Chapter 2

Forecasting

DRP Forecasting Introduction

You can define forecasts for minor item groups and spread them down to item level using spread profiles.

You can also transfer sales forecasts into DRP from Forecasting.

You can maintain forecasts at period, weekly and daily level. You can spread forecasts from period to weekly to daily level by defining seasonal indices.

Use stock level forecasts to build stock up to a planned level according to specified target quantities and dates.

Maintain Seasonal Profiles

2/DRF

Use this function to maintain Seasonal Profiles. You can use these profiles as a template to break down sales forecasts on a time-phased basis by period, week and day. While this facility is not mandatory for forecast maintenance, it is useful if you want to take into account seasonal fluctuations.

Similarly, you can use this to define time-phased stock building and consumption planning profiles.

Maintain Seasonal Profiles Screen

Select Maintain Seasonal Profiles.

You use this screen to create and maintain seasonal profiles.

DR700	Z1 - GB Demonstration Company	USER GBJBA1MS	5/02/98 14:41:36
-------	-------------------------------	---------------	---------------------

Maintain Seasonal Profiles

Centre/DC.....?.. █

Profile code....?.. _

Year..... 98

Entry Level..... 1 1=Period 2=Weekly

Base on Profile.?.. _

F3=Exit F4=Prompt

Fields:

Centre/DC

Enter a Centre/DC which has a calendar, time-phased planning periods and stockrooms defined.

Profile Code

Enter the profile code. The profile code itself is not unique, you can use common seasonal codes across different years and different Centre/DCs.

Year

Enter the year, in YY format. You must set up the Centre/DC and year combination using Calendar Maintenance. This defaults to the current year.

Entry Level

Enter one of the following to specify how to build the seasonal profile:

1 - For a period basis up to 13 periods and weekly basis up to 53 weeks.

Note: If you have set the Period Forecast option on the company profile to 0, this option is not available.

2 - For a weekly basis.

Based On Profile

You can create a new profile using an existing profile as a template. The calendar code, year and entry level for the Based On Profile must match those for the profile you are creating.

Press **Enter** to display the Maintain Profiles Indices Screen.

Maintain Seasonal Profiles Indices Screen

To display this screen, enter the details on the Maintain Seasonal Profile Screen, and press **Enter**.

You use this screen to maintain the profile description and individual period, weekly and daily indices. The screen displayed depends on the entries you made on the previous screen.

```

```

Note: If you select Entry Level 1 on the previous screen, you do not need to enter the weekly indices.

Fields:

Profile

Enter a description of the profile.

Daily Indices

Enter the daily indices: these values cannot be negative or greater than 999. DRP breaks weekly forecasts down, based on the daily indices relative to the sum of all daily indices for the week. Day 1 is Monday. If you do not enter daily figures, DRP spreads weekly forecasts uniformly based on the working days defined in the weekly templates for the calendar.

Warning: If you enter daily indices, DRP disregards weekly templates.

Period Indices

Enter the period indices: these values cannot be negative or greater than 999. DRP breaks forecasts down by period, considering the period index relative to the sum of index values for all periods.

Weekly Indices

If you selected Entry Level 1 on the previous screen - enter the weekly indices. These values cannot be negative or greater than 999. DRP breaks period forecasts down based on the weekly indices.

If you select Entry Level 2 on the previous screen - enter the weekly indices: These values cannot be negative or greater than 999. DRP breaks annual forecasts down based on the weekly indices relative to the sum of all weekly indices for the year.

Functions:

F16

Access Period Indices. Use this function to maintain the Period Indices.

F17

Access Weekly Indices. Use this function to maintain the weekly indices within period.

F18

Display Distribution. Use this function to calculate the percentage spread for the entered indices.

Select **F8=Update** to add the new profile, or update the existing one.

Maintain Item Group Profiles

1/DRF

You use this function to define product mix percentages within sales families. DRP uses the minor item group codes specified for items in Inventory Management to identify product families. DRP treats all items with the same minor item group code as members of a family.

You use the Item Group Profile function to assign a percentage to each product in the family, reflecting its relative demand, either in quantity or value. You can then spread the overall sales forecast, or stock level targets, for each family to each item, according to these percentages.

Maintain Item Group Profile Screen 1

To display the Maintain Item Group Profile Screen 1, select Maintain Item Group Profiles.

You use this screen to select the Minor Item Group to maintain.

