Chapter 2

Processing

Purchase Order Override

1/WTP

Use this option to override a purchase order. The information you can override is defined by the Intrastat mask for the acquiring country.

You can override the details set up on World Trade supplier and item files for a particular order. When you acknowledge receipt of the goods, a World Trade acquisition movement is created. This is updated when you match invoices.

However, any data you enter using this option supersedes data entered at receipt of goods and invoice matching.

Note: If you define the defaults correctly, you should rarely need to use this option.

Purchase Order Override Selection Screen

To display this screen, select Purchase Order (Over Overrides).

Use this screen to enter the order number that you want to override.

Fields:

Order Number

Enter the purchase order number of the order to override.

Press **Enter** to validate order number entry, and display the Purchase Order Override Header Screen.

Note: The fields displayed against each line are determined by the Intrastat mask defined for the acquiring country.

Functions:

F13

Order Enquiry. Use this function to display the Order Summary from Purchase Management.

Select **F8=Update** to save the changes and return to the previous screen.

Purchase Order Line Details Window

To display this screen, select an order line on the Purchase Order Override Header Screen.

Use this screen to enter the line details of the purchase order.

WT100	Z1 - Demonstration Company	USER SP1	22/09/94 15:42:20

Acquiring country?.. FR France

Statistical procedure

Item	Terms Del	Coun Org	Reg	Port Arr	Port Tran	Ancillary Price	Nature Trans
<u>1</u> 5001	<u>CIF</u>	<u>GB</u>		<u>CALAI</u>		12.23000	<u>10</u>

F3=Exit F4=Prompt F8=Update F12=Previous

1=Select
F3=Exit F4=Prompt F8=Update F12=Previous F13=Order Enquiry

Fields:

Terms Del

Enter the terms of delivery, for example, ex Works.

This field defaults from the supplier despatch address. If this is blank then the value for the accounting address is used. If this is blank, then the Terms Of Delivery on the company profile is used.

Note: The fields displayed depends on the Intrastat mask of the acquiring country.

Coun Org

Enter the country of origin for this order line. This defaults from the World Trade item record.

Regi

Enter the region of destination for this order line. This defaults from the World Trade stockroom record.

Port Arr

Enter the port of arrival for this order line.

This field defaults from the supplier despatch address. If this is blank then the value for the accounting address is used. If this is blank, then the Port Of Arrival on the company profile is used.

Port Trans

Enter the port of transshipment for this order line.

This field defaults from the supplier despatch address. If this is blank then the value for the accounting address is used. If this is blank, then the Port Of Transshipment on the company profile is used.

Ancillary Price

Enter the CIF (Carriage, Freight and Insurance) price for one item.

Nature Trans

Enter the nature of transaction, such as sale, hire.

If you leave this blank, the goods inwards process determines the nature of transaction.

Select **F8=Update** to save changes and return to the previous screen.

Sales Order Override

2/WTTP

Use this option to override a Sales Order. The information you can override is defined by the Intrastat mask for the disposing country.

A World Trade disposal movement is created by one of two options.

- After you confirm despatch within Sales Order Processing, you can run a batch job from World Trade to create the movements.
- Create the movements automatically by the Print Invoice option.

Use the World Trade batch job if you are closing the VAT period but you do not want to print invoices until a later period.

However, any data entered using this option supersedes data entered elsewhere.

Note: If you define the defaults correctly, you should rarely need to use this option.

Sales Order Override Selection Screen

To display this screen, select Sales Order (Order Overrides).

Use this screen to enter the sales order number of the order to be overridden.

Fields:

Order Number

Enter the sales order number of the order to be overridden.

Press **Enter** to validate order number entry. The Sales Order Override Header screen is displayed.

Sales Order Override Header Screen

To display this screen, enter a sales order and press **Enter** on the Sales Order Override Selection Screen.

Use this screen to enter the Sales Order Override header information.

