Chapter 6

Partita

AP Italian Function Introduction

The Italian 'partita' function (switched on as a country-specific parameter) enables postings made to be assigned a unique system-generated partita number. This is composed of the year and the item reference.

Then, when you allocate partita items, the relevant partidas are consolidated into the partita with the lowest (normally the earliest) partita number.

Partita Enquiry and Processing

Two options exist for the purpose of processing and enquiry:

- Partita (enquiry)
- Partita (processing)

If you are using the Italian 'partita' function (switched on in Country-Specific Parameters on the General Ledger Utilities menu), your postings are assigned a unique system-generated partita number composed of the year and item reference.

When you allocate partita items, the relevant partitas are consolidated into the partitas with the lowest (normally the earliest) partita reference.

Partitas can be amended and enquired upon from the Partita menu. The header screens will show total debits, credits and total outstanding debits and credits.

To select partitas for the enquiry take the Partita option from the Enquiries section of the Partita menu.

Partita Enquiry

1/APZ

Select partita data for the enquiry.

To select partidas for the enquiry take the Partita option from the Enquiries section of the Partita menu. The Partita Amendment screen displays.

GL675	Z1 - Demonstration Company	USER GBJBAMCB	26/09/96 15:54:20
Partita Amendment			
Partita status . . @ (0=Open, 1=Closed, 2=Both)			
Source account . ? █			
Partita numbers . ? _____ to _____			
F3=Exit F4=Prompt			
07-22	SF	MW	KS IM II EDN400A PET16SS2

Fields:

Partita Status

0 - See all open partidas.

1 - See all closed partidas (i.e. where balances=0, and all items are closed).

2 - See all partidas.

Source Account ?

Enter the supplier whose partidas you wish to see.

Entry is mandatory.

Partita Numbers ?

Enter the range of partita reference numbers you wish to see. The reference numbers must be prefixed by the year.

Leave blank to see all partidas included in the selection.

Partita Processing (Amendment)

12/APZ

This option enables you to change the partita reference of any item for a selected supplier. You can change it to an existing partita reference, and the item will be moved to the entered partita.

You may select two or more partita references to be moved to and grouped under a new or existing partita reference.

If you remove the last - or only - item from a partita, that partita is deleted.

To select partitas for amendment take the Partita option from the Processing section of the menu.

Fields:

Partita Status

0 - See all open partitas.

1 - See all closed partitas (i.e. where balances=0, and all items are closed).

2 - See all partitas.

Source Account

Enter the supplier whose partitas you wish to amend.

Entry is mandatory.

Partita Range

Enter the range of partitas you wish to amend.

Leave blank to select from all items for the supplier.

Press **Enter**.

Partita details are displayed. Select with 1 to bring up a window enabling you to change or create a partita.

Fields:

X (Options)

1 - To move a single item. A window will display for you to enter a new or existing partita reference.

2 - To move, or group, two or more items. Enter 2 at each total line to be moved. A window will display for you to enter a new or existing partita reference for the mass change.

Functions:

F15

Displays the lines in the reverse order of the item reference number.

F16

Displays the lines in the reverse order of the partita reference number.

Item Amendment

11/APZ

This option enables you to amend a ledger item in any way.

Note: This option, while a requirement in some countries, especially Italy, is not enabled in others, and is controlled by the country code of the company profile.

Fields:

Item Type

Enter the item type of the item you wish to amend.

Item Reference

Enter the item reference of the item you wish to amend.

Supplier

Enter the supplier of the item you wish to amend. This field may be left blank.

When you have selected the item to amend, press **Enter** to see the item header details.

Our Reference

If the option to generate references automatically was taken at company profile level, this field is not displayed; a number is allocated. Otherwise, enter a unique reference for this document.

This reference should be recorded on the source document.

Register

If active, the VAT register facility is provided to enable you to produce your VAT reports based on tax area. The codes are set up in General Ledger by the user, and relate to a particular tax office.

Protocol

If VAT registers are active, the protocol numbers are the sequential numbers of invoices to a particular register.

Press F20 to display a window of valid protocol gaps and enter 1 beside a number to select it, otherwise type in the appropriate number directly.

Currency

The default is the supplier currency, but it may be changed.

This field is hidden if you are working in a single currency.

Period

For transfers and direct posting, this is the period to which this item will be posted. It defaults to the current Accounts Payable period but may be changed to a later period (not an earlier one) if the due date has been amended for a recalculation.

Tax Date

This is the date associated with this item for VAT purposes. If this is not entered, the document date will be used to establish the VAT period.

Document Date

Enter here the date printed on the document, not the date on which it was received by your company.

This date is used to calculate the due date for payment.

Reason Code

This code is not displayed for invoices.

This code is mandatory for credit notes and journals and provides more detailed analysis of the reasons for such postings. The code must have been set up on the Reason Codes file.

Supplier Reference

This is the reference the supplier has attached to the item. This field is optional, but if entered it must be a unique reference within this supplier, ensuring that an invoice is entered only once.

Gross

The total value of the item (including VAT).

For journal postings, the value may be positive or negative. A positive value increases the value owing to the supplier (in the same way as an invoice), with debits to the dissection and VAT accounts. A negative value reduces the value owing to the supplier (in the same way as a credit note).

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the F17 function.

Currency Rate

If the currency rate code is not known, a rate specific to this document may be entered. The rate value entered will be used to convert the document gross value into the base currency value for this ledger. Up to five places of decimals may be specified.

