Chapter 2

Processing

Accounts Receivable Processing Options

Post transactions directly to the customer's account by selecting the Accounts Receivable processing options.

This section deals with all the processing options except the cash allocation options. These are explained in another section.

Understanding Session Control

The terms batch and session both identify a single group of transactions posted to the application. The important differences between them must be understood, and are explained here.

When you enter an Accounts Receivable option to post an item (i.e. an invoice, a credit note or a journal), a system session is started with an automatically generated session number. This number is recorded with every transaction entry until you complete the transaction entry procedure. The session numbers are held on every transaction record for use in session audit reports and for enquiries.

If you cancel or interrupt a session, the session number remains assigned, but is identified as a cancelled or incomplete session.

Note: Session control is an important feature in item reports and enquiries, in archiving data, and in audit trails, and is therefore controlled by the system. It is not an optional feature.

Understanding Batch Control

In contrast to session control, the batch control function is optional. Batch control fields only display if the Accounts Receivable company profile is set up to run batch control.

If you are using batch control then a batch number and a control total are entered at the first screen for each new session.

The batch number enables you to group together a set of transactions. The batch number is recorded with each transaction entered.

For the batch control total is for checking purposes. You add together the totals of the items to be posted in the batch. Enter the control total before posting. At batch completion the system then matches the actual total of all transactions entered against your batch control total. Any discrepancy between the two totals is highlighted - you are allowed to complete, with a discrepancy, if required.

Note: The batch control total is always entered as a hash total, particularly when transactions of various currencies are entered. For example, if you are entering one invoice for 100 pounds sterling and another for 100 French francs, then the hash total is 200.

A batch, unlike a session, can be re-entered after it has been left, for the amending of entries or the addition of more items.

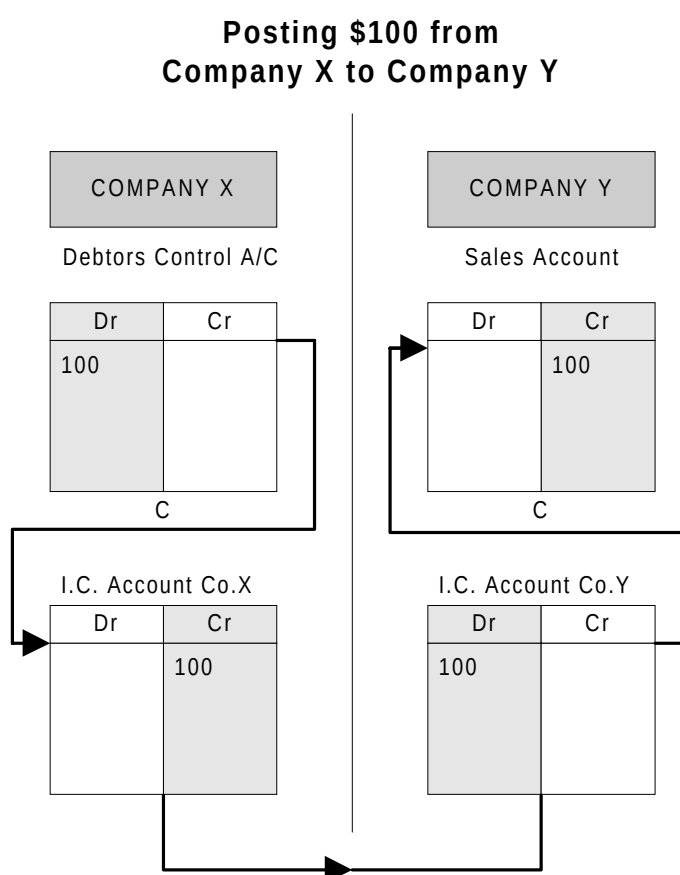

Inter-company Accounting

Any two Accounts Receivable companies sharing the same system and environment can be set up to use the inter-company accounting facility. This facility allows you to post invoices and credit notes between companies using different General Ledger companies. The chart of accounts for each company which uses this facility must include inter-company control accounts.

Note: Refer to General Ledger for more details of setting up inter-company control accounts.

