you can enter costs and post to a holding account. At the first posting screen a window will display to ask for the type of job management posting being made.

Take the Confirm Log Entries option, and the Log Transfer screen is displayed.

Log Transfer Screen

Take the Confirm Log Entries option, and the Log Transfer screen is displayed.

If you are using batch control (this is specified in the company profile), this screen will display the batch control value and quantity. Otherwise, these fields will not be displayed on your screen.

F3=Exit		F12=Previous	
08-27	<u>SF</u>	MM	<u>KS</u>
		IM	II
		KENB20A	PET16SS2

Fields:

Document Type

You may only input one type of transaction per session. Enter one of the transaction types as follows:

IN - Invoices.

CR - Credit Notes.

JL - Journals.

Posting Period

The posting period defaults to the current Accounts Payable period, but may be changed to a future period if required. The period must exist on the calendar file.

Batch Number

Enter a batch number. This is recorded with the session control details for enquiry and reporting purposes. If the batch number has previously been used, a warning message is displayed. To override the warning, press **F19**.

Control Value

A batch total must be entered, but the value entered here does not restrict the value of documents subsequently entered. At end-of-batch, the value of documents entered is reconciled. Any discrepancy is highlighted but can be ignored.

Control Quantity

Enter the batch total for any quantities which are to be entered. This field is optional.

Confirm Items

If you wish the item entry screen to be re-displayed after input of each item to enable you to validate the input data, enter 1. Otherwise leave blank or enter 0.

Inter-Company Postings

Enter 1 if inter-company postings are to be allowed for this supplier, otherwise enter 0 or blank.

Cross Period

Enter 1 if the posting is to be made from one period to another.

When you have completed these fields to your satisfaction, press **Enter** to see the Invoice Log Transfer screen.

Invoice Log Transfer Screen

Press **Enter** on the Log Transfer screen to see the Invoice Log Transfer screen.

The Invoice Log Transfer screen enables you to select the single item to be transferred, or a range of items.

		EDN400A	PCET02S3

Fields:

Supplier Text

If * is displayed, this indicates that there is text for this supplier. Enter 1 and press **Enter** if you wish to display it.

Our Reference

If the option to generate references automatically was taken at company profile level, this field is not displayed; a number is allocated. Otherwise, enter a unique reference for this document. This reference should be recorded on the source document.

Register

If active, the VAT register facility is provided to enable you to produce your VAT reports based on tax area. The codes are set up in General Ledger by the user, and relate to a particular tax office.

Protocol

If VAT registers are active, the protocol numbers are the sequential numbers of invoices to a particular register.

Press **F20** to display a window of valid protocol gaps and enter 1 beside a number to select it, otherwise type in the appropriate number directly.

Currency

The default is the supplier currency, but it may be changed.

This field is hidden if you are working in a single currency.

Period

For transfers and direct posting, this is the period to which this item will be posted. It defaults to the current Accounts Payable period but may be changed to a later period (though not to an earlier one). The period must be on the calendar file.

Tax Date

This is the date associated with this item for VAT purposes. If this is not entered, the document date will be used to establish the VAT period.

Document Date

Enter here the date printed on the document, not the date on which it was received by your company.

This date is used to calculate the due date for payment.

Reason Code

This code is not displayed for invoices.

This code is mandatory for credit notes and journals and provides more detailed analysis of the reasons for such postings. The code must have been set up on the Reason Codes file.

Supplier Reference

This is the reference the supplier has attached to the item. This field is optional, but if entered it must be a unique reference within this supplier, ensuring that an invoice is entered only once.

Gross

The total value of the item (including VAT).

For journal postings, the value may be positive or negative. A positive value increases the value owing to the supplier (in the same way as an invoice), with debits to the dissection and VAT accounts. A negative value reduces the value owing to the supplier (in the same way as a credit note).

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the **F17=Override Rate** function.

Currency Rate

If the currency rate code is not known, a rate specific to this document may be entered. The rate value entered will be used to convert the document gross value into the base currency value for this ledger. Up to five places of decimals may be specified.

Discount Rate

This figure represents the discount rate that is to be applied on settlement of this item.

If the option to change discount rates or value for this supplier is set to 1, then you may change this rate, and the new rate entered will override that specified for the supplier.

Discount Code

A discount code can be defined to hold the percentage discount structure of a particular supplier.

Discount Value

This figure represents the discount value that is to be applied on settlement of this item.

If the option to change discount rates or value for this supplier is set to 1, then you may change this value, and the new value entered will override that specified for the supplier.

Due Date

The payment due date is calculated automatically from the payment terms defined for the supplier, and is based on the document date. It may be changed for this transaction if the option to change it is set on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.).

Order Ref

Enter an order reference as required.

Ext Terms

If this item is to be paid by a series of instalments, enter the relevant extended terms code. These codes are defined in the Cash Management module.

Item entry will pay this item according to the terms used. On updating the item it is possible to amend the payment details within the extended terms code.

Status

Leave blank or enter a valid status code:

Blank - This will cause the item to be included in the automatic payment cycle when its due date is reached and the supplier is included.

1 - Select. This indicates that you have selected this item to be paid next time you run a 'payment due' report using selection method 2. (Selection method 2 enables items to be included in the payment run independent of their due date).

3 - Hold. This will cause this item to be held until subsequently released.

9 - Prompt Pay. This will cause this item to be included in the next automatic payment cycle should the supplier be included, irrespective of the supplier's payment terms.

Dist Code

Enter a distribution code that has been set up from the Accounts Payable Maintenance menu as a standard distribution profile.

0 - Both goods and VAT values are entered line by line.

1 - Enter the goods value, and VAT is calculated from it.

2 - The total value of the line is entered in the goods value and the system disaggregates the goods and VAT accordingly.

Cash VAT

Enter 1 if this is a cash-based VAT supplier, and the invoice is tax reclaimable only on payment.

Text

For invoices, credit notes and journals, up to 99 lines of text may be entered at this stage. Only one line is displayed here. The roll key may be used to display or enter further lines if required.

Desc

This field enables you to enter free-format narrative relating to this item.

Functions:

F12

Return to the 'select supplier' screen.

F15

Review a list of items entered in this batch.

F17

Change the current currency conversion rate.

F23

Cancel the session.

Job Management Type Of Entry Selection Window

If you have Job Management linked to Accounts Payable, the Type of Entry Selection window will display.

Fields:

What Type Of Document

- 1 - You are posting supplier invoices, credits or journals.
- 2 - You are posting employee expenses.

When you press **Enter** you are taken into Job Management, to the direct transaction entry screen or to the employee expenses screen. This will enable a complete Job Management breakdown of the Accounts Payable. It also enables multiple transactions to be entered against one invoice.

Note: The document type you select here will be used for the rest of this session.

When the batch of Account Payable invoices is complete, the system triggers simultaneous updates to the General Ledger and to Job Management, ensuring that both balance.

Direct Transactions Entry Screen

If you specified direct transactions in the window, the Direct Transactions Entry screen is displayed.

The job management version of direct transaction processing is done at this screen.

PL272		Z1 - Demonstration Company		User GBJBAMCB		15/11/96	
						14:20:36	
Recurring Profile Enquiry							
Recurring profile :		C001 60/ Daily / Constant / IN&PY

321000	Consumables	250.00					
326000	Packaging	250.00					
F3=Exit F12=Previous F22=Extensions							
01-02		SF		MW KS IM		II EDN400A PET16SS2	

Fields:

Control Total

The control totals come from the Account Payable batch and invoice total, not from Job Management.

Trans Source

The transaction source is pre-filled with 'PL' and cannot be changed.

Ext Reference

The external reference defaults to the supplier code.

Date

The date defaults to the document date and cannot be changed.

Quantity

The quantity defaults to that entered against the Accounts Payable GL dissection.

Cost

The cost defaults to the outstanding document value.

Currency

The currency defaults to that of the document and cannot be changed.

Functions:

F8

Returns you to the Accounts Payable supplier selection screen.

F23

The cancel batch key is not allowed in this case.

Note: Batch end and review procedures are the same as for the Direct Transactions option, with a discrepancy screen if it does not balance.

Employee Expenses Entry Screen

If you specified employee expenses in the window, then the system displays the standard Job Management screens for employee expenses, first the screen for entering the total (the Employee Expenses Entry screen), then the details screen (the Expenses Entry screen).

JM049	Z1 Amalgamated Amalgamations PLC	USER GBJBANB1	15/05/96
			14:07:28
Balance Sheet Costing Codes - Income

08-49	SF	MM	KS IM II KENB20A PET149S2

Leave the screen with Press F12=Previous or
F3=Exit.

Balance Sheet Costing Codes - Income Screen 2

If you specified employee expenses in the window, then the system displays the standard Job Management screens for employee expenses. The screen for entering the total (the Employee Expenses Entry screen) displays first then this details screen.

JM049		Z1 Amalgamated Amalgamations PLC		USER GBJBANB1	15/05/96
					14:07:42
Balance Sheet Costing Codes - Income					
Price types					
Price Type	Description	Posting Code			
0	FIXED PRICE	**BS01*****			
1	NON-CHARGEABLE	**BS02*****			
2	TIME & MATERIALS	**BS03*****			
F3=Exit F12=Previous					
00-51	SF	MM	KS	IM	II KENB20A PET149S2

The differences between expense processing within Accounts Payable and this 'stand-alone' version are as follows:

- The batch number and control totals come from the Accounts Payable invoice entry.
- 'Total Employee Expenses' is the total invoice value and is already displayed.
- **F23=** (cancel batch) is not allowed.
- **F8** end batch returns you to the supplier selection screen within Accounts Payable.
- Employee number is filled in if you are using the common supplier and employee codes as defined in the Job Management company profile.
- The details screen has no VAT fields, because the VAT is dealt with within Accounts Payable.

The processing on the details screen is identical to that described in the stand alone function.

Cross Periods Window

If you entered 1 in the Cross Period field on the first screen, a window enables you to specify the periods you wish to use.

Press **Enter**, then **Enter** again to proceed to the next screen.

Invoice Log Transfer Dissections Screen

When the Invoice Log Transfer Dissections screen appears, all the entries for the log item are displayed.