DR010	Z1 - GB Demonstration Company	USER GBJBA1MS	5/02/98 14:44:52
Maintain Item Group Profile			
Enter Centre/DC....?.. ■			
F3=Exit F4=Prompt			

Fields:

Centre/DC

Enter a centre or DC with periods and stockrooms defined.

Enter a centre or DC to display Maintain Item Group Profile Screen 2.

Maintain Item Group Profile Screen 2

To display this screen, enter a centre or DC on the Maintain Item Group Profile Screen 1.

You use this screen to select the Minor Item Group to maintain.

This screen displays a list of all valid minor item groups. If DRP displays a 1 alongside a group, it already has a profile defined.

DRP sources these groups from the Inventory Descriptions file (refer to the Inventory Management Product Information).

Year..... 98			
Item Group.....?.. __			
Forecast Basis..... 1 (1=Quantity 2=Value)			
Seasonal Profile..?.. __			
Maintain Intervals... _ (1=Yes)			
F3=Exit F4=Prompt			

Fields:

Centre/DC

Enter a Centre or DC with defined time phased planning periods and stockrooms and at least one valid Minor Item Group profile defined.

Year

Enter the year, in YY format. The default is the current year. You can change to a subsequent year defined to the calendar for the selected DC/centre.

Item Group

Enter a Minor Item Group with a profile set up for the centre/DC through Item Group Profile Maintenance.

Forecast Basis

Enter one of the following:

- 1 - To maintain forecasts by quantity.
- 2 - To maintain forecasts by value.

Tip: If you previously maintained the forecast using the other option, DRP issues a warning. Select **F8=Update** to proceed.

Seasonal Profile

Enter Seasonal Profile, which has a Profile, Year and Centre/DC combination previously set up through the Seasonal Profile Maintenance function. The profile you select determines at which levels you can maintain the forecast. If you set up the seasonal profile with Entry Level = 2, you can only maintain daily and weekly forecasts.

To spread product group sales forecast quantities, or values, evenly across the forecast periods, weeks and/or days, leave this field blank.

Maintain Intervals

Enter 1 to access the Maintain Intervals screen. You use this to define time bands (intervals) over which DRP spreads an input quantity or value forecasts.

To display the Maintain Item Group Forecasts Interval Screen, enter the required details and press **Enter**.

Maintain Item Group Forecasts Interval Screen

To display this screen, on the Maintain Item Group Forecasts Selection Screen, enter the required details and press **Enter**.

You use this screen to enter forecast quantities or values, by item group and centre/DC, and to define time intervals to spread this forecast over. The indices associated with the selected seasonal profile control the distribution of the forecast. If you select no profile, DRP assumes an equal distribution. The resulting forecast replaces any existing forecasts for the periods concerned. You can display the calendar structure for the DC to help specify the time bands (intervals).

Fields:

Calendar

The calendar used in the forecasting routines. This is either the code for the selected centre/DC and Year or the default Company Profile Calendar code

Total Forecast

The previously maintained total forecast quantity or value for the Minor Item Group and year.

Control Details:

Daily Forecasts To Week

The number of the last week for which the automatic forecast spread function has created daily forecasts.

Note: Interactively spreading forecasts does not

update this.

Weekly Forecast To Week

The number of the last week for which the automatic Forecast Spread function has created weekly forecasts.

Note: This does not update when you spread forecasts interactively.

Last Week Of Forecast

The number of the last week of the forecast that has a non zero quantity or value. If this is a period forecast the last week is the end week of the period.

Spread Details:

Forecast Quantity To Spread

Enter the forecast quantity or value to spread over the selected intervals. DRP breaks this down according to the seasonal profile previously selected. Leave blank, to spread the forecast evenly across the intervals.

Forecast Intervals

Enter the range for which you want to generate period, weekly and/or daily forecasts over the specified time bands (intervals). These intervals must not overlap and must be contiguous. The From and To weeks should correspond to the period start and end weeks in the calendar structure.

Functions:

F20

Display Structure. Use this function to display details for the selected Year, Calendar and Centre/DC combination showing period start and end week numbers.

Press **Enter** to display the Maintain Item Forecasts Spread Forecast Screen.

Maintain Item Group Forecasts Spread Forecast Screen

To display this screen, enter the forecast details on the Maintain Item Group Forecasts Interval Selection Screen, then press **Enter**.

You use this screen to:

- Maintain the total sales forecast quantity or value for the year.
- Maintain the time phased spread indices.
- Maintain the forecast quantities or values.
- Spread the total forecast.