The figure below illustrates how inter-company posting is performed between two companies:

If you select the inter-company posting option to post transactions between companies, then the system includes an additional field in the General Ledger item analysis screen which allows you to select a target company for posting. If you then prompt on the account number field, the prompt window displays all the available account numbers for the selected company. When you have completed a batch that includes inter-company transactions, the postings are made automatically.

Reverse Sign Postings

This function is controlled by a country-specific parameter in the General Ledger Utilities. If activated, you can make corrective postings by posting positive values to the credit side and negative values to the debit side.

It is available for CR (credit) and JL (journal) postings only.

VAT Accounting

The following rules apply to the posting of VAT values to the General Ledger, where invoices and credit notes are posted together with VAT values (there is no VAT on adjustment journals):

- If the VAT is due on a cash receipt basis, the VAT value will be posted to the suspense account on the relevant VAT record.
- If the VAT is due on an invoice basis, and unless extra charges apply, the VAT value will be posted to the VAT sales account on the relevant VAT record.
- If extra charges apply, two VAT values will be posted to the accounts specified on the relevant VAT code record - the basic value account, and the extra charges account. (The goods value is posted only once).
- The VAT details are also written to a VAT analysis field for use in VAT reports and enquiries. If operating VAT registers, you are provided with the facility to access protocol gaps when you enter invoices or credit notes.

Refer to General Ledger for more information on VAT rates, codes and registers.

VAT Calculation Methods

The system provides you with the following three methods of entering invoices or credit notes with VAT: These are set in the Default VAT Calculation Method (AR) field in the Country Specific Parameters from General Ledger Utilities options.

- 0 You enter all the posting details by hand; the system validates your entries.
- 1 You enter the net value of the invoice or credit note, and the system calculates the gross value and the VAT value, based on either a default rate or an entered rate. This is probably the most commonly used of the three methods.
- 2 You enter the gross value of the invoice or credit note, and the system calculates the net value and the VAT value, based on either a default rate or an entered rate. This method is widely used in Italy.

These methods are defined by the VAT calculation codes 0, 1 and 2 respectively.

Partita

If you are using the Italian partita function, then postings are assigned a unique system-generated partita number composed of the year and item reference.

Note: Partita is switched on in the GL utility option Country-Specific Parameters.

When you allocate partita items, the relevant partidas are consolidated into the partidas with the lowest (normally the earliest) partita reference.

Note: Partitas can be amended and enquired upon from the Accounts Receivable Italian options. (/ARZ).

Invoices, Credit Notes

1/ARP

This section describes how to enter invoices and credit notes and post them to your ledger, both in base and prime currency. The procedure for entering both invoices and credit notes is the same. When you start an entry session you must identify which type of transaction you are about to enter, as invoices and credit notes cannot be entered together.

Note: This facility does not print invoices or credit notes. Use the invoicing option in Sales Order Processing.

Invoice/Credit Memo Postings Batch Screen

Select the sales ledger processing option
Invoices, Credit Notes.

The batch screen displays to enable you to enter the batch control value and quantity.

Note: Batch number and totals are only available if you decided to use batch control (in the company profile).

Select an posting analysis method and make an intercompany posting if required.

SL180	EI - Demonstration Company	User ED3	15/03/94 15:24:06
Invoice / Credit Memo Postings			
Please enter batch details...			
Type of postings . . :	IN	(IN=Invoice, CR=Credit note)	
Batch Number :	232323		
Batch Total.....:	120		
Analysis method . . :	2	(1=Default Analysis, 2=Input for each item)	
Intercompany posting:	1	(0/1)	
F3=Exit			

Fields:

Type Of Posting

Enter IN for invoice, CR for credit note. (For journal postings, it is fixed-JL).

Batch Number

If the field display a number must be specified. It is recorded on the session control record for enquiry and reporting purposes. If the batch number has previously been used, a warning message displays. To override the warning, press **F19**.

Batch Total Value

This must be specified if batch controls are used, but does not restrict the value of documents subsequently entered.

At end-of-batch, the value of documents entered is checked against this, and both are displayed. Because a batch may contain values in several currencies, it is a "hash" total only.