F4=Prompt	F8=Update Ledger	F11=Cancel item	F15=Amend item	F22=Desc
19-19	SR MW	KS IM	II EDN400A	PCET02S3

Fields:

Select

- 1 - To move a dissection line to the bottom of the screen for amendment.
- 2 - To see the account levels displayed.

Account

Enter the relevant General Ledger account code for this dissection.

Any extension codes defined to the account code selected will be displayed for review or amendment before the dissection is accepted.

VAT Code

A VAT code is set up in the General Ledger to carry not only a percentage rate but also to specify the General Ledger accounts for VAT postings for sales and purchases.

When posting transactions, the system calculates a VAT rate from the VAT and goods values entered, and compares it to the rate attached to this VAT code. If these are not the same (or are outside the tolerance levels defined in the General Ledger), then an error message is given.

Value

The value entered here depends upon the VAT calculation code on the previous screen.

If the VAT calculation code to be used is 0, then both the value and VAT of the dissection must be entered manually.

If the code is 1 AND the VAT field is zero, then the value must be entered manually and the system will calculate the VAT. The value entered will not be changed by this calculation.

If the code is 2, this means that when you enter the value field, the system will subtract the VAT from the value. The figure in the value field will therefore be reduced by the VAT value.

VAT Value

Enter the VAT value to be associated with the VAT code entered on this line.

VAT can be entered individually against relevant items, or posted as one figure against any one of these items, or posted as a separate figure on its own.

IC

If the General Ledger account is an inter company account, enter the relevant company here.

Quantity

Enter the quantity if required. This field is not mandatory, but the total quantity entered in a batch will be reconciled against the batch quantity total, if one was entered. The quantity will also be part of the transaction posted to the General Ledger.

Cross Period

If this dissection is to be spread across more than one period, enter 1 here. A range of periods will then be displayed for selection.

Description

Enter a description. This field is not used by the system.

If you want to amend a dissection, then enter a 1 beside the line to be amended and press **Enter**. The details of that line will be displayed at the bottom of the screen, and can be maintained.

Account Level Codes Window

If you want to see the account level codes for the dissection, enter 2 beside the line and press **Enter**. The Account Level Codes window will display the information.

When you have amended the entries to your satisfaction, press **F8** to confirm.

Functions:

F8

Update the Ledger with the information you have entered.

F11

Cancel the item being entered (not the entire session).

F15

Redisplay the header information for viewing or amending.

F20

Toggle between allowing input into the fields at the base of the screen, and allowing input into the fields listed at the top.

F22

Toggle between the General Ledger extension code(s) related to the dissection, and the description.

Extended Payment Terms Window

If the payment terms for the item you are posting involves extended payments, then when you make the posting a window will be displayed.

This screen displays the extended payment terms associated with the extended payment code of the item to be paid. Note that any changes made will affect this item only. Other items using the same extended payment code will be unaffected.

Fields:

Extended Terms

Enter a code and press **Enter** to see the extended terms associated with that code displayed.

Due Date

The due date of payment for the instalment on this line is displayed here. If you decide to change it, it will change for this item only. Other items using the same extended payments code will be unaffected.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.).

Payment Spread Amount

The payment value of the instalment on this line is displayed here. If you decide to change it, it will change for this item only. Other items using the same extended payments code will be unaffected.

Discount

The discount value of the instalment on this line is displayed here. If you decide to change it, it will change for this item only. Other items using the same extended payments code will be unaffected.

Payment Method

The payment method code for the instalment on this line is displayed here. If you decide to change it, it will change for this item only. Other items using the same extended payments code will be unaffected.

Payment Analysis Window

If the company you are working in and the supplier you are posting to are using 1099 tax reporting, then when you enter dissections anywhere in the system for that supplier, the 1099 analysis window will be displayed. This enables you to enter the values that you wish to be reported later.

Fields:

Code

Enter the analysis group code for the entered value.

Amount

Enter the value for the corresponding analysis group code.

Enter the values and analysis codes as appropriate and press **F8** to update.

Completing a Session Screen

When you press **F8** you are returned to the screen that started the session. This time, if you are using batch controls, the actual hash total accumulated during batch confirmation is displayed underneath the control value. An accumulated quantity figure is displayed for comparison with the control quantity (if this field was used when starting the batch).

PL103	Y0 - Education Company - Y0	USER FFV0	3/08/95
			11:23:32
		A/P Session	12
Batch Number	105		
Control Value	250.00	Quantity	.000
- accumulated	500.00		.000
DISCREPANCIES	250.00-		.000

F8=Update session	F10=Enter more items	F15=Review session	
F23=Cancel session			
07-24	SP	MW	KS IM II EDN400A PCET02S3

Any difference between these figures is shown as a discrepancy, and appears below the accumulated line. Such a discrepancy is simply a warning. You may:

- Go back into the batch to add item entries
- Alter the control value fields to match those accumulated during batch entry
- Ignore the discrepancy by entering **F8** to update
- Press **F23** to cancel the session altogether
- Review the session details using **F15**, which enables you to delete items or to edit item text as desired

Functions:

F10

Re-enters the batch to enable you to add items.

F15

Redisplays the session details.

F23

Cancel the session completely and delete all entries. Press **F23** again to confirm cancellation.

Review Session Details Screen

If you decide to review the items within the session, press **F15** and the Review Session Details screen is displayed.

PL103	Y0 - Education Company - Y0	USER FFY0	3/08/95

-  Select your item with 4 to delete, or 8 to display the item text. If you enter 4 the item details will be displayed with a message asking you to confirm the delete by pressing **F11**.
-  If you enter 8 the item text will be displayed.
-  Press **F12** to return to the session end screen.

Volume Log to Ledger Transfer

3/APP

This facility enables you to transfer many supplier items from the log to the ledger in one simple operation.

Take the Volume Log to Ledger Transfer option from the Processing menu, and the Volume Log to Ledger Transfer screen is displayed.

Select Supplier Screen

Fields:

Supplier

Enter the relevant supplier.

Location

If you wish to review a list of items for a certain location, enter that location here.

You can further specify the items you wish to review by entering both a supplier and a location.

If you leave both fields blank, a list of all the open ledger items will be displayed.

Press **Enter** to display the details requested.

Invoice Volume Log to Ledger Transfer Screen

A list of items that fulfil the selection criteria of the Select Supplier screen is now displayed.

PL103	Y0 - Education Company - Y0			User FFV0	3/08/95

- Select items for transfer by entering 1 beside them. Press **F8=Confirm**
- Select for transfer all items which have been matched by the Purchase Management module by pressing **F22=Select All Matched**

End Batch Screen

When you have confirmed the transfers, the batch end screen is displayed.

Invoices which contain invalid data - for example, an incorrect GL code due to non validation at the time of logging, or which have been partially matched in Purchase Management rather than fully matched - will not be transferred from the log to the ledger, but will appear on an exception report advising that the items were not eligible for transfer. These items have to be transferred using confirm log entries option.

Fields:

Our Reference

If the option to generate references automatically was taken at company profile level, this field is not displayed; a number is allocated. Otherwise, enter a unique reference for this document. This reference should be recorded on the source document.

Register

If active, the VAT register facility is provided to enable you to produce your VAT reports based on tax area. The codes are set up in General Ledger by the user, and relate to a particular tax office.

Protocol

If VAT registers are active, the protocol numbers are the sequential numbers of invoices to a particular register.

Press **F20** to display a window of valid protocol gaps and enter 1 beside a number to select it, otherwise type in the appropriate number directly.

Currency

The default is the supplier currency, but it may be changed.

This field is hidden if you are working in a single currency.

Period

For transfers and direct posting, this is the period to which this item will be posted. It defaults to the current Accounts Payable period but may be changed to a later period (though not to an earlier one). The period must be on the calendar file.

Tax Date

This is the date associated with this item for VAT purposes. If this is not entered, the document date will be used to establish the VAT period.

Document Date

Enter here the date printed on the document, not the date on which it was received by your company.

This date is used to calculate the due date for payment.

Reason Code

This code is not displayed for invoices.

This code is mandatory for credit notes and journals and provides more detailed analysis of the reasons for such postings. The code must have been set up on the Reason Codes file.

Supplier Reference

This is the reference the supplier has attached to the item. This field is optional, but if entered it must be a unique reference within this supplier, ensuring that an invoice is entered only once.

Gross

The total value of the item (including VAT).

For journal postings, the value may be positive or negative. A positive value increases the value owing to the supplier (in the same way as an invoice), with debits to the dissection and VAT accounts. A negative value reduces the value owing to the supplier (in the same way as a credit note).

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the F17 function.

Currency Rate

If the currency rate code is not known, a rate specific to this document may be entered. The rate value entered will be used to convert the document gross value into the base currency value for this ledger. Up to five places of decimals may be specified.

Discount Rate

This figure represents the discount rate that is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this rate, and the new rate entered will override that specified for the supplier.

Note: The rate and the value cannot both be used.

Discount Code

A discount code can be defined to hold the percentage discount structure of a particular supplier. This is displayed here.

Discount Value

This figure represents the discount value that is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this value, and the new value entered will override that specified for the supplier.

Due Date

The payment due date is calculated automatically from the payment terms defined for the supplier, and is based on the document date. It may be changed for this transaction if the option to change it is set on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.).

Location Code

This field is used only for posting to the log.

Enter the appropriate code to indicate where this item is to be sent for authorisation.

Order Ref

Enter an order reference as required.

Ext Terms

If this item is to be paid by a series of instalments, enter the relevant extended terms code. These codes are defined in the Cash Management module.

Item entry will pay this item according to the terms used. On updating the item it is possible to amend the payment details within the extended terms code.

Status

Blank - This will cause the item to be included in the automatic payment cycle when its due date is reached and the supplier is included.

1 - Select. This indicates that you have selected this item to be paid next time you run a 'payment due' report using selection method 2. (Selection method 2 enables items to be included in the payment run independent of their due date.)

3 - Hold. This will cause this item to be held until released.

9 - Prompt Pay. This will cause this item to be included in the next automatic payment cycle should the supplier be included, irrespective of the supplier's payment terms.

Dist Code

Enter a distribution code which has been set up from the Accounts Payable Maintenance menu as a standard distribution profile.