Discount Rate

This figure represents the discount rate which is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this rate, and the new rate entered will override that specified for the supplier.

Note that the rate and the value cannot both be used.

Discount Code

A discount code can be defined to hold the percentage discount structure of a particular supplier.

Discount Value

This figure represents the discount value which is to be applied on settlement of this item.

If the option to change discount rates or values for this supplier is set to 1, then you may change this value, and the new value entered will override that specified for the supplier.

Due Date

The payment due date is calculated automatically from the payment terms defined for the supplier, and is based on the document date. It may be changed for this transaction if the option to change it is set on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your Country Specific Parameters must be set up for this in General Ledger.).

Order Ref

Enter an order reference as required.

Ext Terms

If this item is to be paid by a series of instalments, enter the relevant extended terms code. These codes are defined in the Cash Management application.

Item entry will pay this item according to the terms used. On updating the item it is possible to amend the payment details within the extended terms code.

Status

Leave blank or enter a valid status code:

Blank - This will cause the item to be included in the automatic payment cycle when its due date is reached and the supplier is included.

1 - Select. This indicates that you have selected this item to be paid next time you run a 'payment due' report using selection method 2. (Selection method 2 enables items to be included in the payment run independent of their due date.)

3 - Hold. This will cause this item to be held until subsequently released.

9 - Prompt Pay. This will cause this item to be included in the next automatic payment cycle should the supplier be included, irrespective of the supplier's payment terms.

Dist Code

Optionally enter a distribution code which has been set up from the Accounts Payable Maintenance menu as a standard distribution profile.

When you enter the dissection screen, the General Ledger accounts specified for this distribution code will be entered automatically. Depending on the type of distribution code, the gross value may also have been automatically spread over the accounts.

VAT Calculation

The value entered here will dictate how VAT is calculated for the dissection lines. The available values are:

0 - Both goods and VAT values are entered line by line.

1 - Enter the goods value, and VAT is calculated from it.

2 - The total value of the line is entered in the goods value and the system disaggregates the goods and VAT accordingly.

Cash VAT

Enter 1 if this is a cash-based VAT supplier, and the invoice is tax reclaimable only on payment.

Text

For invoices, credit notes and journals, up to 99 lines of text may be entered at this stage. Only one line is displayed here. The roll key may be used to display or enter further lines if required.

Desc

This field enables you to enter free-format narrative relating to this item.

The item header can be amended via any input fields.

Currency Conversion Screen (F17)

If you wish to amend the currency conversion rate or value, press **F17** to display a window.

To override the current rate you may:

- Enter a predefined rate code
- Enter a rate by which the value is to be multiplied or divided
- Enter the target value. The rate will be calculated by the system

On pressing **Enter**, you will see the rate applied to the converted currencies.

Press **Enter** again to proceed to the next screen.

Fields:

Select

Enter 1 to move a dissection line to the bottom of the screen for amendment.

Enter 2 to see the account levels displayed.

Account

Enter the relevant General Ledger account code for this dissection.

Any extension codes defined to the account code selected will be displayed for review or amendment before the dissection is accepted.

VAT Code

A VAT code is set up in the General Ledger to carry not only a percentage rate but also to specify the General Ledger accounts for VAT postings for sales and purchases.

When posting transactions, the system calculates a VAT rate from the VAT and goods values entered, and compares it to the rate attached to this VAT code. If these are not the same (or are outside the tolerance levels defined in the General Ledger), then an error message is given.

Value

The value entered here depends upon the VAT calculation code on the previous screen.

If the VAT calculation code to be used is 0, then both the value and VAT of the dissection must be entered manually.

If the code is 1 AND the VAT field is zero, then the value must be entered manually and the system will calculate the VAT. The value entered will not be changed by this calculation.

If the code is 2, this means that when you enter the value field, the system will subtract the VAT from the value. The figure in the value field will therefore be reduced by the VAT value.

VAT Value

Enter the VAT value to be associated with the VAT code entered on this line.

VAT can be entered individually against relevant items, or posted as one figure against any one of these items, or posted as a separate figure on its own.

Ic

If the General Ledger account is an inter company account, enter the relevant company here.

Quantity

Enter the quantity if required. This field is not mandatory, but the total quantity entered in a batch will be reconciled against the batch quantity total, if one was entered. The quantity will also be part of the transaction posted to the General Ledger.

Cross Period

Enter 1 if the posting is to be split across GL periods.

Description

Enter a description. This field is not used by the system.

Functions:

F8

Update the Ledger with the information you have entered.

F11

Cancel the item being entered (not the entire session).

F15

Redisplay the header information for viewing or amending.

F20

Toggle between allowing input into the fields at the base of the screen, and allowing input into the fields listed at the top.

F22

Toggle between the General Ledger extension code(s) related to the dissection, and the description.

The dissections may be amended as required.

If you enter 2 beside a dissection, a window of account level details is displayed.

Partita Verification and Rebuild

21/APZ

This option is used only when processing errors are suspected.

It will rebuild partita balances and transactions and check that partita details match posted items and transactions.

You will have the option to verify balances, structures and items and to correct balances.

To run this option, select the Partita Verification & Rebuild option from the Utilities section of the Partita menu.

When you have selected the update press **Enter**. Press **F8** to submit the procedure and be returned to the Partita menu.

A report will be produced for each validation selected.