Analysis Method

The entry made here determines how General Ledger postings will be made:

- 1 - Post to the General Ledger account specified on the company profile.
- 2 - Enter a specific General Ledger account for each transaction. This is the default.

Inter-Company Posting

This indicates whether you want to post transactions between Accounts Receivable companies.

- 0 - Is the default and does not allow inter-company posting.
- 1 - You want to allow inter-company posting.

*Note: The option to use batch totals when entering transactions is specified in the company profile. If you have chosen to use batch totals then the Batch Number and Batch Total fields will be displayed on the screen; otherwise the fields are hidden. When you have completed all fields to your satisfaction, press **Enter**.*

Invoice Postings Customer Selection Screen

Complete the batch details screen and press **Enter** to display this screen.

Select a customer for the posting.

SL180	EI - Demonstration Company	User ED3	15/03/94
			15:24:44
Invoice Postings			
4 Account	Name	Ref.	Value Cur. Base Value
Account code ? <u>FC02</u>			
F4=Prompt F23=Cancel batch			

Fields:

Account Code.

If known, enter the account code associated with the customer for which documents are to be posted.

Reverse Sign

If you are posting a credit and you are using the reverse sign function (set up in Country-Specific Parameters), then the reverse sign field will be displayed.

Enter 1 to reverse the sign.

This function is used mainly to correct a previous entry, and is available only when entering a posting type of CR (credit) or JL (journal - via Journal Log Entry).

Functions:

F23

Cancel the session.

Select an account and press **Enter** to display the header information screen.

Invoice Postings Header Information Screen

Press **Enter** to display the header screen:

Enter invoice details including goods, VAT and currency values.

SL180	E1 - Demonstration Company	User ED3	15/03/94 15:25:23
Invoice Postings			
4 Account	Name	Ref.	Value Cur. Base Value

VAT Value . . :	18.60	18.60 002 ?	Societe Chimique
Total . . . :	130.60		Zone Industrielle
Discount . . :	12.00		Bayonne
Date Due . . :	130694		France
Description :			
Text? . . . : 0 (0/1)			
VAT Calc. : 1 (0.1.2)			
Currency . . ?	FRF Francs	Rate Code . .	PERD Rate . . D 8.61800
F4=Prompt F12=Previous F17=Override rate F18=Pounds F23=Cancel batch			

Fields:

Period

Enter the posting period (format YYPP) to which this transaction is to be posted.

Doc. Date

This field is mandatory entry. Enter the date of the invoice or credit note being processed. The payment due date will be calculated from this date. This field defaults to the system date.

Goods

Enter the total value of the goods on the invoice excluding any VAT.

If you do not know the value of the goods excluding VAT, you can leave this field blank and use VAT calculation method 2 and the gross invoice value to calculate the net goods value.

VAT Value

Enter the VAT total for the goods, if applicable.

If you leave this field blank, the system calculates the value based on the value of the goods, or the total value and the rate or VAT code you select.

This field allows you to override the calculated value of the VAT providing it lies within the VAT limits allowed by the General Ledger.

You must use VAT calculation 1 if you enter the net goods value. Use VAT calculation method 2 if you enter the gross value.

Rate

Enter the VAT rate which the system uses specifically for this invoice or credit note. If you enter a rate in this field the system calculates the VAT value. This field can be left blank and it will be picked up from the VAT code.

Cde

The default VAT code that was defined upon the company profile is displayed. This code may be overridden to any other code defined to the system.

When you enter a VAT rate which differs from the rate defined by the VAT code, the system uses the entered rate providing it lies within the VAT limits allowed within the General Ledger.

If extra rate VAT applies to this customer, the rate applied is the basic rate plus the extra rate for this rate code.

If settlement discount applies to this transaction, the calculation of VAT depends on the discount basis of the VAT record.

The VAT codes are defined on the General Ledger VAT options.

Total

You can enter the total value (goods + VAT) of the invoice or credit note. If you leave this field blank, the value is calculated if the goods value is entered.