When you enter the dissection screen, the General Ledger accounts specified for this distribution code will be entered automatically. Depending on the type of distribution code, the gross value may also have been automatically spread over the accounts.

VAT Calculation

The value entered here will dictate how VAT is calculated for the dissection lines.
The available values are:

- 0 - Both goods and VAT values are entered line by line.
- 1 - Enter the goods value, and VAT is calculated from it.
- 2 - The total value of the line is entered in the goods value and the system disaggregates the goods and VAT accordingly.

Cash VAT

Enter 1 if this is a cash-based VAT supplier, and the invoice is tax reclaimable only on payment.

Text

For invoices, credit notes and journals, up to 99 lines of text may be entered at this stage. Only one line is displayed here. The roll key may be used to display or enter further lines if required.

Desc

This field enables you to enter free-format narrative relating to this item.

Functions:

F17

Change the current currency conversion rate.

Currency Conversion Window (F17)

If you have entered a currency other than the base currency, you may override the default currency conversion rate by pressing **F17**.

F4=Prompt	F8=Update Log	F11=Cancel item	F15=Amend item	F22=Desc
19-19	SF MW	KS IM	II EDN400A	PCET02S3

Fields:

Select

- 1 - To move a dissection line to the bottom of the screen for amendment.
- 2 - To see the account levels displayed.

Account

Enter the relevant General Ledger account code for this dissection.

Any extension codes defined to the account code selected will be displayed for review or amendment before the dissection is accepted.

VAT Code

A VAT code is set up in the General Ledger to carry not only a percentage rate but also to specify the General Ledger accounts for VAT postings for sales and purchases.

When posting transactions, the system calculates a VAT rate from the VAT and goods values entered, and compares it to the rate attached to this VAT code. If these are not the same (or are outside the tolerance levels defined in the General Ledger), then an error message is given.

Note that if the 'Validate Accounts' and 'Validate VAT' fields are set to 0 on the company profile, then these codes need not be entered.

Value

The value entered here depends upon the VAT calculation code on the previous screen.

If the VAT calculation code to be used is 0, then both the value and VAT of the dissection must be entered manually.

If the code is 1 AND the VAT field is zero, then the value must be entered manually and the system will calculate the VAT. The value entered will not be changed by this calculation.

If the code is 2, this means that when you enter the value field, the system will subtract the VAT from the value. The figure in the value field will therefore be reduced by the VAT value.

VAT Value

Enter the VAT value to be associated with the VAT code entered on this line.

VAT can be entered individually against relevant items, or posted as one figure against any one of these items, or posted as a separate figure on its own.

IC

If the General Ledger account is an inter company account, enter the relevant company here.

Quantity

Enter the quantity if required. This field is not mandatory, but the total quantity entered in a batch will be reconciled against the batch quantity total, if one was entered. The quantity will also be part of the transaction posted to the General Ledger.

Description

Enter a description. This field is not used by the system.

If you want to amend a dissection, then enter a 1 beside the line to be amended and press **Enter**. The details of that line will be displayed at the bottom of the screen, and can be maintained.

If you want to see the account level codes for the dissection, enter 2 beside the line and press **Enter**. A window will display the information:

Press **F12** to return to the main screen, and press **F8** to update with your amendments.

Journal Log Entry

6/APP

Although journals can be entered directly into the ledger, it is more usual to enter them first as log items, where they await approval for payment, and then to confirm them (i.e. transfer them to the ledger) as a separate operation.

Only postings of the type 'JL' can be entered using this option.

Refer to the section *Item Entry* for details of how to make a log posting. The procedure is exactly the same for making a journal log posting.

Direct Posting

11/APP

The use of logs, though recommended, is not mandatory, and items can be posted directly into the ledger from option 11 on the Processing menu. The sequence and style of entry screens is the same here as when entering log items. Notice that a posting period is assigned when posting directly to the ledger.

Take the *Direct Posting* option and the Ledger Posting screen will be displayed to enable you to enter the batch control value and quantity, if you have decided to use batch control. If you decide not to, these fields will not be displayed on your screen.

Ledger Posting Screen

The Ledger Posting screen will be displayed to enable you to enter the batch control value and quantity, if you have decided to use batch control. If you decide not to, these fields will not be displayed on your screen.

PL103	Z1 - GB Demonstration Company	USER CUSTSERV	19/11/96

Confirm items -			
Inter-company -			
Cross period 0			
F3=Exit		F12=Previous	
18-27	SF	MW	KS IM II KENB20A PET16SS2

Fields:

Document Type

You may only input one type of transaction per session. Enter one of the transaction types as follows:

IN - Invoices.

CR - Credit notes.

Posting Period

The posting period defaults to the current Accounts Payable period, but may be changed to a future period if required. The period must exist on the calendar file.

Batch Number

The batch number assigned by the user is recorded with the session control details for enquiry/reporting purposes. If the batch number has previously been used, a warning message is displayed. To override the warning, press F19.

Control Value

A batch total must be entered, but the value entered here does not restrict the value of documents subsequently entered. At end-of-batch, the value of documents entered is reconciled. Any discrepancy is highlighted but can be ignored.

Control Quantity

Enter the batch total for any quantities that are to be entered.

Confirm Items

If you wish the item entry screen to be re-displayed after input of each item to enable you to validate the input data, enter 1. Otherwise leave blank or enter 0.

Supplier Select

This field governs the sequence of screens.

0 - (or Blank) On completion of each item a screen will be displayed for entry of another item for the same supplier (F12 will enable you to select another supplier).

1 - On completion of each item the supplier selection screen will be displayed.

Inter-Company Postings

Enter 1 if inter-company postings are to be allowed for this supplier, otherwise enter 0 or blank.

Cross Period

Enter 1 if the posting is to be made from one period to another.

Note: The option to use batch totals when entering transactions is specified in the company profile. If you have chosen to use batch totals then the batch number, control value and control quantity fields will be displayed on the screen; otherwise the fields are hidden. Of the three batch control fields, the use of the control quantity field is optional while entry of the batch number and control value is mandatory.

When you have completed these fields to your satisfaction, press **Enter**.

Select Supplier Screen

Once you have completed the above screen and pressed **Enter** the following fields will be displayed to enable you to select the supplier and to maintain supplier text if you wish to.

Fields:

Supplier

Enter a valid supplier account code. If the supplier code is unknown, enter a ? in this field and press F4 to see a list of accounts.

Supplier Text

Enter 1 to display any text held against this supplier. The text is displayed, but cannot be amended by this procedure.

Reverse Sign

If you are posting a credit and you are using the reverse sign function (set up in country-specific parameters), then the reverse sign field will be displayed.

Enter 1 to reverse the sign.

This function is used mainly to correct a previous entry, and is available only when entering a posting type of CR (credit) or JL (journal - via Journal Log Entry).

Functions:

F8

End the session you are in. You will be returned to the batch end screen, and the procedure will be found towards the end of this section.

F15

Review a list of items entered so far in this batch.

F23

Cancel the session.

Press **Enter**. If you entered 1 to see the supplier text, this will now be displayed. Otherwise the Invoice Posting screen is displayed.

Invoice Posting Screen

When you have completed the header screen and pressed **Enter**, you will see the Invoice Posting screen.

Fields:

Supplier Text

If * is displayed, this indicates that there is text for this supplier. Enter 1 and press **Enter** if you wish to display it.

Our Reference

If the option to generate references automatically was taken at company profile level, this field is not displayed; a number is allocated. Otherwise, enter a unique reference for this document.

This reference should be recorded on the source document.

Register

If active, the VAT register facility is provided to enable you to produce your VAT reports based on tax area. The codes are set up in General Ledger by the user, and relate to a particular tax office.

Protocol

If VAT registers are active, the protocol numbers are the sequential numbers of invoices to a particular register.

Press **F20** to display a window of valid protocol gaps and enter 1 beside a number to select it, otherwise type in the appropriate number directly.

Currency

The default is the supplier currency, but it may be changed.

This field is hidden if you are working in a single currency.

Period

For transfers and direct posting, this is the period to which this item will be posted. It defaults to the current Accounts Payable period but may be changed to a later period (though not to an earlier one). The period must be on the calendar file.

Tax Date

This is the date associated with this item for VAT purposes. If this is not entered, the document date will be used to establish the VAT period.

Document Date

Enter here the date printed on the document, not the date on which it was received by your company.

This date is used to calculate the due date for payment.

Reason Code

This code is not displayed for invoices.

This code is mandatory for credit notes and journals and provides more detailed analysis of the reasons for such postings. The code must have been set up on the Reason Codes file.

Supplier Reference

This is the reference the supplier has attached to the item. This field is optional, but if entered it must be a unique reference within this supplier, ensuring that an invoice is entered only once.

Gross

The total value of the item (including VAT).

For journal postings, the value may be positive or negative. A positive value increases the value owing to the supplier (in the same way as an invoice), with debits to the dissection and VAT accounts. A negative value reduces the value owing to the supplier (in the same way as a credit note).

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the **F17** function.

Currency Rate

If the currency rate code is not known, a rate specific to this document may be entered. The rate value entered will be used to convert the document gross value into the base currency value for this ledger. Up to five places of decimals may be specified.

Discount Rate

This figure represents the discount rate that is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this rate, and the new rate entered will override that specified for the supplier.

Discount Code

A discount code can be defined to hold the percentage discount structure of a particular supplier.

Discount Value

This figure represents the discount value that is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this value, and the new value entered will override that specified for the supplier.

Note that the rate and the value cannot both be used.

Due Date

The payment due date is calculated automatically from the payment terms defined for the supplier, and is based on the document date. It may be changed for this transaction if the option to change it is set on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your country specific parameters must be set up for this in General Ledger.)

Order Ref

Enter an order reference as required.

Ext Terms

If this item is to be paid by a series of instalments, enter the relevant extended terms code. These codes are defined in Cash Management.

Item entry will pay this item according to the terms used. On updating the item it is possible to amend the payment details within the extended terms code.

Status

Blank - This will cause the item to be included in the automatic payment cycle when its due date is reached and the supplier is included.

1 - Select. This indicates that you have selected this item to be paid next time you run a 'payment due' report using selection method 2. (Selection method 2 enables items to be included in the payment run independent of their due date.)

3 - Hold. This will cause this item to be held until subsequently released.