F3=Exit F4=Prompt F8=Update F12=Previous F13=Order enquiry										

Fields:

Dsp Cty

Enter the country in which the company acquired the goods. This is normally the country from which the goods are moved. This field defaults from the World Trade stockroom details. If this is not specified, then the default country on the company profile is used.

Terms Del

Enter the terms of delivery, for example, ex Works.

This field defaults from the customer delivery address. If this is blank then the value for the statement address is used. If this is blank, then the Terms Of Delivery on the company profile is used.

Note: The fields displayed depends on the Intrastat mask of the acquiring country.

Coun Org

Enter the country of origin for this order line. This defaults from the World Trade item record.

Reg

Enter the region of despatch for this order line. This defaults from the World Trade stockroom record.

Port Desp

Enter the port of despatch for this order line.

This field defaults from the customer delivery address. If this is blank then the value for the statement address is used. If this is blank, then the Terms Of Delivery on the company profile is used.

Port Trans

Enter the port of transshipment for this order line.

This field defaults from the customer delivery address. If this is blank then the value for the statement address is used. If this is blank, then the Terms Of Delivery on the company profile is used.

Nature Trans

Enter the nature of transaction for this order, such as sale, hire.

If you leave this blank, the invoicing process determines the nature of transaction.

Ancillary Price

Enter the FOB (Free On Board) price for one item.

Statistical Procedure

Enter the statistical procedure to report on the Intrastat .

This field defaults from the supplier despatch address. If this is blank then the value from the statement address is used.

Select **F8=Update** to save changes and return to the previous screen.

Create Disposal Movements

11/WTP

This is a batch job designed to create the movements for sales orders not yet invoiced. You can maintain movements and report on them in the correct period even though processing for the order is not complete.

The invoice print job in Sales Order Processing updates movements created through this World Trade option with the invoice number.

To run the batch job, select Create Disposal Movements, then select **F8=Update** to submit the job.

Service Disposal Movements

12/WTP

This is a batch job.

To run the batch job, select Service Disposal Movements, then select **F8=Update** to submit the job.

Maintain Movements

13/WTP

Use this option to maintain details about any EC movement of goods. You can add extra data for EC reporting and export documentation. The basic information about these movements is created through interfaces to relevant applications.

There may be instances where a movement has not been created by the linked distribution applications, but you need the data for Intrastat purposes. For example, if an asset purchase takes place without a purchase order being raised. Use this option to add such a movement manually.

EC Movement Maintenance Selection Screen

To display this screen, select Maintain Movements.

Use this screen to enter the selection criteria for the movement you want to maintain.

WT455	Z1 - Demonstration Company	User SP1	22/09/94 16:07:39
EC Movement Maintenance			
Acquisition/Disposal .. 2 (1=Acq,2=Dis)	Order number	0000027	
Movement source S	Line number	—	
Manual number	Sequence number	—	
	Despatch number	—	
	Invoice number	—	
	GRN number	—	
F3=Exit F6=Add Movement			

Fields:

Acquisition/Disposal

Enter one of the following:

- 1- Acq. To maintain information about acquisitions (receipts).
- 2 - Dis. To maintain information about disposals (supplies).

Order Number

Enter the order number (purchase or sales) of the order associated with the movement to be maintained. This is not valid for manual movements.

Movement Source

Enter one of the following to define which application created the movement:

- J - Service Management.
- M - Manual movement entered in World Trade.
- P - Purchase Management.
- S - Sales Order Processing.
- T - Distribution Orders from DRP or World Trade.

Line Number

Enter the line number within the order to further define the movement to be maintained. This is not valid for manual movements.

Sequence Number

For a scheduled purchase order, enter the sequence number within the order to further define the movement to maintain. This is not valid for manual movements.

Manual Number

Enter the sequence number of a movement previously created using this option. The number is automatically allocated when you create a movement. This field is only valid for manual movements.

