Chapter 5 Reports

Reports Introduction

This section describes the reports which are available to assist in the management of Accounts Payable. All appear on the Accounts Payable Enquiries and Reports menu. The reports fall into three categories:

Credit control reports

Overdue Analysis

Lists items which are overdue for payment.

Aged Creditors

Prints the age of outstanding debts based on the item posting period.

Outstanding Items

Lists open items for all suppliers, either for all transaction types, or for a single transaction type.

Supplier Items

Lists open items or all items for a specific supplier, with totals by period.

Cash Flow Analysis

Provides a summary or detailed analysis of the cash requirement needed to meet outstanding debts, based on the payment terms set up against each supplier account.

Log reports

Log Report By Supplier

Prints all transactions on the invoice log, either for all suppliers or for a specific supplier.

Log Report By General Ledger Account

Lists log transactions in General Ledger account sequence for accrual purposes. Values may be printed in transaction or in base currency.

Log Report By Location

Lists log items in location code sequence. This report can be used to trace an item's progress through the authorisation process.

Items Matched By Purchasing

This report is available only if the Purchase Management application is installed. It enables log items to be reported in terms of their progress in the matching process - unmatched, partially matched, or completely matched.

Administration reports

Session Audit

Prints details of transactions posted, by selected session, in detailed or summary format.

Supplier Revenue

Produces a report showing supplier turnover for selected accounts.

Negative Balances By Supplier

This report contains details of all suppliers with negative balances.

Inactive Suppliers

Prints names and addresses of suppliers which have been inactive since a specified date. Inactivity is defined as the absence of transactions posted to the supplier.

Labels By Supplier

Prints mailing labels for suppliers.

Creditor Balances

This report prints supplier balances in credit. This can be run as a summary report with balances only, or as a detailed report, including transactions.

Supplier Item Audit

Lists items for a chosen supplier.

Vendor Payment Analysis

Reports on Accounts Payable and Cash Management payments by General Ledger distribution code or supplier code.

Note: If you are working in a multi-currency environment, several of the reports include currency selection criteria which are not visible in a base currency ledger.

For a multi-currency ledger, the selection criteria of the report screens often ask which currencies to print. Where this occurs you may select one or more of the following values:

Prime

The value in the currency in which it was entered.

Base

The equivalent value in base currency at the time the transaction was posted.

Revalued Base

The equivalent value in base currency when last revalued (available only where the company profile allows revaluation).

Groups

Some of these reports can be sequenced by different groups. Below is a reminder of the significance of the different groups, and where they are set up:

Group Type and Group Company

If you wish to set up a number of companies which are all to be maintained in a similar way, the Group Company Maintenance option on the General Ledger Audit menu enables you to do this. You could set up companies C1, C2 and C3, for example, under the group reference G1, and from then on maintain G1. Any changes will be applied to the member companies.

When you set up a group company such as G1, you must assign a group type. The types currently available are:

- 1 - Mass maintenance and creation.
- 2 - Mass creation.
- 3 - Mass maintenance.

When you come to run your report, you can use the group as a selection and sequencing criterion. These fields are not displayed if the company you are in is not set up for group companies.

Supplier Groups

You can group your suppliers in up to four groups. These groups are set up using the Parameters option from the General Ledger Audit menu, and a supplier is assigned to a group (or groups) in supplier maintenance.

Overdue Analysis and Aged Credit Reports

Two similar control reporting options produce different information:

- Overdue Analysis Control Report
- Aged Credit Control Report

Overdue Analysis Control Report

11/APE

This report lists, by supplier, items which are overdue for payment.

Select the Overdue Analysis option from the Enquiries and Reports menu, and the Overdue Payments screen will be displayed.

F3=Exit F4=Prompt F8=Submit Report F10=Report & Save
F14=Edit rules F18=Currency

05-31 MW IM II KENB20A PED170S1

Fields:

User Code

Enter here your user code (a prompt is available). Press Enter, and any previous saved report parameters you have used will be automatically entered, and may be reused or maintained.

Group Type

If entered, this must be in the range 1-6.

Group

You can choose to run the report over a group instead of the company. Enter a valid group. The current company must exist within the group.

Seq 1-6

These sequencing fields enable you to structure your report.

- 1 - For the report to list account codes within supplier group 3.
- 2 - For account code sequence.

Subtotal

1 - Against any sequence field for which a subtotal is required in addition to supplier and currency.

Account Code Range

Enter the range of accounts for this report.