9 - Prompt Pay. This will cause this item to be included in the next automatic payment cycle should the supplier be included, irrespective of the supplier's payment terms.

Dist Code

Enter a distribution code that has been set up from the Accounts Payable Maintenance menu as a standard distribution profile.

When you enter the dissection screen, the General Ledger accounts specified for this distribution code will be entered automatically. Depending on the type of distribution code, the gross value may also have been automatically spread over the accounts.

VAT Calculation

The value entered here will dictate how VAT is calculated for the dissection lines.
The available values are:

- 0 - Both goods and VAT values are entered line by line.
- 1 - Enter the goods value, and VAT is calculated from it.
- 2 - The total value of the line is entered in the goods value and the system disaggregates the goods and VAT accordingly.

Cash VAT

Enter 1 if this is a cash-based VAT supplier, and the invoice is tax reclaimable only on payment.

Text

For invoices, credit notes and journals, up to 99 lines of text may be entered at this stage. Only one line is displayed here. The roll key may be used to display or enter further lines if required.

Desc

This field enables you to enter free-format narrative relating to this item.

Functions:

F8

End your current session. You will be returned to the batch end screen, and the procedure will be found towards the end of this section.

F4=Prompt F15=Amend item			
19-19	SR	MW	KS IM II EDN400A PCET0283

Fields:

Account Code

If a default purchasing account is specified for this supplier, it is displayed, but may be amended.

For items being confirmed and for direct postings, this must be a valid General Ledger account code.

The account code may be blank for a VAT only line.

Value

The value entered here depends upon the VAT calculation code to be used.

If the VAT calculation code to be used is 0, then both the value and VAT of the dissection must be entered manually and will not be calculated.

If it is 1, AND the VAT field equals zero, then the value must be entered, and the system will calculate the VAT. The value entered will therefore not change.

If the VAT calculation code is 2, this means that when you enter the value field, the system will subtract the VAT from this amount. The figure in the value field will thus be reduced.

If a default VAT code is set up for this supplier, then the first dissection line to be entered will use the VAT calculation code 2, REGARDLESS of the VAT code entered on this screen.

If no default is available, or if this is not the first dissection to be entered, then the VAT code used will be the one on the screen.

VAT Code

A VAT code is set up in the General Ledger to carry not only a percentage rate (in Britain, for example, the code STD might carry a rate of 17.5%), but also to specify the General Ledger accounts for VAT postings for sales and purchases.

When posting transactions, the system calculates a VAT rate from the VAT and goods values entered, and compares it to the rate attached to this VAT code. If these are not the same (or are outside the tolerance levels defined in the General Ledger), then an error message is given.

VAT Value

This is the VAT amount to be associated with the VAT code entered on this line. VAT can be entered individually against relevant items, or posted as one figure against any one of these items, or posted as a separate figure on its own.

IC

If the General Ledger account is an inter company account, enter the relevant company here.

Quantity

Enter the quantity if required. This field is not mandatory, but the total quantity entered in a session will be reconciled against the batch quantity total, if one was entered. The quantity will also be part of the transaction posted to the General Ledger.

Cross Period

Enter 1 if the posting is to be made from one period to another.

Description

Up to thirty characters can be entered as a description against this dissection line.

If you want to amend a dissection, then enter a 1 beside the line to be amended and press **Enter**. The details of that line will be displayed at the bottom of the screen, and can be maintained.

Display Account Levels Window (Option 2)

If you want to see the account level codes for the dissection, enter 2 beside the line and press **Enter**. The Display Account Levels window will display the information.

How VAT is Calculated

If a default purchasing account is specified for this supplier, it is displayed, but may be amended. The default goods and VAT values are also calculated, based on the gross value of the transaction and the VAT code for this supplier. For example, if the gross value is 100.00 and the VAT rate is 17.5%, the goods value is 85.11 and the VAT 14.89.

If settlement discount applies to this transaction, the calculation of VAT depends on the discount basis of the VAT record. See the VAT subsystem in the General Ledger for a description of VAT codes and rates.

When you have entered all the items for the supplier, press **F8**.

Functions:

F7

Ratios/spread factors toggle.

F8

Update the Ledger with the information you have entered.

F11

Cancel the item being entered (not the entire session).

F15

Redisplay the header information for viewing or amending.

F20

Toggle between allowing input into the fields at the base of the screen, and allowing input into the fields listed at the top.

F22

Toggle between the General Ledger extension code(s) related to the dissection, and the description.

Extended Payment Terms Window

If the payment terms for the item you are posting involves extended payments, then when you make the posting (by pressing **F8**) a window will be displayed.

This screen displays the extended payment terms associated with the extended payment code of the item to be paid. Note that any changes made will affect this item only. Other items using the same extended payment code will be unaffected.

Fields:

Extended Terms

Enter a code and press Enter to see the extended terms associated with that code displayed.

Due Date

The due date of payment for the instalment on this line is displayed here. If you decide to change it will change for this item only. Other items using the same extended payments code will be unaffected.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.).

Payment Spread Amount

The payment value of the instalment on this line is displayed here. If you decide to change it will change for this item only. Other items using the same extended payments code will be unaffected.

Discount

The discount value of the instalment on this line is displayed here. If you decide to change it will change for this item only. Other items using the same extended payments code will be unaffected.

Payment Method

The payment method code for the instalment on this line is displayed here. If you decide to change it will change for this item only. Other items using the same extended payments code will be unaffected.

Functions:

F8

Update the extended terms with any amendments made. These amendments will affect only this payment, and other items using the same extended payments code will be unaffected.

F11

Delete the extended terms definition for this payment.

Payment Analysis Window

If you are using payment analysis, or if the company you are working in and the supplier you are posting to are using 1099 tax reporting, then when you enter dissections anywhere in the system for that supplier, the payment analysis/1099 window will be displayed. This enables you to enter the values which you wish to be reported later.

Fields:

Code

Enter the analysis group code for the entered value.

Amount

Enter the value for the corresponding analysis group code.

Enter the values and analysis codes as appropriate and press **F8** to update.

Completing a Session Screen

If you are using batch controls, the actual hash total accumulated during batch entry is displayed underneath the control value, and an accumulated quantity figure is displayed for comparison with the control quantity (if this field was used when starting the batch).

Press **F8** to return to the screen that started the session.

PL103	Y0 - Education Company - Y0	USER FFV0	3/08/95
			12:09:27
		A/P Session	14
Batch Number	110		
Control Value	117.50	Quantity	.000
- accumulated	117.50		.000
No. of docs. entered	1		
F8=Update session F10=Enter more items F15=Review session			
F23=Cancel session			
07-24	SF	MW	KS IM II EDN400A PCET02S3

Any difference between these figures is shown as a discrepancy, and appears below the accumulated line. Such a discrepancy is simply a warning. You may:

- Go back into the batch to add item entries
- Alter the control value fields to match those accumulated during batch entry
- Ignore the discrepancy by entering **F8** to update
- Press **F23** to cancel the session altogether
- Review the session details using **F15**, which enables you to delete items or to edit item text as desired

Functions:

F10

Re-enters the batch to enable you to add items.

F15

Redisplays the session details.

F23

Cancels the session completely and deletes all entries. Press F23 again to confirm cancellation.

Review Session Details Screen

If you decide to review the items within the session, press **F15**.

PL103	Y0 - Education Company - Y0	USER FFY0	3/08/95

F12=Previous			
06-02	SF	MW	KS IM II EDN400A PCET02S3

Select your item with 4 to delete, or 8 to display the item text. If you enter 4 the item details will be displayed with a message asking you to confirm the delete by pressing **F11**.

If you enter 8 the item text will be displayed.

Press **F12** to return to the session end screen.

Journal Direct Posting

13/APP

This option enables you to post a journal directly to the General Ledger without the use of the log facility.

Only postings of the type JL (journal) can be entered.

Refer to the section entitled Direct Posting for details on how to make a direct posting. The procedure is exactly the same when posting a journal directly into the General Ledger.

Maintain Items

4/APP

This option enables you to change the location code attached to an item in order to record its progress through your authorisation procedures, or to delete a log item. Many items may be amended or deleted en bloc.

Take the Maintain Items option. The Maintain Log Items Selection screen is displayed.

Maintain Log Items Selection Screen

Take the Maintain Items option. The Maintain Log Items Selection screen is displayed.

Fields:

Supplier Range

Enter here the range of suppliers whose items you want to see displayed for maintenance.

To see items for a single supplier, enter that supplier in the 'from' field and leave the 'to' field blank.

To see items for all suppliers up to a certain supplier, enter that supplier in the 'to' field and leave the 'from' field blank.

Location Range

Enter here the range of locations whose items you want to see displayed for maintenance.

To see items for a single location, enter that location in the 'from' field and leave the 'to' field blank.

To see items for all locations up to a certain location, enter that location in the 'to' field and leave the 'from' field blank.

Press **Enter** to see the Maintain Log Items screen.

Maintain Log Items Screen 1

Press **Enter** on the Maintain Log Items Selection screen to see the first Maintain Log Items screen. This lists all the outstanding items on the log which satisfy your selection criteria. The values are displayed in the prime currency of the transaction.

Item Duplication And Item Duplication Match

Two menu options are available:

- Item Duplication (Invoice Log)
- Item duplication/Match (Transaction)

Item Duplication

7/APP

This option enables you to create a credit note by specifying the invoice, or vice versa.

- Only invoices and credit notes can be duplicated, not journal transactions.
- Duplication cannot take place between suppliers; only within one supplier.
- Log items cannot be used as the item to be duplicated, but the new item will be a log item.

Take the Item Duplication option to see the Item Duplication screen.

Item Duplication Screen

Take the Item Duplication option to see the Item Duplication screen.

Fields:

New Item Type

Enter the item reference of the item you wish to match. The valid values are:

IN - Invoice

CR - Credit note

Duplicate Item

Enter the item on which the new item is to be based.

This item must not be paid, part paid or be in the process of being paid if you are matching an invoice with a credit note or vice versa.

Supplier

Enter the supplier of the duplicate item.

Reverse Sign

0 - No reverse sign posting.

1 - Reverse sign.

Enter the reference of the invoice for which you wish to create a matching credit (or vice versa), and press **Enter** to see the header details displayed.