Despatch Number

Enter the despatch number (picking note sequence number) to further define the movement to maintain. This is not valid for manual movements.

Invoice Number

Enter the invoice number to further define the movement to maintain. If you enter an invoice number, do not enter an order, line, sequence or despatch number. This is not valid for manual movements.

GRN Number

Enter the goods received note number to further define the movement to maintain. This is not valid for manual movements.

Functions:

F6

Add Movement. Use this function to add a new manual movement.

Either enter the selection criteria, or select **F6=Add Movement**. The EC Movement Maintenance Details Screen is displayed.

EC Movement Maintenance Details Screen

To display this screen, either enter the selection criteria, or select **F6=Add Movement** on the EC Movement Maintenance Selection Screen.

The fields show the default values held on the system for the selected movement. You can change these for reporting or documentation purposes.

Tip: If more than one movement meets the criteria entered on the selection screen, **F7=Next** displays the next movement in the group.

9-26		SA		MW		K5 CL IM DM II	
STUD140		KB		PKH31251			

Fields:

Item

Enter an item for the movement.

Movement Reference

Enter a reference for this movement. The reference should link the movement to source documentation. This is mandatory for manual movements.

Disposing Country

Enter the country from which the goods were moved. This is a mandatory field.

Acquiring Country

Enter the country to which the goods were moved. This is a mandatory field.

Disposing Region

Enter the region for the disposal movement.

Note: This field displays only if Non-UK Reporting is set to 1 in the Company Profile.

Acquiring Region

Enter the region for the acquiring movement.

Note: This field displays only if Non-UK Reporting is set to 1 in the Company Profile.

Report On Intrastat

Enter one of the following:

0 - Not to include the movement on the Intrastat.

1 - To include this movement on an Intrastat report.

Report On ESL

Enter one of the following:

0 - Not to include the movement on the ESL report.

1 - To include this movement on an ESL report.

Note: Only despatches are ever printed on an ESL.

Nature Transaction

Enter the Nature of Transaction (such as sale, hire) for this movement of goods. The application recognises the nature of transaction from the movement type and commodity type associated with the item.

Process Indicator

Enter one of the following:

0 - Not to set the process indicator.

1 - To set the process indicator on for the ESL report. This means the goods are moving to or from sub-contract operations.

Process Value

If the process value is set to 1 then enter the value of the invoice that corresponds to the value of the sub-contract operations.

If the process value is set to 0 then enter 0 or leave blank.

Movement Date

Enter the date of the movement of goods. This defaults to the current date when creating manual movements.

The Tax point date is the earlier of:

- 15th of the month after the movement date, or,
- Invoice date.

If goods are invoiced more than a month before delivery, the tax point date is set as the movement date.

Invoice Date

Enter the date of the invoice corresponding to the movement of goods.

VAT Country

Enter the country in which this company is registered for VAT purposes.

Supplier/Customer

If this is an acquisition movement, enter the supplier, or if this is a disposal, enter the customer.

Note: This field displays only if Non-UK Reporting is set to 1 in the Company Profile.

VAT Registration

Enter the VAT registration number of the recipient of the goods in the acquiring country. This number is reported on the ESL.

Commodity Code

Enter the harmonised commodity code for the goods being moved. The first eight digits are reported on the Intrastat report. Use the remaining digits to enter the full information for exports outside the EC and CAP details.

Siret Number

This is a requirement for the French authorities. Enter the Siret number for this company.

Functions:

F7

Next. If more than one movement matches the selection criteria, use this function to access each movement. After the last qualifying movement, the initial screen is redisplayed.

Note: This does not save any changes.

F13

Quantity Value Information. Use this function to specify Report Movement quantity and value Information. You cannot access this function for manual movements until you have updated the basic details.

F14

Transport Information. Use this function to specify Reportable Movement Transport Information. You cannot use this option for manual movements until you have updated the basic details.

Select **F8=Update** to save any changes. For manual movements the system assigns a reference number at this point. Then select **F3=Exit** to return to the menu.