Discount

Entry of information into this field is optional. A value or percentage rate can be specified. If a value is specified this will be converted to a percentage for the entry of dissections.

Discount Rate

Optional entry. A discount rate may be entered which will be applied to the goods value entered.

Discount Code

Optional entry. A discount code may be entered which will be applied to the goods value entered. Discount codes are defined on the Cash Management maintenance options.

Date Due

This field can only be entered if 'override due date' is allowed in the company profile. Enter any date to override the calculated due date. If omitted, a date is calculated from the customer's terms.

Description

Optionally, enter a brief description of this transaction.

Text Entry

Optional. Enter 1 if you wish to enter text.

Reason Code

This field is displayed only when entering credit notes, and when displayed it must be completed. Reason codes are defined on the Accounts Receivable Maintenance options.

VAT Calc

The value set in Country Specific Parameters defaults here. Select a calculation method:

0 - Enter all invoice values manually.

1 - Enter the goods value and the VAT rate or code. The system then calculates the VAT value and the invoice total value.

2 - Enter the VAT rate or code and the invoice total value. The system calculates the goods value and the VAT value.

Currency

The default currency code for the selected customer is displayed. You can change the code to any valid currency.

Currency Rate Code

The default rate code (from the company profile) is displayed. It can be changed by pressing **F17**.

Functions:

F17

Override Rate. Change the current currency conversion rate. For more information see Invoice Postings - Override Conversion Parameters Window

Note: Where the source and target currencies are both Euro currencies no override is permitted.

F18

'Currency e.g. Pounds'. Display the header values in base currency.

F23

Cancel Batch. Cancel the session.

Press **Enter** to validate the transaction details.

Override Conversion Parameters Window (F17)

Override the default currency rate. To override the current rate you enter either:

- A predefined rate code specified on the General Ledger currency options.
- A new rate by which the value is to be multiplied or divided.
- The target value. The conversion rate will be calculated by the system.

Note: Where both the source and target currencies are Euro you may not override the conversion rate.

Press **F17=Override Rate** at the Invoice Posting Screen to display this window.

4	Account	Name	Ref.	Value	Cur.	Base value

				Rate code: SELL	Rate . :	
F4=Prompt F12=Previous F17=Override rate F18=DEM F23=Cancel batch MA a MW 16/041						

Fields:

Rate Code?

Select a pre-defined rate code as set up in the Currency Rate code option.

Rate

Or, you may enter the new rate code to be used with up to five decimal places.

Multiply Or Divide

If this field is used, a value must be entered in the Rate field.

M - Multiply the values held in the source currency by the exchange rate to achieve the target currency value.

Note: For Euro conversion the system holds Euro/target fixed rates.

Note: For guidance on when to select Multiply or Divide in a Euro IN/OUT OUT/IN situation see the section Eurocurrency: Phase 1: Illustration Of Conversions.

D - Divide values held in the source currency by the exchange rate to achieve the target currency values.

Source to Euro

Note: This field displays when either the source or target currencies are currencies IN the Euro Zone.

The values of 0 or 1 default from the Euro Currencies Maintenance Option and decide the calculation rules.

0 - The currencies will be converted directly.

1 - Uses a triangulation currency conversion via the Euro currency.

Target Currency Value

Enter the target currency value and the system will calculate the rate.

Note: Only the variable part of the rate displays if the currencies are Euro OUT/IN or IN/OUT.

Press **Enter**, to see the rate applied to the converted currencies.

Invoice Postings Base Currency Window (F18)

The window displays values in, goods value, VAT value, total and discount in base currency for your information only.

Press **F18='Currency'** on the Invoice Postings - Header Information screen to display the Base Currency window.

	Quantity . .
	Line desc . .

F4=Prompt	F8=Update Ledger	F11=Cancel item	F22=Display extension codes
MB a	MW		20/048

Fields:

Account

This is mandatory when a goods value is specified on the item.

If this is a memo account any values entered are not accumulated into the totals. The account type, either memo or fiscal, will be displayed when added to the list. (See General Ledger for a full description of fiscal and memo accounts).

Goods

The value of the goods amount of the invoice line.

