Chapter 5

Application Interface

Automotive Overview

The Automotive options are conditioned by the stockroom profile settings and by the type of reporting that you choose. You can generate a report on all transactions processed by EDI messaging or on only the exceptions.

EDI message data is retrieved from the Application Interface files and once the transaction has taken place the data is deleted from the files.

When the AI Stock Update flag in the Inventory Management module is set to 0, no stock updates occur. When the flag is set to 1, Inventory will update the stock records.

Stock Movements

1/ADAI

This option allows you to generate a report on stock movement information that has been received through EDI messaging.

Receive EDI Stock Movements Screen

This screen allows you to select the type of report you want to generate.

Select Receive Stock Movements from the menu to display the Receive EDI Stock Movements screen.