Reportable Movement Quantity/Value Information Window (F13)

To display this window, select **F13=Quantity Value Information** on the EC Movement Maintenance Details screen.

Note: You cannot access this function for manual movements until you have updated the basic details.

Use this window to amend the quantity, currency, and value information for the external documentation.

Fields:

Quantity In Kgs

Enter the quantity in kilograms for the movement of goods.

Quantity In

Enter the unit of measure for the second quantity, if one is required for the specified commodity code.

Quantity

Enter the quantity in the second unit of measure for the movement of goods.

Movement Quantity

Enter a movement quantity for Intrastat and ESL reporting for additional EC countries.

Note: This field displays only if Non-UK Reporting is set to 1 in the Company Profile.

Invoice Value (Currency)

Enter the currency of the invoice for the movement of goods.

Invoice Value (Value)

Enter the invoice value for the movement of goods.

Goods Value

Enter the value of the goods. The order value reported on the Intrastat is in the following order: Invoice value; Order value; Goods value.

The value reported on the ESL is in the following order: Invoice value; Order value.

Ancillary Value (Currency)

Enter the currency used for the ancillary value.

Ancillary Value (Value)

Enter the ancillary value for the movement of goods. The ancillary value is the CIF (Carriage, Freight and Insurance) value for acquisitions and the FOB (Free on Board) value for disposals.

Press **Enter** to save the changes and return to the previous screen.

Reportable Movement Transport Information Window (F14)

To display this window, select **F14=Transport Information** on the EC Movement Maintenance Details screen.

Note: You cannot access this function for manual movements until you have updated the basic details.

Use this window to amend the terms of delivery, origin, and port details for external documentation.

Fields:

Terms Of Delivery

Enter the terms of delivery (for example, Ex Works).

You can enter a fourth digit of either 1 or 2 depending on your country's requirements on terms of delivery.

Note: The fourth digit is available if Non-UK Reporting in your company profile is set to 1.

Mode Of Transport

For disposals, enter the mode of transport as the goods left the disposing country.

For acquisitions, enter the mode of transport as the goods arrived in the acquiring country.

Country Of Origin

Enter the country of origin for these goods.

Region Of Origin

For disposals, enter the region of despatch.

For acquisitions, enter the region of destination.

Port Of Arrival/Despatch

For disposals, enter the port of despatch from the disposing country.

For acquisitions, enter the port of arrival into the acquiring country.

Port Of Transshipment

Enter the port of transshipment for the movement of goods.

Statistical Procedure

Enter the statistical procedure for the movement of goods.

Regime

Add the Regime for the movement. This must be defined to the Inventory Descriptions file, major type RGME. This is for French and Italian reporting.

Press **Enter** to save changes and return to the previous screen

VAT Accruals Posting

21/WTP

This process generates postings to the General Ledger VAT accounts and to the VAT subsystem for EC movements of goods recorded in World Trade.

These postings are made depending on the tax point date determined for the movement. The accrued VAT is realised at the point of invoice matching or printing but the accrued charge must be traceable from the tax point date associated with the movement of the goods.

Tax point days are the 15th day of the month following the movement date or the date of issue of the invoice, whichever is earlier. However, if goods are invoiced more than a month before delivery, the tax point date is set as the movement date.

For example

Movement Date	Invoice Date	Tax Point
13/03/95	10/04/95	10/04/95
13/03/95	19/04/95	15/04/95
13/03/95	04/01/95	13/03/95

Types of Tax Posting

There are two classes of movement requiring tax postings made on the information from World Trade. This gives rise to two types of processing:

- Reversals - Movements for which an invoice is expected, but the 15th of the month rule has triggered the tax point.
- Simple Postings - Movements for which an invoice will never be received, that is the transfer of goods within a company across an EC border.