Fields:

Our Reference

If the option to generate references automatically was taken at company profile level, this field is not displayed; a number is allocated.

This reference should be recorded on the source document.

Register

If active, the VAT register facility is provided to enable you to produce your VAT reports based on tax area. The codes are set up in General Ledger by the user, and relate to a particular tax office.

Protocol

If VAT registers are active, the protocol numbers are the sequential numbers of invoices to a particular register.

Press **F20** to display a window of valid protocol gaps and enter 1 beside a number to select it, otherwise type in the appropriate number directly.

Period

For transfers and direct posting, this is the period to which this item will be posted. It defaults to the current Accounts Payable period but may be changed to a later period (though not to an earlier one). The period must be on the calendar file.

Tax Date

This is the date associated with this item for VAT purposes. If this is not entered, the document date will be used to establish the VAT period.

Document Date

Enter here the date printed on the document, not the date on which it was received by your company.

This date is used to calculate the due date for payment.

Reason Code

This code is mandatory for credit notes and journals and provides more detailed analysis of the reasons for such postings. The code must have been set up on the Reason Codes file.

Supplier Reference

This is the reference the supplier has attached to the credit note. This field is optional, but if entered it must be a unique reference within this supplier, ensuring that an item is entered only once.

Gross

The total value of the item (including VAT).

If you are basing a credit on an invoice, then this value must be less than or equal to the invoice document value.

If you are basing an invoice on a credit, then this value must be greater than or equal to the credit document value.

In either case, if the credit note is less than the invoice, an adjustment or part payment can be made.

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the **F17=Override Rate** function.

Currency Rate

If the currency rate code is not known, a rate specific to this document may be entered. The rate value entered will be used to convert the document gross value into the base currency value for this ledger. Up to five places of decimals may be specified.

Discount Rate

This figure represents the discount rate which is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this rate, and the new rate entered will override that specified for the supplier.

Note that the rate and the value cannot both be used.

Discount Code

A discount code can be defined to hold the percentage discount structure of a particular supplier.

Discount Value

This figure represents the discount value which is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this value, and the new value entered will override that specified for the supplier.

Note that the rate and the value cannot both be used

Due Date

The payment due date is calculated automatically from the payment terms defined for the supplier, and is based on the document date. It may be changed for this transaction if the option to change it is set on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.).

Order Ref

Enter an order reference as required.

Ext Terms

If this item is to be paid by a series of instalments, enter the relevant extended terms code. These codes are defined in the Cash Management module.

Item entry will pay this item according to the terms used. On updating the item it is possible to amend the payment details within the extended terms code.

Status

Leave blank or enter a valid status code:

Blank - This will cause the item to be included in the automatic payment cycle when its due date is reached and the supplier is included.

1 - Select. This indicates that you have selected this item to be paid next time you run a 'payment due' report using selection method 2. (Selection method 2 enables items to be included in the payment run independent of their due date.)

3 - Hold. This will cause this item to be held until subsequently released.

9 - Prompt Pay. This will cause this item to be included in the next automatic payment cycle should the supplier be included, irrespective of the supplier's payment terms.

Dist Code

Optionally enter a distribution code that has been set up from the Accounts Payable Maintenance menu as a standard distribution profile.

When you enter the dissection screen, the GL accounts for this distribution code will be entered automatically. Depending on the type of distribution code, the gross value may also have been automatically spread over the accounts.

VAT Calculation

The value entered here will dictate how VAT is calculated for the dissection lines. The available values are:

0 - Both goods and VAT values are entered line by line.

1 - Enter the goods value, and VAT is calculated from it.

2 - The total value of the line is entered in the goods value and the system disaggregates the goods and VAT accordingly.

Cash VAT

Enter 1 if this is a cash-based VAT supplier, and the invoice is tax reclaimable only on payment.

Text

For invoices, credit notes and journals, up to 99 lines of text may be entered at this stage. Only one line is displayed here. The roll key may be used to display or enter further lines if required.

Desc

This field enables you to enter free-format narrative relating to this item.

Currency Conversion Window (F17)

If you wish to override the currency conversion rate or value, press **F17** to display the Override Conversion Parameters window.

F4=Prompt	F8=Update Ledger	F15=Amend item	F22=Desc	
19-19	SF MW KS IM	II EDN400A	PCET02S3	

Fields:

Select

- 1 - To move a dissection line to the bottom of the screen for amendment.
- 2 - To see the account levels displayed.

Account

Enter the relevant General Ledger account code for this dissection.

Any extension codes defined to the account code selected will be displayed for review or amendment before the dissection is accepted.

VAT Code

A VAT code is set up in the GL to carry not only a percentage rate but also to specify the GL accounts for VAT postings.

When posting transactions, the system calculates a VAT rate from the VAT and goods values entered, and compares it to the rate attached to this VAT code. If these are not the same (or are outside the tolerance levels defined in the GL), then an error message is given.

Value

The value entered here depends upon the VAT calculation code on the previous screen.

If the VAT calculation code to be used is 0, then both the value and VAT of the dissection must be entered manually.

If the code is 1 AND the VAT field is zero, then the value must be entered manually and the system will calculate the VAT. The value entered will not be changed by this calculation.

If the code is 2, this means that when you enter the value field, the system will subtract the VAT from the value. The figure in the value field will therefore be reduced by the VAT value.

VAT Value

Enter the VAT value to be associated with the VAT code entered on this line.

VAT can be entered individually against relevant items, or posted as one figure against any one of these items, or posted as a separate figure on its own.

IC

If the General Ledger account is an inter company account, enter the relevant company here.

Quantity

Enter the quantity if required. This field is not mandatory, but the total quantity entered in a batch will be reconciled against the batch quantity total, if one was entered. The quantity will also be part of the transaction posted to the General Ledger.

Cross Period

1 - The posting is to be split across G/L periods.

Description

Enter a description. This field is not used by the system.

Note: The dissections may be amended as required.

If you enter 2 beside a dissection, the account levels for the individual posting are displayed.

Functions:

F7

Ratios/spread factors toggle.

F12

Update the Ledger with the information you have entered.

F15

Redisplay the header information for viewing or amending.

F20

Toggle between allowing input into the fields at the base of the screen, and allowing input into the fields listed at the top.

F22

Toggle between the General Ledger extension code(s) related to the dissection, and the description.

Press **F8** when you are ready to update.

Item Duplication/Match

14/APP

It is a common requirement to enter a credit note that matches the value of a specific invoice for a supplier. This option enables you to create a credit note by specifying the invoice itself.

- Only invoices and credit notes can be duplicated, not journal transactions.
- Duplication cannot take place between suppliers; only within one supplier.
- Log items cannot be duplicated.

Take the Item Duplication/Match option from the Processing menu to see the Item Duplication screen.

Item Duplication Screen

Fields:

New Item Type

Enter the item reference of the item you wish to match. The valid values are:

IN - Invoice

CR - Credit note

Duplicate Item

Enter the item on which the new item is to be based.

This item must not be paid, part paid or be in the process of being paid if you are matching a credit note with an invoice or vice versa.

Supplier

Enter the supplier of the duplicate item.

Reverse Sign

0 - No reverse sign posting.

1 - Reverse sign.

Enter the reference of the invoice for which you wish to create a matching credit, and press **Enter** to see the header details displayed:

Fields:

Our Reference

If the option to generate references automatically was taken at company profile level, this field is not displayed; a number is allocated. Record this reference on the source document.

Register

If active, the VAT register facility is provided to enable you to produce your VAT reports based on tax area. The codes are set up in General Ledger by the user, and relate to a particular tax office.

Protocol

If VAT registers are active, the protocol numbers are the sequential numbers of invoices to a particular register.

Press F20 to display a window of valid protocol gaps and enter 1 beside a number to select it, otherwise type in the appropriate number directly.

Period

For transfers and direct posting, this is the period to which this item will be posted. It defaults to the current Accounts Payable period but may be changed to a later period (though not to an earlier one). The period must be on the calendar file.

Tax Date

This is the date associated with this item for VAT purposes. If this is not entered, the document date will be used to establish the VAT period.

Document Date

Enter here the date printed on the document, not the date on which it was received by your company.

This date is used to calculate the due date for payment.

Reason Code

This code is mandatory for credit notes and journals and provides more detailed analysis of the reasons for such postings. The code must have been set up on the Reason Codes file.

Supplier Reference

This is the reference the supplier has attached to the credit note. This field is optional, but if entered it must be a unique reference within this supplier, ensuring that an item is entered only once.

Gross

The total value of the item (including VAT).

If you are basing a credit on an invoice, then this value must be less than or equal to the invoice document value.

If you are basing an invoice on a credit, then this value must be greater than or equal to the credit document value.

In either case, if the credit note is less than the invoice, an adjustment or part payment can be made.

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the F17 function.

Currency Rate

If no currency rate code exists, enter a rate specific to this item. It will be used to convert the item gross value into the base currency for this ledger.

Discount Rate

This figure represents the discount rate that is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this rate, and the new rate entered will override that specified for the supplier.

Note that the rate and the value cannot both be used.

Discount Code

A discount code can be defined to hold the percentage discount structure of a particular supplier.

Discount Value

This figure represents the discount value that is to be applied on settlement of this item.

If the option to change discount rates or value for this supplier is set to 1, then you may change this value, and the new value entered will override that specified for the supplier.

Due Date

The payment due date is calculated automatically from the payment terms defined for the supplier, and is based on the document date. It may be changed for this transaction if the option to change it is set on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.).

Order Ref

Enter an order reference as required.

Ext Terms

If this item is to be paid by a series of instalments, enter the relevant extended terms code. These codes are defined in the Cash Management module.

Item entry will pay this item according to the terms used. On updating the item it is possible to amend the payment details within the extended terms code.

Status

Leave blank or enter a valid status code:

Blank - The item will be included in the automatic payment cycle when its due date is reached and the supplier is included.

1 - Select. This indicates that you have selected this item to be paid next time you run a 'payment due' report using selection method 2. (Selection method 2 enables items to be included in the payment run independent of their due date.)

3 - Hold. This will cause this item to be held until subsequently released.

9 - Prompt Pay. This will cause this item to be included in the next automatic payment cycle should the supplier be included, irrespective of the supplier's payment terms.