The total of all such analysis values, except for memo accounts, must equal the Accounts Receivable documents goods value. Note that this value may be negative.

VAT

The code specified on the document details screen is shown as a default, but can be changed to another valid VAT code.

If the GL Account entered has a VAT code assigned to it then you must use that code.

Note: A VAT code is assigned to a GL Account at the Accounts Maintenance option.

VAT Value

The VAT value is calculated from the VAT code, if the value is not entered.

Note: VAT values may be entered together with the account number and goods value, or on separate VAT-only dissections.

Ic

Enter the company code for inter-company accounting.

Note: This field displays when you are authorised for inter-company accounting.

Quantity

This is an optional reference field. If entered, the value is posted with the associated dissection and can be seen within the General Ledger.

Line Desc

Enter a description of the General Ledger transaction.

The gross value entered on the header screen will be entered in the fields at the bottom of the screen. Once one dissection has been entered, press **Enter**. If you are using General Ledger extension codes, a window will be displayed to enable you to confirm or amend the extensions shown.

Press **Enter** to accept the extension codes, and the dissection you have entered will be displayed at the top of the screen, leaving the entry fields empty for the next dissection.

1 - To amend a dissection, enter 1 beside the line to be amended and press **Enter**. The details of that line display at the bottom of the screen, and can then be maintained.

Functions:

F8

Update the ledger.

F11

Cancel this item.

F22

Toggle between displaying the dissection description and the extension code.

Press **F8=Update Ledger** when the items values

and entry are correct.

Invoice Postings Completing a Session Screen

When you press **F8** to update the ledger, you will be returned to the customer select screen.

The entries you have made will be displayed at the top of the screen, and you can now select another customer and continue to enter postings if you wish.

When completed the final screen displays with batch totals. Comparing the batch total entered at the session start with the actual total posted. Any discrepancy is displayed for information only.

Review Items. Redisplays the session details.

F19

Enter more items.

F23

Cancel the batch.

Enter all of your postings and press **F8** to complete the session. A screen similar to the Invoice Postings screen displays.

Reviewing Session Details (F15)

If you decide to review the items within the session, press **F15=Review Items**.

Select an item with 4 to delete.

Press **F12=Previous** to return to the session end screen.

Adjustment Journals

1... **2/ARP**
2...

You are provided with the facility to enter adjustment journals which are used to correct invoice or credit note postings or enter ad hoc charges.

Journal postings are made using reason codes which identify the General Ledger account code to which the adjustment is posted. The opposite entry is automatically made to the debtors control account specified in your company profile. You do not split goods and VAT values, so no dissection entry screen appears.

Adjustment Journals Starting a Session Screen

Select the processing option Adjustment Journals to display the Adjustment Journals - Starting A Session screen.

Enter batch number and total.

SL180	E1 - Demonstration Company	User ED3	15/03/94 16:01:51

Item Transfer

1...
2...

3/ARP

Transfer journals are used to transfer an item from one customer account to another, for example, when an item has been posted to the wrong account. The transfer journal may also be used to change the reference or date, while keeping the item on the same account.

Additional Notes

If the transfer is between two customers with different General Ledger control accounts, this procedure transfers the value of the item between the two accounts.

If the original transaction is transferred to another customer account as an outstanding item it will appear on the target customer account with its original reference. That original transaction will be replaced on the source customer account by a cleared item with an automatically assigned transfer reference.

- This assigned reference will not appear on the source customer's statement.

If your item reference number was changed at the time of the transfer, the item will appear on the target customer account with this new reference. The source account item reference will be replaced by a cleared item with the original reference.

- This original reference will not appear on the customer's statement.

When you perform an item transfer the system will recalculate the due date of the transaction. The recalculation will be based on the payment terms of the target customer and the revised due date will display on the transfer request screen. If due date override is allowed for your Account Receivable company the revised due date can be changed prior to the transfer update.

If your original transaction requires re-categorisation e.g. UK sales instead of European Sales, you may make journal adjustments using the General Ledger Journal Processing option.