Reversals

For a movement where an invoice is expected, but the expected date is beyond the current tax period, a reversal is posted for the tax. A debit is posted before closing the VAT period. This establishes a VAT accrual. This is balanced in the next VAT period by posting a corresponding credit, essentially reversing the posting.

The sequence of post and reverse continues until either an invoice is printed in Sales Order Processing or matched in Purchase Management. The posting of the invoice posts the tax to the General Ledger VAT accounts and the VAT subsystem. When you do the final posting of the invoice, the reportable movement is flagged to prevent further accruals being posted.

Note: It is the VAT periods, not the GL periods, that are critical to this operation.

For example:

Acquisition VAT of £10.00 from movement of goods on 10/01/93, invoice date 18/07/93.

Tax periods calendar quarterly.

Period	Acquisition VAT	Input VAT	
9301	£10	£10	Accrual at 31/03/93
9302	£10- £10	£10- £10	Accrual at 31/06/93
9303	£10- £10	£10- £10	Final Invoice Posting

The net effect is the tax was posted in VAT period 9301.

Note: It is essential that the tax postings procedure is run immediately before, the VAT period close. This prevents an invoice being posted in a period after an accrual has occurred for the movement in the same period.

Simple Posting

If no invoice is to be received for a movement, then the process outlined in the Reversals section would continue indefinitely. Therefore, the reversal is not made but the movement is flagged to prevent further processing.

Note: It is essential that the tax postings procedure is run immediately before the VAT period close. This prevents an invoice being posted in a period after an accrual has occurred for the movement in the same period.

VAT Accruals/Postings

To display this screen, select VAT Accruals Posting.

Use this option to perform the necessary postings to the General Ledger relating to non-invoiced VAT. You can make a distinction between acquisition and disposal postings, and simple and reversal VAT postings. This submits a batch job.

WT450	Z1 - Demonstration Company	User SP1	23/09/94 10:05:28
VAT Accruals / Postings			
	Acquisitions	Disposals	
Accruals	1	1	(1=Yes 0=No)
Postings	0	0	(1=Yes 0=No)
General Ledger Posting Period . . 9409			
VAT Period	9404	End Date . . .	31/12/94
Last Period Accrued *none			
F3=Exit F8=Update F12=Previous			

Fields:

Accruals

Enter one of the following for both Acquisitions and Disposals:

0 - No. Not to make postings.

1 - Yes. To make the postings for acquisitions or disposals for which an invoice is expected.

Postings

Enter one of the following for both Acquisitions and Disposals:

0 - No. Not to make postings.

1 - Yes. To make postings for acquisitions or disposals for which no invoice is expected.

General Ledger Period

Enter the General ledger period in which the postings should be made.

VAT Period

Enter the VAT period in which the postings should be made.

Press **Enter** to check the selections. Then select **F8=Update** to submit the postings as a batch job.

System Postings

This details the postings that the VAT accruals posting option generates within the general ledger and the VAT subsystem for each type of transaction.

The following assumptions apply to all examples:

- Value of Movement = £1000
- Current VAT Period = 9803 01/07/98 - 30/09/98
- Current GL Period = 9809 01/09/98 - 30/09/98
- Three VAT codes exist:
 - A Acquisition VAT - 17.5%
 - S Standard VAT - 17.5%
 - Z Zero VAT - 0%
- Date of movement - 20/08/98
- Date of processing - 30/09/98

Note: The tax point date is 15/09/98

Purchase, Invoice not Received

The VAT code is determined using the rules specified for Purchase Management. Example using VAT code A.

GL Postings		VAT Subsystem Postings for VAT code A	
GL Period 9809	£175 Dr	VAT Period 9803	£1000
Input VAT account		Purchase goods value	VAT £175
Output VAT account	£175 Cr	Sales goods value	£1000
			VAT £175
GL Period 9810	£175 Cr	VAT Period 9804	£1000-
Input VAT account		Purchase goods value	VAT £175-
Output VAT account	£175 Dr	Sales goods value	£1000-
			VAT £175-

The fact that VAT code A is for acquisition VAT means that equal amounts are posted to the input and output VAT accounts. The postings to each VAT account is reflected in the VAT subsystem. Because an invoice is expected the postings are reversed in the next period.