Dist Code

Optionally enter a distribution code that has been set up from the Accounts Payable Maintenance menu as a standard distribution profile.

When you enter the dissection screen, the GL accounts specified for this distribution code will be entered automatically. Depending on the distribution code, the gross value may have been automatically spread over the accounts.

VAT Calculation

This value decides how VAT is calculated. The available values are:

0 - Both goods and VAT values are entered line by line.

1 - Enter the goods value, and VAT is calculated from it.

2 - The total value of the line is entered in the goods value and the system disaggregates the goods and VAT accordingly.

Cash VAT

Enter 1 if this is a cash-based VAT supplier, and the invoice is tax reclaimable only on payment.

Text

For invoices, credit notes and journals, up to 99 lines of text may be entered at this stage. Only one line is displayed here. The roll key may be used to display or enter further lines if required.

Desc

This field enables you to enter free-format narrative relating to this item.

Currency Conversion Window (F17)

If you wish to override the currency conversion rate or value, press **F17** to display the Override Conversion Parameters window.

F4=Prompt	F8=Update Ledger	F15=Amend item	F22=Desc	
19-19	SF MW KS IM	II EDN400A	PCET02S3	

Fields:

Select

Enter 1 to move a dissection line to the bottom of the screen for amendment.

Enter 2 to see the account levels displayed.

Account

Enter the relevant General Ledger account code for this dissection.

Any extension codes defined to the account code selected will be displayed for review or amendment before the dissection is accepted.

VAT Code

A VAT code is set up in the General Ledger to carry not only a percentage rate but also to specify the General Ledger accounts for VAT postings for sales and purchases.

When posting transactions, the system calculates a VAT rate from the VAT and goods values entered, and compares it to the rate attached to this VAT code. If these are not the same (or are outside the tolerance levels defined in the General Ledger), then an error message is given.

Value

The value entered here depends upon the VAT calculation code on the previous screen.

If the VAT calculation code to be used is 0, then both the value and VAT of the dissection must be entered manually.

If the code is 1 AND the VAT field is zero, then the value must be entered manually and the system will calculate the VAT. The value entered will not be changed by this calculation.

If the code is 2, this means that when you enter the value field, the system will subtract the VAT from the value. The figure in the value field will therefore be reduced by the VAT value.

VAT Value

Enter the VAT value to be associated with the VAT code entered on this line.

VAT can be entered individually against relevant items, or posted as one figure against any one of these items, or posted as a separate figure on its own.

IC

If the General Ledger account is an inter company account, enter the relevant company here.

Quantity

Enter the quantity if required. This field is not mandatory, but the total quantity entered in a batch will be reconciled against the batch quantity total, if one was entered. The quantity will also be part of the transaction posted to the General Ledger.

Cross Period

1 - If the posting is to be split across G/L periods.

Description

Enter a description. This field is not used by the system.

The dissections may be amended as required.

If you enter 2 beside a dissection, the account levels for the individual posting are displayed.

Functions:

F7

Ratios/spread factors toggle.

F12

Update the Ledger with the information you have entered.

F15

Redisplay the header information for viewing or amending.

F20

Toggle between allowing input into the fields at the base of the screen, and allowing input into the fields listed at the top.

F22

Toggle between the General Ledger extension code(s) related to the dissection, and the description.

Press **F8** when you are ready to update. If the credit value matches exactly, a window displays a 'Match with Invoice' field. The value in the field defaults to 1. Press **Enter** on this to match the invoice with the credit. Change the value to 0 if you do not want to match the invoice and credit.

Making a Partial Match

If you press **F8** to update and if the credit value is less than that of the invoice, the partial match window displays.

This window enables you either to part pay the invoice or to create a journal. The credit will always be cleared.

Fields:

Match with Invoice

0 - You can part pay the item, or create an adjustment.

1 - Match with the invoice.

Create Adjustment Item

0 - Part pay the invoice. Press **Enter**, and the payment will be made.

1 - Create an adjustment. Press **Enter**. The invoice will be cleared, and the difference accounted for by creating a journal on the client's account. A field will be displayed, enabling you to enter the contra account for the journal.

Press **Enter** again to update.

Item Transfer

1...
2... **12/APP**

Invoices or other transactions may have been posted to the wrong supplier's account. This procedure enables you to transfer them to the correct supplier.

Only outstanding ledger items not already in a payment cycle may be transferred.

Take the Item Transfer option from the Processing menu. The following fields will be displayed:

Fields:

From Account

Enter the account code from which the transfer is to be made. This can be the same as the 'To account', if you wish to amend the unpaid item.

To Account

Enter the account code to which the transfer is to be made. This can be the same as the 'From Account', if you wish to amend the unpaid item.

Enter the relevant account numbers and press **Enter**, and the screen displayed will be similar to the Item Transfer screen.

Fields:

Document Reference

If unchanged, the reference is retained as the document reference on the 'to' account. The reference on the 'from' account is as defined on the company profile, the cross-reference being the reference transferred to the 'to' account.

If changed, the new reference is used both as the document reference on the 'to' account, and as the cross-reference on the 'from' account.

Document Date

You may change the date of the transferred document.

Target Period

If an item is to be transferred into another period, enter the new period number here in the format YYPP. This must not be a prior period.

Due Date

You may change the due date of the transferred document if the company profile enables the override, otherwise this field is not input capable.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.).

When the details are correct press **Enter**. The screen will display the **F8** key, and you then press **F8** to update.

VAT- Customs Invoice

1...
2...

31/APP

The importing of goods from abroad can involve both shipping agents and the Customs office in the levying of VAT. The result is non-standard VAT invoicing. The customs invoice function is available specifically to enable you to enter a VAT posting directly to the General Ledger VAT subsystem, without posting transactions to Accounts Payable or the General Ledger.

If you import goods from abroad, the invoice from the supplier will not show customs duty or VAT. The value will therefore be recorded in the General Ledger net of VAT, not in the VAT files.

The agent handling the import pays the VAT on the goods on your behalf, and includes this VAT on the invoice sent to you. In addition, the invoice will include the service charge, the VAT on that service, and the value of the VAT that has already been paid on your behalf.

The VAT in this case is recorded in General Ledger, not in the VAT files, as the invoice is not a true VAT invoice, having no VAT document to allow for reclaiming.

The Customs office sends a separate VAT invoice for the VAT. This will be entered in the VAT system only. It is this posting which the Post Customs Invoice facility enables you to make.

Take the VAT - Customs Invoice option from the menu, and enter the relevant supplier. Press **Enter** again to see the selection screen.

F3=Exit	F4=Prompt	F12=Previous	
22-15	SP	MW	KS IM II EDN400A PCET02S3

Fields:

Line No.

Enter here the line number of any detail line you wish to amend. The details will then be displayed on the input line and may be amended.

Code

A VAT code provides the % VAT and the General Ledger accounts for VAT postings for such purchases.

When posting transactions, the system calculates a VAT rate from the VAT and goods values entered, and compares it to the rate attached to this VAT code. If

these are not the same (or are outside the tolerance levels defined in the General Ledger), then an error message is given.

VAT Amount

Enter here the VAT value for the VAT code entered.

Goods Amount

Enter here the goods value relating to the VAT value entered. This will be used to check the VAT rate before posting the VAT, and will also appear on the VAT report.

When you have entered your details as required, press **Enter**. The system will check that the VAT rate of the values entered corresponds to that held by the VAT code.

If it does, the detail line is displayed under the column headers halfway down the screen. If it does not, an error message is displayed, and you can either amend the line or override the warning by pressing **F19**.

When you have finished entering your VAT values and are ready to update, press **F8**.

If your VAT entries add up to the VAT total entered as a header field, the update is made to the VAT files. If the totals do not agree, a window is displayed.

Fields:

Total VAT

The current VAT total is displayed here. You can amend it if you are satisfied that the detail total is correct and should be posted to the VAT files.

Once the above totals are reconciled, press **Enter**. You will be returned to the detail screen. Press **F8** again to update.

Receive Invoices

41/APP

Select the Accounts Payable Application Interface option Receive Invoices to display the Receive Invoices Via EDI screen.

Supplier Invoices, once validated, are received onto the Invoice Log via EDI for subsequent Invoice Matching via the standard Purchase Management option.

The purpose of this function is to receive Supplier Invoices sent via EDI onto the Accounts Payable Invoice log. A control list is printed which can print details of all invoices received or only of those in error.

Note: The invoices must have already been received into the Application Interface database via the 'Receive Documents' function in EDI.

This screen enables you to submit the batch function which adds records to the Accounts Payable Log for Invoices received via EDI.

This performs the following functions:

1. Select

The following details are validated in the document header:

- Supplier code (valid in Accounts Payable)
- Supplier status (not flagged for deletion - postings allowed)
- Invoice number (no duplicates for the suppliers invoice reference)

If any of these conditions are not satisfied, the invoice is ignored and output on the control list.

2. A session control record is created for the first invoice, in Accounts Payable.

3. The following values are accumulated per invoice:

- Line values (excluding discount)
- Discount values
- VAT values (per VAT code)

Then these are compared with the corresponding values on the invoice VAT summary records received. If any of these differ, the invoice is ignored and output on the control list.

4. The invoice is added to the invoice log, and a log dissection record is written per VAT code.

5. If the control list inclusion has been set to 'all', the invoice details are always output to the control list.

06-41	SF	MM	KS IM II KENB20A PET158S1

Fields:

Control List Inclusion

You can enter the following:

- 1 - All. Prints details of all Invoices received.
- 2 - Exceptions Only. Prints only those invoices in error.

Press **F8=Update** to submit the batch function.

Period close

5/AP

When you have completed entering transactions for a financial period you must perform a set of period close procedures before you can start entering transactions for a new period.

Period end dates must be pre-set in the period calendar, otherwise the period close and open routines will not succeed. However, the entered end date is not used to end a period automatically, and you may keep the period open until processing is complete.

The current Accounts Payable period must be closed and the next one opened before you can close the equivalent period of the Cash Management and General Ledger companies to which it is linked.

Restrictions on the use of period end routines

You must wait until users have completed all data entry and left the system.