Alpha Sequence Range

To select the report by the alpha sequence codes which are entered in supplier maintenance, enter the alpha sequence range here.

Supplier Groups 1 - 4

For each supplier group, 1 - 4, you can enter a range as required.

Start Period/Overdue Date

Overdue Payments Report

Enter the due date from which to calculate the number of days overdue for items. This defaults to the current date.

Co/Balances/Items

Enter the appropriate code:

1 - Summary totals will be printed for each code within the parameters selected for sequencing. Individual supplier balances will not be printed. The totals will be in base, and, if selected, in revalued base.

2 - Supplier balances will be printed.

3 - Items will be printed.

If, when you have made your selection, you press **F10** to produce the report and save the definition, the system requires a user code for the save. If you have not entered a user code, or the one you have entered is not yet defined to the system, the User Code window will be displayed:

User Code Window

 This window is displayed if a user code is not entered or has not been defined.

12-41	SF	MW	KS	IM	II KENB20A PED170S1

Fields:

Include Log Items

0 - If log items are not to be included in this report.

1 - If log items are to be included.

Include Negatives

Enter 0 to omit negatives, 1 to include negatives, and 2 to select only negatives. If balances are selected then this flag will apply to balances, otherwise it applies to the transaction value.

Double Space

Enter 0 for single spacing, 1 for double spacing.

New Page

1 - To start a new page after printing user defined subtotals.

Include Zero Accounts

1 - To include zero balance accounts when balances are requested.

Minimum Balance

If a value is entered here, then only accounts with an outstanding balance greater than or equal to this will be eligible for selection. If this is left at zero, balances are not taken into account. If a currency is selected then this value will apply to that currency. Otherwise, it will apply to the base.

Minimum Age (Days)

If a value is entered here, then all items with a number of days overdue which is less than this will be omitted from the report.

Overdue Periods

These fields default to the ageing periods from the company profile, but may be amended. At least one field must be completed.

Supplier Text

Enter 1 to print supplier text on the report.

If you wish to specify the currency of the report, then press **F18** to see the Currency window.

Currency Windows

 This window is displayed if **F18=Currency** is pressed.

07-31 SF MW KS IM II KENB20A PED170S1						

Fields:

Document Date Range

Enter the document date range for selecting transactions. If left blank, all dates will be selected.

Seq 1-6

The sequencing here is second level sequencing within the selections on the first screen.

Up to 6 fields may be selected for sequencing, which means that selected fields will be sequenced within each other. For example, if you want to list transaction type within discount date, enter 1 beside discount date and 2 beside transaction type.

At least one sequence field must be selected, and if value is selected as a selection criterion, no other level should be specified.

Subtotal

1 - Against any sequence field for which a subtotal is required in addition to supplier and currency.

The field must have been selected for sequencing.

Due Date Range

Enter the due date range for selecting transactions. If left blank, all dates will be selected.

Discount Date Range

Enter the discount date range for selecting transactions. If left blank, all dates will be selected.

Transaction Type Range

Enter the transaction type range for selecting transactions. If left blank, all types will be selected.

Document Reference Range

Enter the document reference range for selecting transactions. If left blank, all references will be selected.

Value Range

Enter the value range for selecting transactions. If left blank, all values will be selected.

When you have specified every particular of the report, press **F8** to generate the report, or **F10** to generate the report and save the definition for future use.

Aged Credit Control Report

12/APE

This report shows aged debts based on the item posting period. This report should be run at month end and compared to the session reprint total and the creditors control account in the General Ledger.

Aged Payables Analysis Screen 1

Select a range of suppliers, supplier groups, period and totals for the report.

Select the Accounts Payable control report option Aged Credit. The first Aged Payables Analysis screen will display.

PL407		Y6 - Education Company - Y6		USER FFV6		4/08/95

05-31 SF MW KS IM II KENB20A PED170S1							

Fields:

User Code

Enter your user code to save your report selection to be re-used at a later time. In which case select F10=Report and Save when your selection is completed.

Or, select an existing user code (a prompt is available). Press Enter, and any previous saved report parameters you have used will be automatically entered, and may be re-used or maintained.

Group Type

If entered, this must be in the range 1-6.

Group

You can choose to run the report over a group instead of the company. Enter a valid group. The current company must exist within the group.

Seq 1-6

These sequencing fields enable you to structure the sequence of your report.

For example, to list account codes within supplier group 3 you would enter as:

Supplier Group 3	sequence 1
Account Code	sequence 2

Sub Total

1 - Select to sub-total accounts by alpha sequence, or groups. Suppliers and currency are already sub-totalled.