Sale, Invoice not Printed

The VAT code is determined using the rules specified for Sales Order Processing. Example using VAT code Z and customer VAT number is known.

GL Postings	VAT Subsystem Postings for VAT code Z	
	VAT Period 9803	£1000
None	Sales goods value	VAT £0
	VAT Period 9804	£1000-
	Sales goods value	VAT £0

Note: There are no general ledger postings because there is no VAT payable on the transaction. However, the value of the goods is recorded in the VAT subsystem so the value of EC supplies and acquisitions can be reported on the VAT Subsystem reports and hence the VAT return.

If the customer's VAT number is not specified, then the VAT code would be S and the postings as follows:

GL Postings	VAT Subsystem Postings for VAT code S	
GL Period 9809 £175 Cr	VAT Period 9803	
Output VAT account	Sales goods value	£1000
		VAT £175
Suspense account £175 Dr		
GL Period 9810 £175 Dr	VAT Period 9804	
Output VAT account	Sales goods value	£1000-
		VAT £175-
Suspense account £175 Cr		

The output VAT must be posted to the General Ledger because there is a liability to customs and excise. There is no corresponding input posting, as there is in the case of acquisition VAT, and the posting to the suspense account is required to balance the journal.

Receipt of Goods, No Invoice Expected

The VAT code is determined using the rules specified for Purchase Management. Example using VAT code A.

GL Postings	VAT Subsystem Postings for VAT code A	
GL Period 9809	VAT Period 9803	
Input VAT account £175 Dr	Purchase goods value	£1000
		VAT £175

Output VAT account	£175 Cr	Sales goods value	£1000
			VAT £175

Since VAT code A is for acquisition VAT, equal amounts are posted to the input and output VAT accounts. The postings to each VAT account must be reflected in the VAT subsystem.

Since no invoice will be received no reversal is created.

Despatch of Goods, No Invoice to be Printed

The VAT code is determined using the rules specified for Sales Order Processing. Example using VAT code Z.

GL Postings	VAT Subsystem Postings for VAT code Z	
None	VAT Period 9803	£1000
	Sales goods value	VAT £0

Note: There are no General Ledger postings because there is no VAT payable on the transaction. However, the value of the goods is recorded in the VAT subsystem so you can report the value of EC supplies and acquisitions on the VAT Subsystem reports and hence the VAT return.

The fact that no invoice is received means that no reversal is created.

Intrastat Reporting

1... **2...** 31/WTP

This option controls the production of Intrastat reports. To produce a report, you must complete four basic steps:

- Select the country for which the report is to be produced.
- Define the timespan the report will cover.
- Verify all data required for the Intrastat in the reporting country is complete.
- Print the report or submit it by Electronic Data Interchange.

Control Intrastat Reporting Select Country Screen

 To display this screen, select Intrastat (EC Reporting).

Use this screen to enter the country for which INSTRASTAT reporting is required.

Fields:

Country

Enter the country for which the report is to be produced.

Note: The report is printed in the format used by the authorities of the selected country.

 Press **Enter** to check the country code and display the Control Intrastat Reporting Processing Screen.

Control Intrastat Reporting Processing Screen

To display this screen, enter a country and press **Enter** on the Control Intrastat Reporting Selection Screen.

Use this screen to enter timespan dates for the Intrastat report.

	0/00/00	0/00/00	
3	1/09/94	30/09/94	Failed verification
-	1/08/94	31/08/94	Printed
1=Test report 2=Verify 3=Display failed items 4=Produce report			
F3=Exit F5=Refresh F12=Previous F23=More options			

Fields:

Start Date

Enter the start date for the next timespan. If this is not the first timespan entered, then the end date is determined according to the following rules:

- If the start date is immediately after the end of the previous timespan, then the end date defaults to the end of the next period.
- If the start date is in the previous timespan, then the previous timespan is divided into two separate timespans.