If the job queue contains no other jobs then a period close is run immediately. While it is queuing or running, users are not permitted by the system to enter any Accounts Payable data.

Note: We advise you to run period close routines at times when users are least likely to be entering Accounts Payable data, for example overnight.

Warning: No other user should attempt an Accounts Payable period close routine for the selected company at the same time.

Note: You must open the next Accounts Payable period before you can close the current General Ledger period to which this module is linked.

Once you have closed a period, you cannot post invoices or cash until the next period is opened. If you close the period prematurely, you may re-open it - provided that you have not already opened the next period.

The procedures required at the end of a period are:

- De-allocate failed sessions. (See the Utilities section)
- Close the period
- Open next period

Note: You may wish to reconcile your Aged Creditors report to your General Ledger before closing the period.

The period close procedure provides a cut-off point for entering transactions to Accounts Payable. This point need not coincide with the period end date in the calendar, but can be any convenient date.

Select the *Period Close* option from the Accounts Payable Initial menu. If the current period is open and session failures have occurred during the period, the batch processing screen displays.

```
L600                                Y6 - Education Company - Y6      User FFV6      4/08/95
                                      16:37:05

Acconts. Payable Period End

Accounts Payable is currently OPEN,   in period 94-11

You may now CLOSE the period by pressing ENTER.

If you do choose to close the period, a batch job will be submitted and a
message will be sent to this terminal on completion of the job.

DO NOT select any further processing options for this ledger until you have
received the message to say that the period has been closed successfully.

F3=Exit
01-02  SF  MW  KS  IM  II  KENB20A  PED170S1
```

Read the information on this screen carefully.

You may decide to close the period by using **F19**, ignoring the messages, but the messages will appear at every period close until action is taken to deal with the failed sessions.

Press **F15** to review the failed sessions. A screen will be displayed.

Select the session you want to review with a 1, and press **Enter** to display the session transactions.

Once the session in error has been reviewed, you should de-allocate it, using a procedure discussed in the Utilities section. When this has been done, take the Period Close option again from the initial menu. This time the message screen should enable you to close the period simply by pressing **Enter**. This will submit a batch job. While this is pending or active, no postings can be made in Accounts Payable.

Opening a Period

If the current period has been closed, then the Period Close option from the menu will display a screen which enables you either to open a new period or to reopen the old one. The latter course may be taken if there are errors in the closed period. Once the new period has been opened, however, the previous period may not be reopened. The new period must be defined on the period calendar in Accounts Payable.

Three-Way Match Options

The Invoice Matching menu options are a quick way of matching invoices to advice note details.

Four menu options enable you to set up the tolerance levels allowed for the match: Match Invoices to Receipts, Enter Invoices, and Amend Existing Invoice Details. You may then automatically match invoices with receipts.

Use invoice matching when

- Purchase orders have been entered and receipts posted.
- Purchase orders have been entered but receipts are missing. In this case receipts will be held on an invoice log for automatic matching. By setting up the company profile field 'GL Postings for Receipts', unmatched invoices can be posted directly to the ledger.
- The company profile field 'Post Unmatched to Ledger' allows an early reclaim of VAT by posting directly to accrual, VAT and creditor General Ledger accounts.

The procedure for using the Invoice Matching menu options is as follows:

- Delimiter Maintenance: Set up values or percentages that the match is allowed to be out and still be accepted (i.e. tolerance levels). Tolerance (or variance) levels may be set up and amended for
 - Individual suppliers
 - Individual purchase orders
 - The company
- Invoice Matching: Enter an invoice, match with order/receipt lines and post either to the ledger or to the log. Or post unmatched invoices (where receipts are missing) to the unmatched invoice log.
- Maintain Unmatched Invoices: This option enables you to access the unmatched invoice log and amend invoice details.
- Batch Invoice Matching: To be used once missing receipts have been added. This option automatically accesses the unmatched invoice log to match invoices with receipts. That is, selects items where the advice note number is the same on both the invoice and the receipt.
- Pay invoices: Use the payment processing options from the Accounts Payable Payments menu to pay matched invoices automatically.

Note: The invoice matching menu items are also known as 'three way match'.

Note: It is recommended when using three way match that the log and ledger flags have the same setting. These are the company profile fields 'Auto Generate Invoice References' and (ensuring that the invoice log is active), 'Auto References'.

Invoice Matching

1/API

This option enables you to run an interactive session of matching invoices (or credit notes) to advice notes. Matching facilities are as follows.

- One to one - an individual invoice to one advice note.
- One to many - one invoice may be matched to many advice notes/receipts.
- A running total displays the values selected.
- Quantities and value totals on receipts may be adjusted for matching purposes although original order totals may not be changed. VAT may be dissected to different tax rates.
- Charges may be added to purchase orders. These additional charges may be dissected to different GL accounts.
- Invoices may be entered and stored for items which have not yet been received. Order lines for the new invoices are taken from purchase orders. The unmatched invoices will later be selected for matching at the Batch Matching option.

Take the Invoice Matching option from the Accounts Payable Invoice Matching menu.

Supplier Item Entry Screen

The screen enables you to enter a batch control value for checking purposes (if your company profile is set up to use batch control).

PM051	Z1 - GB Demonstration Company	USER PRODSUPP	22/07/96 11:25:52
Supplier Item Entry - Session Start -			
Session Number . NEW SESSION			
Document Type . <u>IN</u> IN=Invoice CR=Credit			
Posting Period . <u>9602</u>			
Control Value . .00			
F3=Exit			
value must be greater than 0			

Fields:

Document Type

You may only input one type of transaction per session. Enter one of the transaction types as follows:

IN - Invoices.

CR - Credit notes.

Posting Period

This displays the current Accounts Payable period, but may be changed to a future period if required. The period must exist on the calendar file.

Batch Number

Enter as required.

Control Value

A batch total must be entered, but the value entered here does not restrict the value of documents subsequently entered. At end-of-batch, the value of the documents entered is reconciled. Any discrepancy is highlighted but can be ignored.

Press **Enter** to select the supplier and to maintain supplier text.

Supplier Selection Screen

Fields:

Supplier

Enter a valid supplier account code.

Supplier Text

1 - Display any text held against this supplier. The text is displayed but cannot be amended by this procedure.

Reverse Sign

1 - To reverse the sign and to make a corrective posting to a credit note.

This field displays if you are using the reverse sign function (set up in country-specific parameters).

Functions:

F22

Finish the session.

Press **Enter**. If you entered 1 to see the supplier text, that will now be displayed. Otherwise the Invoice Posting screen is displayed for you to enter invoice details.

Invoice Posting Screen

When you have selected your supplier, press Enter to see the Invoice Posting screen.

Fields:

Our Ref

If a number is displayed it will be an automatically generated invoice number that cannot be changed. This option to auto generates invoice numbers is set up at company profile level.

Otherwise, enter a unique reference for this document. This reference should be recorded on the source document.

Register ?

The supplier's default VAT register will display - only if set up for this supplier in General Ledger. This will enable you to produce your VAT reports based on tax area..

Protocol

If VAT registers are active (as previous field), the protocol numbers are the sequential numbers of invoices to a particular register.

Press F20 to display a window of valid protocol gaps and enter 1 beside a number to select it, otherwise type in the appropriate number directly.

Currency

The default is the supplier currency, but it may be changed - press F17 to overwrite the rate code.

This field is hidden if you are working in single currency.

Period

It defaults to the period entered on the session control screen but may be changed to a later period.

If the accounting date function is active (set up at Country Specific Parameters option 'Accounting Calendar Active?'), then the period will be determined from the document date.

Note: If you are using Italian accounting the tax or registration date will be used.

Tax Date

This is the date associated with this item for VAT purposes. If a date is not entered, the document date will be used to establish the VAT period.

Note: if you are using Italian accounting this field will relate to the registration date.

Doc Date

Enter the date printed on the document (not the date received by your company).

This date is used to calculate the due date for payment.

Supp. Ref

Enter the supplier's invoice number. This field is optional, but if entered, it must be a unique invoice reference for the supplier.

Reason Code

This code is not displayed for invoices.

This code is mandatory for credit notes and provides more detailed analysis of the reasons for such postings. The code must already exist.

Gross

The total value of the item (including any VAT or additional costs).

Convert Point

The field will only display if set up within Country Specific Parameters.

1 - The document date is used to perform currency conversion.

2 - The tax date is used to perform currency conversion.

Tax

Enter the total value of tax.

To dissect the total tax to differing rates of tax, press **F13**.

If you are using acquisition VAT leave this field at 0 value.

Add Costs

Add the total value of any additional charges on the invoice - such as carriage or insurance.

This total may be dissected, to 2 or more ledger accounts, by pressing **F10**.

Discount

1 - Include additional costs in the discount calculation.

0 - Additional costs are excluded from the gross discount calculation. Or, there are no additional costs.

Discount Rate, Code And Value

These fields are completed automatically from the supplier details.

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the **F17** function.

Due Date

Enter the payment due date.

If a date displays, this is calculated from the supplier terms. It may be changed for this transaction if the option to change it is set up on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your country specific parameters must be set up to enable this.).

Order Ref

A three way match may be made by matching

- the invoice number (entered at 'Our Ref' above),
- the purchase order number (entered at this field) and
- the advice note number (entered at the next field).

If the invoice to be matched relates to a single purchase order, enter the order number.

Advice

If you wish a match to be made at this screen, enter the advice note number which relates to the purchase order reference entered at the previous field, or

Leave this option blank and when the screen is completed, press F8 to be prompted to select advice notes to match the purchase order.

Extended Terms

If displayed, will default from the supplier record.

Status

Select the payment status of the invoice:

- 1 - Select. Allow this invoice to be selected when a payment run is made.
- 3 - Hold (from being automatically included in a payment run).
- 9 - Prompt pay. Include in the next payment run irrespective of the payment due date.

VAT Calc

A displayed VAT calculation may default from the Country Specific Parameters. One of the following codes may be displayed or entered:

- 0 - VAT will not be calculated. Goods and VAT are to be entered separately.
- 1 - VAT is calculated and entered based on the value of goods entered.

2 - If you wish to enter only the gross value. VAT will be calculated and entered from the gross.

Cash VAT

The cash basis code will display from the supplier record.

0 - VAT is to be reclaimed based on the invoice date.