Transfer Journals Selection Screen

Select the processing option Item Transfer to access the following fields:

Fields:

From Account

Enter the customer from whom the transaction is to be transferred.

To Account

Enter the customer to which the transaction is to be transferred.

If you want to amend the reference number or posting date for a selected customer, then you must enter the same account code in both fields.

Transfer Journals Amendment Screen

Complete the fields and press **Enter** at the previous Transfer Journal s and the Transfer Journals - Amendment screen is displayed.

Fields:

Reference

If the original reference of the document is to be changed when either transferring to the new account or amending the reference, enter the new code in this field. The reference used must be unique in this ledger.

Document Date

The date of the document may be changed if required. It should be noted that this will also change the due date of the document.

Period

This displays the period of the transferred transaction.

Due Date

This field displays the due date of the transferred transaction. If the due date override is allowed, you can change it.

When you have amended the fields as necessary, press **Enter** to confirm, then **F8** to update.

Contra Accounting

1...
2...

4/ARP

Contra accounting is when for a trading partner is both a customer and a supplier. This situation can arise with an external company or between companies within the same group. In such situations companies need not exchange payment, but agree to net off their respective accounts, often sending a payment to balance off the agreed figure on both the customer and supplier accounts.

If a trading partner is both a supplier and a customer the Accounts Receivable application allows you to establish a link between the supplier account in the Accounts Payable application and the customer account.

Example Contra Accounting

For example, your company buys from and sells to A.B.Tools Ltd. In Accounts Receivable this company is set up as customer number CABT64, while in Accounts Payable the company is set up as supplier account SABT50. When you come to settle your supplier account, the system allows you to reduce the payment by the amount owed by A.B.Tools.

To use this facility in Accounts Receivable, you must identify the supplier account SABT50 as the contra account related to the customer account CABT64. This is set up in the maintenance option Names and Addresses. There is no need to enter the corresponding account in Accounts Payable, this is done automatically.

If a customer's account is part of a hierarchy, then the customer's account used as contra must be the allocation level.

Revaluation

If you indicate that items are to be revalued and you have changed the currency conversion rates, then the following rules apply when you are netting off items:

- Allocate in prime - when customer currency and supplier currency are the same, and revaluation is required, the realised gains and losses are calculated automatically.
- Allocate in base - when the customer and supplier currencies are different, the allocation and realised gains and losses are calculated in base.
- Allocate in revalued base - when a revalued rate is specified, allocation is performed in revalued base.

Contra Accounting Selection Screen

Select the processing option Contra Accounting to see the customer selection screen. Then press **Enter** to display the Contra Accounting - Selection screen.

F3=Exit F4=Prompt F16=Override Customer Currency Rate F17=Override Supplier Currency Rate			

Fields:

Customer

When you enter the customer, the system automatically completes the customer currency, supplier account code and the supplier currency.

Text

Enter 1 to enter customer text, if required.

Customer Currency

The system displays the default currency for the selected customer. If you want to use a different currency, enter a currency code.

If you clear the field, the system uses the default currency defined in the Accounts Receivable Company Profile.

Revalue Items

This field enables you to override the customer default conversion rate.

0 - Leave values at current rate.

1 - Apply new conversion rate.

Conversion Rate

This allows you to enter an exchange rate value directly providing that you have not selected a standard rate code. You can indicate whether the code should be used to multiply or divide by entering M or D in front of the value.

Supplier

When you enter the customer, the supplier defined as the contra accounting account for that customer is displayed here.

Text

Enter 1 to enter supplier text, if required.

Supplier Currency

The system displays the default currency for the selected supplier. If you want to use a different currency, enter a currency code.

Revalue Items

This field enables you to override the supplier default conversion rate.

0 - Leave values at current rate.

1 - Apply new conversion rate.

Conversion Rate

This allows you to enter an exchange rate value directly providing that you have not selected a standard rate code. You can indicate whether the code should be used to multiply or divide by entering M or D in front of the value.

Include Disputed Invoices

You can indicate whether the system should display invoices which are subject to dispute.

Date To Be Used For Discounts

Where early settlement discounts may be taken, the date indicated (default is current date) is used when calculating whether a discount is allowable.