End Date

This is only valid when you define no timespans. Enter the end date of the first timespan.

Status

This identifies the current condition of the report for this period. You cannot use all selections for all statuses. There five possible statuses are:

- Blank
- Verified

- Failed verification
- Printed
- Submitted by EDI.

Untitled

Selection field. Enter one of the following:

- 1 - Test Report. To print an Intrastat report without any verification. This is available for all statuses.
- 2 - Verify. To validate all the data needed for the Intrastat report is present and valid. If the status is Failed Verification, an exception report detailing the reasons for failure prints. This is available if the status is Blank or Failed Verification.
- 3 - Display failed items. To display and maintain movements that caused a verification run to fail. This is only available if the status is Failed Verification.
- 4 - Produce a report. To print the Intrastat report. This is only valid if the status is Verified. Once submitted, and completed the status is Printed.
- 5 - Submit by EDI. To submit a job to transfer the data for the Intrastat report to the application interface. It is only valid if the status is Verified. Once submitted and completed, the status is Submitted by EDI Application Interface.
- 6 - Produce an audit report. To produce a report of the movements that consolidate to an entry on an Intrastat report. It is only valid if the status is Verified, Printed or Submitted by EDI.

Functions:

F5

Refresh. Use this function to refresh the screen after a job has completed to update the status of the Intrastat reports.

Select **F3=Exit** to leave the screen and return to the menu.

Control Intrastat Reporting Verification Screen (Option 3)

To display this screen, enter 3 against a timespan on the Control Intrastat Reporting Processing Screen.

This is only available if the movement data verification run fails. The screen displays the movements that caused the verification run to fail, and makes them available for maintenance. An exception report is created which details why particular movements failed the verification.

Select

1 - Select. To maintain the movement, using the EC Movement Maintenance Details Screen.

Select **F3=Exit** to leave this screen.

ESL Reporting

32/WTP

Use this option to produce ESL reports.

To produce a report, you must complete four basic steps:

- Select the country for which the report is to be produced.
- Define the timespan the report will cover.
- Verify that all data required for the ESL in the reporting country is complete.
- Print the report or submit it by EDI.

Control ESL Reporting Select Country Screen

To display this screen, select ESL (EC Reporting)

Use this screen to enter the country for the ESL Report.

Fields:

Country

Enter the country for which you want to produce the report.

The report is printed in the format used by the authorities of the selected country.

Press **Enter** to validate country code entered, and display the Control ESL Reporting Processing screen

Control ESL Reporting Processing Screen

Press **Enter** to validate country code entered,
and display the Control ESL Reporting
Processing screen

Use this screen to enter timespan dates for the report.

Export Invoice Update

41/WTP

This job incorporates the invoice details established during an invoice print in World Trade SPEX, into the relevant applications.

If export invoices and documentation have been generated in SPEX, an invoice number is assigned in SPEX, this differs to the invoice number assigned at Confirm Despatch. Individual transactions could be consolidated into one SPEX invoice line. These individual transactions each have their own invoice number from Confirm Despatch.

The batch job runs two important functions. It refreshes invoices, retrospectively updating and modifying the invoice details held within applications. Items consolidated within SPEX are assigned the common invoice number.

Then, the batch job runs the posting routines to Sales Ledger and General Ledger.

Select Export Invoice Update, then select **F8=Submit** to submit the job.

Send Intrastat/ESL Reports

51/WTP

This batch job extracts and processes all Intrastat and ESL Report data, in the Application Interface Database, into the EDI mailbox. When processed, the data is deleted from the Application Interface database.

Select Send Intrastat/ESL Reports. Then select **F8=Confirm Submit** to submit the batch job.