You may only subtotal fields which have been selected for sequencing.

Account Code Range

Select a range of accounts for this report.

Alpha Sequence Range

To select the report by the alpha sequence enter a range of supplier alpha sequence codes.

*Note: Alpha sequence codes are entered in
Supplier Maintenance*

Supplier Groups 1 - 4

For each supplier group, 1 - 4, you can enter a range as required.

Start Period/Overdue Date

Enter the period at which the report is to start. This defaults to the current period.

Co/Balances/Items

Select the report type:

1 - Co. Summary totals will be printed for each code within the parameters selected for sequencing. Individual supplier balances will not be printed. The totals will be in base, and, if selected, in revalued base.

2 - Balances. Supplier balances will be printed.

3 - Items. The report will include Item details.

If, when you have made your selection, you press **F10** to produce the report and save the definition, the system requires a user code for the save. If you have not entered a user code, or the one you have entered is not yet defined to the system, the User Code Entry window will be displayed.

User Code Entry Window (F10)

If, when you have made your selection, you press **F10** to produce the report and save the definition, the system requires a user code for the save. If you have not entered a user code, or the one you have entered is not yet defined to the system, the User Code Entry window will be displayed.

Outstanding Items and Supplier Items Reports

Two similar control reports are available to produce different reports as follows:

- Outstanding Items (Control Reports)
- Supplier Items (Control Reports)

Outstanding Items Control Report

13/APE

This report provides a list of all outstanding items against each supplier. It is run either for all item types, or a separate report may be requested for each item type.

Select the Outstanding Items option from the menu and the Outstanding Items screen will be displayed.

PL491	Y6 - Education Company - Y6	User FFV6	4/08/95 16:12:48
Outstanding Items Report			
Enter Item Type		☐	(Blank for all transaction types)
Currencies to print:	Prime?	1	0/1
	Base?	0	0/1
Held items only		0	0/1
F3=Exit with no print			
07-49	SF	MW	KS IM II KENB20A PED170S1

Fields:

Item Type

Enter the item type of the items that are to be included in the report. If all items are to be included leave this entry blank. Valid types are as follows:-

IN - Invoice

CR - Credit note

JL - Nominal journal

CA - Cash on account

FJ - Prime currency journal

PX - Cancelled payment

PY - Payment

Currencies To Print

For multi-currency Accounts Payable, currency selection criteria must often be defined. (For a single currency ledger, these are not displayed). Enter 1 by the currency you wish to see printed:

Prime - The value in the currency in which it was entered as a transaction.

Base - The equivalent value in base currency at the time the transaction was posted.

Revalued base - The equivalent value in base currency when last revalued (available only where the company profile allows revaluation).

You can select more than one currency.

Held Items Only

Enter 1 to print held items only.

Press **Enter** to submit a job to produce the report.

Supplier Items Control Report

14/APE

This report provides a list of all items or open items for a chosen supplier.

Select the Supplier Items option from the menu and a screen will be displayed. Enter your selected values, then press **Enter** to print the report.

Fields:

Account Code

Enter the supplier account code. Use the search facility if you do not know the supplier code.

Items Required

0 - Open(Unpaid) items only.

1 - All items, paid or unpaid.

Currencies To Print

For a multi-currency Accounts Payable application currency selection criteria must often be defined. (For a single currency ledger, these are not displayed). Enter a 1 by the currency you wish to see printed:

Prime - The value in the currency in which it was entered as a transaction.

Base - The equivalent value in base currency at the time the transaction was posted.

Revalued base - The equivalent value in base currency when last revalued (available only where the company profile allows revaluation).

Not all of the above are necessarily available, but you can select as many as you like of those that are available as selection options.

Press **Enter** to submit a job to produce the report.

Cash Flow Analysis Control Report

15/APE

This report shows projected cash outflows for the company for individual days, up to the 30 days level, and as totals for the ranges 30 - 60 days, 60 - 90 days, and beyond.

Select the Cash Flow Analysis option from the menu, and a screen will be displayed. Enter your selected values, then press **Enter** to produce a report.

Fields:

Account Code Seq.

To produce a report in ascending account number sequence, enter a 1 in this entry field.

Account Code Range Select

To allow the selection of a range of accounts for which the report is to be produced, enter a 1 in this field.

Supplier Groups 1 - 4

To sequence the report by the contents of a supplier group code, enter 1 in the appropriate field.