- 12	10/11/97				
- 13	8/12/97				

1=Select to spread
F3=Exit F4=Prompt F8=Update F11=Delete F12=Previous F14=Barchart
F17=Apply Index F20=Update/Item Forecasts

Fields:

Period & Start Dates

There are three forecast levels: Period, Weekly and Daily.

Period records have a number in the format PP, where PP is the defined period number. The start date is the first Monday in the period.

Weekly Records have a number in the format PPWW, where PP is the period number and WW is the week number. The start date is the Monday of the week.

Daily records display a weekly period number and the actual date as the Start Date.

Index and Quantity Total

These fields are system maintained. To recalculate these figures press **Enter**.

If DRP retrieves the indices from a seasonal profile code, the total is initially 100 and DRP expresses individual forecast period indices proportionally.

DRP reconciles the quantity with the Total Forecast Quantity/Value you have already entered.

Total Forecast Quantity

The default value is the previously maintained Total Forecast Quantity or Value. Enter a new total forecast quantity. If you enter a different Total Forecast from DRP total, a warning message displays. Override this by selecting **F8=Update**.

Seasonal Profile

Enter a different seasonal profile from the one chosen on the initial screen. This is the profile used if you select a period to week, or week to day, forecast break down. You must have set up the Profile, Year and DC/Centre combination using the Seasonal Profile Maintenance Function. If this field is blank, DRP spreads the quantity or value evenly across the selected forecast periods.

Position To Period

The defaults for the start of the period list is the current period. Enter a period number to reposition the list.

Selection

Enter 1 to spread period or weekly forecasts.

DRP breaks period forecast records down to weekly forecasts; and weekly forecast records down to daily forecasts. You cannot select daily records.

Period Index

Enter the period index value used to spread forecasts. You can retrieve this from the seasonal profile. DRP uses this index to apportion the total forecast.

Period Quantity

Enter a quantity or value for the respective period, week or day.

You can generate this by interactively breaking down period, or weekly, forecasts or by applying period indices to forecast quantities or values by selecting

F17=Apply Index.

If you manually enter a value this must agree with DRP maintained total. Manual entries do not refresh period indices.

Functions:

F14

Bar chart. Use this function to display a bar chart showing the forecast quantity or value distribution by period throughout the forecast year.

F17

Apply Index. Use this function to break down the total forecast quantity or value over the forecast periods, in proportion to the period indices, compared to the sum of all period index values.

F20

Create Item Forecasts or Update Item Forecasts. Use this function to update the Item Minor Group Forecasts (as for F8=Update) and display a window, which you can use to create and maintain multiple Item Sales Forecasts.

Warning: You should apply any indices you have amended before updating with F8 or F20.

Select **F8=Update**. This updates the forecasts and indices for the selected DC/centre, year and item group. If DRP maintained total forecast quantity or value is different from the entered forecast quantity, a warning displays. You can override this and then update the entered forecast quantity/value.

Maintain Item Group Forecast Weekly Spread Window (Option 1)

To display this window, select a period record on the Maintain Item Forecasts Spread Forecast Screen.

You use this screen to break down period forecasts into weekly forecasts.

*Note: To update the records, press **Enter** without altering any of the fields.*

Maintain Item Group Forecasts Barchart Screen (F14)

To display this screen, select **F14=Barchart** on the Spread Forecast Screen.

This screen displays a graphical representation of the forecast quantity (or value) distribution throughout the forecast year by week, in weekly increments.

Fields:

Period Forecasts

DRP divides these by the number of weeks within the period. For example, a period forecast of 200 units for a 4 week period displays as 50 units per week.

Daily Forecasts

DRP accumulates these throughout the week and displays the resulting weekly total.

DRP calculates the Y axis from the maximum forecast quantity or value in the year. You can change this by entering a maximum figure in the Alter Scale field. If this field is blank the display reverts to the default.

Tip: Use the page up and page down keys to display further weeks.

Press **Enter** to exit the screen.

Enter one of the following:

- 1 - To forecast by quantity.
- 2 - To forecast by value.

If you previously maintained the forecast using the alternative forecasting basis, a warning displays; select **F8=Update** to proceed.

Seasonal Profile

Enter a Seasonal Profile. The Profile, Year and DC/Centre combination must exist. The Seasonal Profile selected on the initial screen determines at which level you can maintain forecasts. If you set it up using entry level 2, you cannot maintain period forecasts. If you enter no profile, DRP spreads item level quantity or value forecasts across the forecast periods.