1 - VAT will be reclaimed, but based on the payment date.

Text

One or more lines of text of invoice/credit note details can be entered.. After the first line use the roll keys to enter further lines.

Description

One or more lines of description of the transaction can be entered. After the first line use the roll keys to enter further lines.

Functions:

F8

Accept the header screen details. Update the session with or without a discrepancy. When you press F8, matched invoices are posted to the ledger.

If either the 'Order Ref' or 'Advice' fields are left blank the detail screen will display for further matching.

If matching is completed you will be returned to the supplier screen/invoice entry screen.

F10

Split the additional costs to different ledger accounts. A dissection screen will display. The total must equal the total additional costs.

F13

To display the tax dissection screen to split the payable VAT to different tax accounts.

F17

You may select a different currency rate, an explicit rate or a base currency value. This option is available if you are using a multi-currency supplier.

F20

Use this option to select gaps in the protocol sequence. This option is available if you have set VAT register to active.

F22

To end the session and display the session completion screen.

Select VAT Code Window

The VAT dissection window enables you to split the VAT to two or more rates of payable tax. The sum of values you enter at this window must equal the tax total entered on the Invoice Posting screen. However, the tax total may be at zero value if you selected Acquisition VAT at the supplier screen.

When you select **F13** to dissect the VAT value entered at the 'Tax' field the Select VAT Code window will display your current VAT codes.

Fields:

Goods Value

Depends on the 'VAT Calc' basis on the Invoice Posting screen.

You may enter the cost of goods only, or the gross cost of the goods and VAT.

VAT Value

You may enter the VAT or it will be automatically calculated and entered for you. It depends on your entry at the 'VAT calc' item.

Press **F8** to accept the tax dissection and to be returned to the Invoice Posting screen.

Additional Charges Screen

If you have entered additional charges and wish to post the additional charges to more than one ledger account, press **F10=Add Costs** to display the Additional Charges screen.

Cost Description

Enter the description of the additional cost.

G/L Account

Enter a valid General Ledger account code.

Value

The amount of the additional cost to be posted to the GL account.

Press **Enter** when the value of each dissected cost is entered. When the total equals the total additional cost entered on the invoice matching screen, press **F8** to accept the details.

Invoice Posting Screen 2

Press **F8** to select advice notes to match to the invoice or credit note.

Matching invoice or credit note depends on:

- The advice note number on the Invoice Matching screen being left blank and/or
- The purchase order number on the Invoice Matching screen being left blank.

Note: If the order number was also left blank unmatched orders will display for matching.

Fields:

Sel

- 1 - The matched value will be changed to equal the advice note value.
- 2 - List details of all receipts associated with the advice notes.
- 9 - Cancel a line which was previously selected for matching. This option will undo any changes made.

Functions:

F10

Use this option if you have an invoice with no matching receipt note . The 'Order ref' and the 'Advice' note fields must be blank.

Add to Unmatched Invoice Log (F10)

You can now post unmatched invoices that will be selected later for matching at the Invoice Batch Matching option. When you have pressed **F10** a screen will display to prompt for the following:

Fields:

Select

2 - Select order lines for the invoice.

Purchase Order No

Enter the order number from which lines are to be copied to the invoice in anticipation of a future receipt.

Advice Note No

Add the advice note number that will be used to match to the receipt.

Press **Enter** to display the Purchase Order Details screen.

Functions:

F10

To be returned to the Unmatched Invoice Log screen to enter another purchase order number to select lines for inclusion in the invoice.

Press **F8** to accept the invoice details and to post to the unmatched invoice log.

Invoice Entry Screen 3

This screen enables you to select individual receipts to be matched against the invoice. You may also add unmatched invoice details to the unmatched invoice log.

Enter 2 against an order on the 'Advice Note Selection' screen. Receipts associated with the selected advice note(s) will be displayed.

F10=Add selected item to Unmatched Ledger			
10-03	SF	MW	KS IM II KENB20A PET16SS2

Sel

1 - To match the selected receipt. When you have selected all receipts to match press **F8** to update and return to the Advice Note Selection screen.

2 - To maintain the receipt. The Item Price window will display and the total matched receipts will display at the top right of the screen.

5 - If the invoice is for part of the advice note. The split receipt window will be displayed to enable you to split the quantity on the advice note.

Functions:

F10

If an item in the invoice is not included on the selected receipt, then this function will return you to the Invoice Matching screen.

F15

Select all of the receipts displayed to be matched against the invoice.

Split Receipt Window (Option 5)

When the invoice covers only part of the receipt, the Item to be Split window enables you to select some of the quantity to be matched against the invoice.

To display the Split Receipt window enter 5 against a receipt on the previous screen.

Fields:

1st Qty

Will display the total quantity of the receipt. Overwrite with a new value.

2nd Qty

Enter the remaining number to make up to the total line number.

Press **F8** to update the changes. Two receipts lines will display to be selected for matching.

Item Price Calculation Window

Use this window to change either the invoice quantity or the line value of the selected receipt. The new line value will be considered for invoice matching. For changes made, a variance will be held against the receipt, but the actual receipt quantity and inventory quantity will not be changed.

18-40	SF	MW	KS IM II KENB20A PET16SS2

Fields:

Item Price/Order Price

Displays the purchase item price and order price - for reference only.

Invoice Qty

Change the quantity from the receipt as required. Any variations from the original must be within the variance tolerance levels set up at the Delimiter Maintenance option.

Line Value

Amend line value within the limits described for 'Invoice Qty' above.

When you have selected all advice notes and associated receipts and ensured that the required changes have been made, press **F8** to update the changes and perform the match.

If the match cannot be made because the variance is outside of the tolerance limits, then continue to select, change or deselect receipts until any variance is acceptable. When the match is successful you will be returned to the Invoice Entry screen to enter a new invoice.

Note: Any variances allowed will be added to variance records but the original receipt quantity and value will be change.

Functions:

F22

When all required invoices are successfully matched use this option to end the session.

Unmatched Invoice Maintenance

1...
2... **2/API**

Use this option to make changes to invoices that have not yet been matched. You may make changes to line quantities, price, additional charges, tax dissections and GL accounts.

You cannot, however, change the original invoice total.

Select the Unmatched Invoice Maintenance option from the Invoice Matching menu.

PM042	Z1 - GB Demonstration Company	USER PRODSUPP	30/07/96 11:42:14

F3=Exit F4=Prompt			
05-28	SF	MW	KS IM II KENB20A PET16SS2

Fields:

Supplier

Enter the supplier code of the item to be changed.

Log Reference

Enter the invoice reference number from 'Our Ref' field on the invoice header screen.

For Italian accounting, where unmatched invoices were posted directly to the ledger, you may enter an invoice reference.

Press **Enter** to display the order detail lines associated with the invoice.

Unmatched Detail Maintenance Screen

This screen displays invoice line details for you to select for amendment. You may edit line quantities, line price, additional charges and tax dissections; General Ledger accounts may be changed but the original invoice total must not change.

The amended order line will be used to match the invoice.

Fields:

Sel

- 1 - Amend the line.
- 4 - Delete an incorrect line.

Functions:

F10

To add or make changes to additional costs on the order.

F13

To split payable VAT this option will display the tax dissection screen.

This function is not available if you are using the Italian option to post unmatched invoices to the ledger.

Invoice Batch Matching

3/API

This option automatically matches invoices and receipts. It will only select invoices that you have posted to the unmatched invoice log (or to the ledger) through Invoice Matching.

This batch job looks for the advice note numbers on unmatched invoices to match with the same advice note number on receipts. Any matching invoices and receipts found are then checked further for a match of quantities and values. If the match is within the tolerance limits allowed, the matched items are automatically selected and reported as follows:

- Matches made
- Invoices remaining unmatched
- Details of unmatched invoices and any related receipts found.

Take Invoice Batch Matching from the Invoice Matching menu. A message asks you to press **F8** to start the batch matching. When processing is over, a report is produced.

Delimiter Maintenance

1...
2...

4/API

At this option set up tolerance levels for invoice matching. If you do not set up tolerances then receipts and invoices must match exactly.

Select the Accounts Payable 3-way match option
Delimiter Maintenance

Selection Screen

The first selection screen shows the following fields:

Fields:

Supplier

To enter tolerance levels for a particular supplier, enter that supplier here.

Purchase Order

To enter tolerance levels for a particular order, enter that order here.

Line Number

To enter tolerance levels for a particular line, enter that line here.

Leave all fields blank to enter tolerance levels for the current company.

Press **Enter** to see the Invoice Matching Delimiters screen.

Invoice Matching Delimiters Screen

When you have completed the selection screen, press **Enter** to see the Invoice Matching Delimiters screen.

Invoice Matching Delimiters			
Quantity Variance %....From 10- To 10			
Price variance %.....From 7- To 7			
Price Variance Value...From 60- To 60			
Days Past Expected Date..... 30			
Days Past Received Date For Invoice.. 30			
Days Past Invoice Date For Receiver.. 0			
F3=Exit F12=Return F8=Update 16-48 SF MW KS IM II KENB20A PET16SS2			

Fields:

Quantity Variance %

Enter a range of percentage differences to be allowed between the invoice quantity and the receipt quantity.

Example: From 20.00- to 20.00 (to enable a variance from -20% to 20%).

Price Variance %

Enter a range of price differences allowed between the invoice price and the purchase order price.

If you enter 'From' a minus value then the invoice price may be less than the receipt price by that value.

Price Variance Value

Enter a range of amounts by which the invoice price and the purchase order price may differ and still be accepted as a match. Use whole numbers only.

Note that in the ranges entered minus values are allowed.

For an invoice to be accepted as matched, the variance between the invoice and purchase order price must be within both the price variance % and the price value ranges.

Days Past Expected Date

Enter the number of days you allow after the date the goods should have been received. If that number is exceeded matching will be inhibited.

Days Past Received Date For Invoice

Enter the number of days you allow the invoice date to be past the receipt date. If that number is exceeded then matching will be inhibited.

Leave blank for no further check.

Days Past Invoice Date For Receiver

Enter the number of days you allow the receipt date to be past the invoice date. If that number is exceeded, then matching will be inhibited.

Leave blank for no further check.

Press **F8** to save the details.