Alpha Sequence Select

To sequence the report by the contents of the supplier alpha search entry, enter a 1 in this field.

Report Start Date

The start point for the report. It defaults to today's date but may be changed.

Summary Or Detail Select.

0 - The summary report prints a single page analysed into 30 one-day totals followed by groupings of 30 days to 90 days ageing.

1 - The details report prints a one line total for each supplier followed by the summary page for the whole ledger.

Include Log Items

Enter 1 to include log items in the report.

Prime Currency

If a currency code is entered, only transactions in that currency will be included in the report. (If the base currency is entered, the report will include only base currency transactions.)

If left blank, the base equivalent of all transactions of all currencies will be included.

Revalued Base

If the currency code is blank, enter :

0 - Print values at the originally posted exchange rate.

1 - Print revalued base values.

If you decide to select a range of account codes, a selection screen will be displayed when you press **Enter**. Select the range as required, then press **Enter** to submit a job to produce the report.

Supplier Log Report

31/APE

This report lists all log items recorded against an individual supplier or all suppliers.

Select the Supplier option from the Log Reports section of the menu. A screen will be displayed. Enter your selected values and press **Enter** to produce the report.

Fields:

Account Code

Enter the supplier account code. Use the search facility if you do not know the supplier code.

Currencies To Print

For a multi-currency Accounts Payable application currency selection criteria must often be defined. (For a single currency ledger, these are not displayed). Enter a 1 by the currency you wish to see printed:

Prime - The value in the currency in which it was entered as a transaction.

Base - The equivalent value in base currency at the time the transaction was posted.

Revalued base - The equivalent value in base currency when last revalued (available only where the company profile allows revaluation).

Not all of the above are necessarily available, but you can select as many as you like of those that are available as selection options.

Press **Enter** to submit a job to produce the report.

Log Items by General Ledger Account Report

This report lists log transactions in General Ledger account sequence. Values may be printed in prime or base currency. The report is used to establish values on the log against General Ledger accounts, for accrual purposes.

Select the General Ledger Account option from the menu, and a screen will be displayed. Enter your selected options, and press **Enter** to produce the report.

Fields:

Currencies To Print

For a multi-currency Accounts Payable application currency selection criteria must often be defined. (For a single currency ledger, these are not displayed). Enter a 1 by the currency you wish to see printed:

Prime - The value in the currency in which it was entered as a transaction.

Base - The equivalent value in base currency at the time the transaction was posted.

Revalued base - The equivalent value in base currency when last revalued (available only where the company profile allows revaluation).

Not all of the above are necessarily available, but you can select as many as you like of those that are available as selection options.

Cut-Off Date

The report lists log transactions posted up to the cut-off date. It defaults to today's date but may be changed.

Press **Enter** to submit a job to produce the report.

Log Items by Location Report

33/APE

This report lists log items in location code sequence. (The location code is entered as it is registered, and can be used to trace an item's progress through the authorisation process). Values may be printed in prime or base currency.

Select the Location option from the menu, and a screen will be displayed. Enter your selected options, and press **Enter** to produce the report.

Fields:

Currencies To Print

For a multi-currency Accounts Payable application currency selection criteria must often be defined. (For a single currency ledger, these are not displayed). Enter a 1 by the currency you wish to see printed:

Prime - The value in the currency in which it was entered as a transaction.

Base - The equivalent value in base currency at the time the transaction was posted.

Revalued base - The equivalent value in base currency when last revalued (available only where the company profile allows revaluation).

Not all of the above are necessarily available, but you can select as many as you like of those that are available as selection options.

Cut-Off Date

The report lists log transactions posted up to the cut-off date. It defaults to today's date but may be changed.

Press **Enter** to submit a job to produce the report.

Matched by Purchasing Report

34/APE

If your system has the Purchase Management application installed, then this provides you with an invoice matching function. This enables log items to be matched with receipts and orders in the Purchase Management application.

This report enables log items to be reported in terms of their progress in this matching process - i.e. unmatched, partially matched or completely matched.

The report of unmatched items would normally be used as a prompt for log to ledger transfers of the items concerned. Especially just prior to month end.

Select the Matched by Purchasing option from the menu. A screen will be displayed. Enter your selected options and press **Enter** to produce the report.

Fields:

Enter Selection

Enter the code associated with the level of detail required upon the report. The allowable codes and their function are as follows:-

1 - Display log items that have been partially matched by the purchase management application.

2 - Display log items that have been completely matched by Purchasing.