Functions:

F16

If the customer Revalue Items field is set to 1, and the customer currency is not the base currency, this function key displays a window to enable you to change the currency rate.

F17

If the supplier Revalue Items field is set to 1, and the supplier currency is not the base currency, this function key displays a window to enable you to change the currency rate.

C:1=Clear T:1=Text
 F8=Update F12=Previous F15=Payables F16=Clear All F17=Position
 F18=References

Fields:

C(Lear)

Enter 1 here to allocate the entire value of the item. Leave the field blank for part allocation.

Part Value

If you wish to allocate only part of the value, enter the value to be allocated here.

Discount

If you have a discount arrangement with the customer, then enter the discount value in this field. You must use the part value field to enter the actual payment if a discount is entered.

If you are clearing the whole value, then you must ensure that the sum of the part value and the discount is equal to the total value of the transaction.

T(Ext)

Enter 1 if you want to enter text for the transaction.

To allocate or part allocate the items displayed as required, then press **F15=Payables**. This will display the Payables items instead of the Receivables items, and the total value of items selected on the Receivables screen can be seen

at the top of the new screen.

Use this screen to select Payables items in the same way. You can use **F15** to toggle between the screens, altering selections as necessary, until the Receivables total at the top of the screen equals the Payables total. You can then update using **F8**.

Functions:

F15

Toggles between Receivables and Payables items for allocation.

F16

Automatically allocates all items.

F17

Repositions the list of items displayed, to save rolling through them.

F18

Displays a window (see below) to enable you to enter item references for allocation.

If the customer and supplier transactions selected do not balance, then you have one of three options:

F19

This enables you to make manual adjustments to the balance.

F21

This function will make an automatic adjustment of the discrepancy in the balances. An underpayment will be created for a negative value, an overpayment for a positive value.

F22

This function will write off the difference, provided that it does not exceed the write-off limit in the company profile.

Press **F18** to display the Contra Accounting - Allocation Item References window.

Contra Accounting Allocation Item References Window (F18)

Press **F18** to display the Contra Accounting - Allocation Item References window.

F21

Enables you to enter or amend customer or item text.

When you have completed your amendments, press **Enter**. The amended details are displayed for confirmation. Press **Enter** to amend further, or **F8** to update.

Cancelling Payments

1...
2...

42/CSP

Please use the equivalent Cash Management option to cancel payments.

Update Statistics

41/ARP

This option submits a batch job to calculate the statistics displayed by the Credit Manager enquiry.

No parameters are required, as they are maintained using the AR maintenance option Trend Parameters.

This job should be run frequently, to keep the credit manager information up to date. It could be included as part of the auto day end routine.

Select the AR processing option Update Statistics, then press **F8** to submit the job.

The calculations for the credit manager ratios are explained at the beginning of Enquiries.

General Provision

51/ARP

The General Provision and Specific Provision options work together to provide a means of providing for the possibility of bad debt.

Before using this option you must first specify the General Ledger accounts to which the provisional postings are to be made. This is done using the General Ledger audit option Debtor Provision Accounts. See General Ledger for details on how to use the option.

Once your General Ledger accounts are specified, you can use both this option and the Specific Provision option to define how you wish your bad debt provision to be made. There are two methods:

- Specify the percentage of the aged debt by overdue period.
- Specify the percentage of the total sales value which is to be posted as a provision.

The difference between the two options is that the Specific Provision option processes only those customers with a legal status of L, while the General option processes all customers except those with a status of L. This status is set up via the Customer Maintenance (Names and Addresses) option.

Select the AR processing option General Provision, to display the General Provision - Selection screen.

General Provision Selection Screen

Select the AR processing option General Provision to display the General Provision - Selection screen.

SL121	Y0 - Education Company - Y0	User FFY0	6/04/95 11:58:28

	Not yet due		.00
	1 - 30		.50
	31 - 60		1.00
	61 - 90		1.00
	91 - 120		5.00
	121 - 150		10.00
	151 +		.00
OR	Sales		.00
F3=Exit		F12=Previous	

Fields:

%

Enter the appropriate percentage(s). You cannot enter values for both overdue categories and for sales total.