Blank - Display both the above.

Log History Required

Enter 1 to print the log history of each item.

Press **Enter** to submit a job to produce the report.

Session Audit Report

**41/APE**

Warning: It is imperative that this report be run daily and reconciled to the appropriate General Ledger control account. Any discrepancies should be investigated and resolved immediately.

This audit report is the fundamental transaction audit report. It should be printed each day, reconciled to the General Ledger control account, and filed for audit purposes. This enables any errors to be trapped immediately.

The report will provide a hard copy of all items posted for each session number. The information given for each session number includes the following:

- Type of item posted
- Document references.
- Reason code (credit notes and journals only)
- Total value of the transaction and the goods/VAT split
- Discounts allowed and taken
- Relevant posting period

At the end of the report, totals by transaction type are summarised, and the net value posted to the ledger for the range of sessions included in the report.

Select the Session Audit option from the menu, and a screen will be displayed. Enter your selected values and press **Enter** to produce the report.

Fields:

Session Range

To print all sessions not previously printed leave both of these entries blank. To print all sessions up to an entered number leave the 'FROM' entry blank and enter the requested number in the 'TO' entry. To print all sessions from an entered number to the last session used, enter the number in the 'FROM' entry and '9999999' in the 'TO' entry.

Summary Or Detail

Select the level of detail required on the session audit report.

0 - Summary Listing

For each transaction type the total value posted is shown. This option is not available when producing a report of all unprinted sessions.

1 - Detail

Lists every transaction in each session. The summary page is printed at the end of the report.

Press **Enter** to submit a job to produce the report.

Supplier Revenue Report

**42/APE**

This report shows the total invoice and total credit note values for given periods.

Select the Supplier Revenue option from the menu, and a screen will be displayed. Enter your selection values as required, and press **Enter** to produce the report.

Fields:

Account Code Seq.

To produce a report in ascending account code sequence, enter a 1 in this entry field.

Account Range Select

To allow the selection of a range of accounts for which the report is to be produced, enter a 1 in this field.

Supplier Groups 1 - 4

To sequence the report by the contents of a supplier group code, enter 1 in the appropriate field.

Alpha Sequence Select

To sequence the report by the contents of the supplier alpha search entry, enter a 1 in this field.

Start Period Number

The range of periods for which turnover is to be reported.

End Period Number

The range of periods for which turnover is to be reported.

Include Period Details On Report

Enter 1 to print period details making up the turnover value, or leave blank to print only a summary line per supplier/period.

Currencies To Print

For a multi-currency Accounts Payable application currency selection criteria must often be defined. (For a single currency ledger, these are not displayed). Enter a 1 by the currency you wish to see printed:

Prime - The value in the currency in which it was entered as a transaction.

Base - The equivalent value in base currency at the time the transaction was posted.

Revalued base - The equivalent value in base currency when last revalued (available only where the company profile allows revaluation).

Not all of the above are necessarily available, but you can select as many as you like of those that are available as selection options.

If you decide to select a range of account codes, a selection screen will be displayed when you press **Enter**:

Select the supplier range as required, then press **Enter** to submit a job to produce the report.

Negative Balances by Supplier Report

43/APE

This report lists all supplier accounts which are in credit - i.e.: which owe money to the company.

Select the Negative Balances by Supplier option from the menu. No selection screen will be displayed, instead a window will appear asking you to confirm your request by pressing **F8**. If you decide not to run the report then press **F3** or **F12**.

Inactive Suppliers Report

44/APE

This report prints names and addresses of suppliers which have been inactive since a specified date. Inactivity is defined as the absence of transactions posted to this supplier. This report may be used to identify obsolete suppliers to be flagged for deletion prior to a purge.

Select the Inactive Suppliers option from the menu, and a screen will be displayed. Enter your selected values and press **Enter** to produce the report.

Fields:

Last Posting Date

Enter the cut-off date for this report. This date defines the last posting date of a transaction for the supplier's account. If the last posting date is prior to the date entered here the supplier will be classified as being inactive.

Recommend Suppliers For Deletion

Enter 1 here if you wish inactive suppliers to be flagged for deletion on the supplier maintenance file.

Any supplier so flagged will be deleted the next time the archive routine is run, as long as there are no outstanding transactions for that supplier.

Press **Enter** to submit a job to produce the report.

Labels by Supplier

**45/APE**

This option enables you to print labels for suppliers. This is a useful mailing list facility.

Standard labels are printed on continuous stationery, printing three labels across the page, at 10 characters per inch. Label depth is 1.5 inches (38 mm), printing six lines per inch. You need to ensure that you are using labels of the correct specification.

Select the Labels by Supplier option from the menu, and a screen will be displayed. Enter your selected values and press **Enter**. This will produce your report, unless you have asked for a range of suppliers, in which case a new screen will be displayed to allow you to enter the range of suppliers. Press **Enter** when the range has been entered, and the report will be produced.

Fields:

Account Code Seq.

To produce a report in ascending account number sequence, enter a 1 in this entry field.

Account Range

To allow the selection of a range of accounts for which the report is to be produced, enter a 1 in this field.

Supplier Groups 1 - 4

To sequence the report by the contents of a supplier group code, enter 1 in the appropriate field.

Post Code Sequence

To sequence the report by the post code of the suppliers, enter a 1 in this field.

Account Category

Enter a 1 in this field to sequence the report by the contents of the account category field defined for the supplier.

Despatch Addresses

Enter 1 if labels are to be produced for each despatch address for each supplier selected.

If you decide to select a range of account codes, a selection screen will be displayed when you press **Enter**:

Select the range of suppliers for whom labels are to be printed, then press **Enter**. The next screen to be displayed will ask you to enter the number of labels you want to produce for each supplier.

Press **Enter** to submit a job to produce the report.

Creditor Balances Report

46/APE

This option enables you to produce a report of creditor's balances. You can select a range of periods to include, and can choose whether to use control accounts or supplier accounts to produce the figures.

A summary report prints the balances only, while a detailed report prints the transaction values for each account.

The report takes the opening balance for a control account in the GL, adds the AP movements and calculates a closing balance for the GL control account. It then checks and reports on any variances. The print is useful for reconciliation purposes.

Select the Creditor Balances option from the Enquiries and Reports menu. A screen will be displayed. Enter your selected values and press **Enter** to submit the job to produce the report. Press **Enter** again to exit the program.

Fields:

Period Range

Enter the range of periods the report is to represent.

Control Account Range

Enter the range of control accounts over which the report is to run.

Supplier Account Range

Enter the range of supplier accounts over which the report is to run.

Detail Or Summary Report

Enter 1 to produce a report which lists the transaction and values for each account, as well as the balance. Enter 2 to list the balances only.

Both reports will give a warning message if there are General Ledger account discrepancies.

Supplier Item Audit Report

47/APE

This report lists either all items or all open items for a chosen supplier. You may choose whether or not to print payment details.

Select the Supplier Item Audit option from the menu and a screen will be displayed. Enter your selection values and press **Enter** to produce a report.

Fields:

Account Code

Enter the supplier code as required.

Items Required

Enter 1 to print all items, leave 0 to print only open (unpaid) items.

Print Payments Of Items

Enter 1 to print item payment details.

Press **Enter** to submit a job to produce the report.

Vendor Payment Analysis Report

48/APE

This option enables you to print a report of Accounts Payable and Cash Management payments by General Ledger distribution and/or supplier code.

This provides an analysis of how the money was spent, and may be compared with original cash forecasts.

Select the Vendor Payments Analysis option from the Enquiries and Reports menu to see the selection screen. When you have entered your report selections, press **Enter** and the **F8** function key will appear at the bottom of the screen. Press **F8** to generate the report.

Fields:

Include Accounts Payable Transactions

Enter 1 if you want Accounts Payable payments to be included in this analysis.

Distributions to creditor control accounts and memorandum accounts will not be included.

Include Cash Management Transactions

Enter 1 if you want Cash Management payments to be included in this analysis.

Distributions to bank accounts and memorandum accounts will not be included.

Sequence

Enter 1 to sequence the report by General Ledger, 2 to sequence the report by supplier.

Sequence 2 cannot be used if Cash Management payments are to be included in the analysis.

Period Range

Enter the required period range for the report. These fields default to the period before the current one.

Retrospective Open Items

49/APE

This report prints a snapshot of the position, by control account, as at the end of any selected period. All open items are listed, with a total for each account, and a total for all control accounts included.

The report is used for end-of-year auditing purposes.

Select the AP reports option Retrospective Open Items.

Retrospective Open Item Report Screen

Enter your selection for the audit.

Fields:

Period

The report produces the position at the end of the period entered here.

Control Account Range

Enter the range of accounts to be included in the report. Leave blank for all accounts.

Press **Enter** to validate your entries and to submit the job for processing.