Note that you cannot enter this screen until the general/specific provision accounts have been set up using the GL audit option Debtor Provision Accounts.

There are two methods of creating the provision.

Age of Debt Provision

If you wish to increase the provision made according to the age of the debt, then enter the appropriate percentage against each interval shown on the screen.

These intervals are set up in the Accounts Receivable Company Profile. They are used by the Update Statistics option to analyse the customer balance, and this processing option must be run regularly to maintain the correct balances.

Percentage of Total Sales

If you wish to define your debt provision as a percentage of total sales (this figure includes VAT), enter that percentage here.

Press **Enter**, and a batch job makes the General Ledger postings against the journal reference you entered at the top of the screen, reversing out any previous provision for the accounts selected.

Specific Provision

52/ARP

The Specific Provision option works together with General Provision to provide a means of providing for the possibility of bad debt.

Before using this option you must first specify the General Ledger accounts to which the provisional postings are to be made. This is done using the GL audit option Debtor Provision Accounts. See General Ledger for details on how to use the option.

Once your General Ledger accounts are specified, you can use both this option and the General Provision option to define how you wish your bad debt provision to be made. There are two methods:

- Specify the percentage of the aged debt by overdue period.
- Specify the percentage of the total sales value which is to be posted as a provision.

The difference between the two options is that the Specific Provision option processes only those customers with a legal status of L, while the General option processes all customers except those with a status of L. This status is set up via the AR maintenance option Customer Maintenance (Names and Addresses).

The screen sequence and fields displayed are exactly the same as for the General Provision. Refer to the General Provision section for details of screens and entries.

Write Off

53/ARP

This option enables you to select a customer and write off any open items, as required.

Select the AR processing option Write Off to display the Write-Off Account Items - Selection screen.

Write-Off Account Items Selection Screen

Select the AR processing option Write Off to display the Write-Off Account Items - Selection screen.

Fields:

Enter Account

Enter the customer whose debt is to be written off.

Reason Code For Write-Off

A reason code must be entered for the posting which will write off the debt.

Press **Enter** to display a list of open items for the customer.

Account Item Write-off Item Details Screen

Select items to be written off. You may list all items for a selected currency.

Enter 1 against the items to be written off. If the list is extensive, you can select all items by pressing **F17**, then enter 2 against items to be omitted from the write-off process.

When you have made your selection, press **Enter**. The **F8** key will appear at the bottom of the screen. Press **F8** to submit a job which will write off the items selected.

Mass Transfer

54/ARP

This option enables you to transfer some or all open items for a customer to a different customer account.

The function is provided specifically to comply with French requirements regarding customers whose businesses are in the hands of receivers. This states that all balances for such customers must appear on a separate General Ledger account from that used for other debt. However this option could be used to transfer open items to another customer regardless of legal status, for example in the case of a take-over.

The process thus involves setting up a separate account for the customer, which points at the separate General Ledger account, and then transferring the items using this option.

Select the AR processing option Mass Transfer to see the selection screen.

Transfer Account Items Screen

Fields:

From Account

Enter the existing customer here.

To Account

Enter the target account here.

Status For To Account

Set the customer status to L (legal) or U (uncertain) as required. Can be left blank if only a selection of transactions is to be transferred, or if a straightforward account transfer is required.

Press **Enter** and the Account Item Transfer - Item Details screen displays a list of open items for the 'From' account.

Account Item Transfer Item Details Screen

Press **Enter** and the Account Item Transfer - Item Details screen displays a list of open items for the 'From' account.

Fields:

Position To

Enter the item type and reference at which you wish the item list to begin. Press **Enter**.

Currency

Enter a currency and press **Enter** to see a list of items for the customer which are held in the chosen currency.

X

Enter 1 against the items to be transferred. If the list is extensive, you can select all items by pressing **F17**, then enter 2 against items to be omitted from the transfer process.

When you have made you selection, press **Enter**. The **F8** key will appear at the bottom of the screen. Press **F8** to submit a job to transfer the items selected.