Maintain Intervals

Enter 1 to access the Maintain Intervals screen. You use this to define the time bands (intervals) to spread the quantity or value forecasts over. The default is blank.

Press **Enter** to continue.

Maintain Item Sales Forecast Interval Selection Screen

To display this screen, press **Enter** on the
Maintain Item Sales Forecast Selection Screen.

You use this screen to enter forecast quantities, or values, by item and centre/DC and define time intervals over to automatically spread this forecast, using a selected seasonal profile. The resulting forecast replaces any existing forecasts for the time bands involved. You can display the calendar structure for the DC to help when specifying time bands (intervals).

Fields:

Daily Forecast To Week

The number of the last week containing daily forecasts generated using the Spread Forecast function.

Note: This does not update if you interactively maintain forecasts.

Weekly Forecast To Week

The number of the last week containing weekly forecasts generated using the Spread Forecast function.

Note: This does not update if you interactively maintain forecasts.

Last Week Of Forecast

The number of the last week of the forecast generated using the Spread Forecast function which has a non zero quantity or value. If this is a period forecast the last week is the end week of the period.

Note: If you interactively maintain a particular item forecast, the control details displayed may not represent the current status of the forecast. You should examine interactively maintained forecast details before using this function.

Spread Details:

Forecast Quantity To Spread

Enter the sales forecast quantity, or value, to be spread over the selected interval (time band). DRP breaks this figure down according to the seasonal profile selected from the initial screen. If you leave the profile code blank, DRP spreads the figure evenly across the intervals (time bands).

Forecast Intervals

Enter a range over which to generate the period, weekly and/or daily forecasts for the specified time bands (intervals). These intervals must not overlap, must be contiguous and for calculation purposes must conform to period boundaries, that is period start and end weeks defined in the DC/centre and year calendar.

If forecasts already exist for periods covered by the intervals selected, a warning displays; select **F10** to proceed. This overwrites the existing forecasts.

Functions:

F20

Display Structure. Use this function to show the calendar details for the selected DC/centre, year and calendar combination.

Press **Enter** to continue.

Maintain Item Sales Forecast Spread Forecast Screen

To display this screen, press **Enter** on the
Maintain Item Sales Forecast Interval Selection
Screen.

You use screen this to maintain the total and period forecast quantities or values and seasonal indices. You can break down the forecasts to daily, period and weekly forecasts.

1=Select to spread					
F3=Exit F4=Prompt F8=Update F11=Delete F12=Previous F14=Barchant					
F17=Apply Index F18=Display Values					

Fields:

Total Forecast Quantity/Value

Enter the total forecast value. Use **F18=Display Values** to switch the display between quantity and values; you cannot maintain the alternative display.

Seasonal Profile

Enter a seasonal profile. The default is the profile entered on the first screen. This is the profile used if you select a period to week, or week to day, forecast explosion. Leave this field blank, to spread the forecast quantity/values evenly across the selected forecast periods.

Position To Period

Enter a period number to set the initial start position for display of the period forecast. The default is the current period.

Index Total

Press **Enter** to recalculate the sum of the indices for all forecast periods.

Quantity Total

Press **Enter** to calculate the sum of the forecast quantities or values. DRP checks this against the entered total quantity or value. If it is different, a warning displays. You can override this by selecting **F8=Update** to update the entered total quantity or value.

Selection

Enter 1 to select either a period forecast to break down to weekly forecasts or a weekly forecast to break down to daily forecasts. You cannot select a daily record.

Period & Start

Period records have a number in the format PP, where PP is the period number defined in DC/Centre calendar for the year. The start date is the first Monday in the period.

Weekly records have a number in the format PPWW, where PP is the period number and WW is the week number within the year defined in the calendar. The start date is the Monday of the week.

Daily records have a weekly number and the actual date as Start Date.

Period Index

Enter the period index. DRP uses this to calculate the individual forecast period quantities or values from the entered total quantity or value.

Period Quantity

Enter the period quantity or value. You can generate this figure either by automatically spreading the total forecast down to period, weekly and/or daily level, using the Spread Forecast function, or spreading the forecasts down in stages by applying seasonal indices or directly entering values or quantities.

Functions:

F14

Barchart. Use this function to display a bar chart showing the forecast quantity or value distribution throughout the forecast year.

F17

Apply index. Use this function to spread the total forecast quantity/value over the forecast periods, according to the indices in each period, relative to the sum of the period indices.

Warning: You should apply indices before updating forecasts using F8.

F18

Display Values/Quantities. Use this function to alternate between the quantity and value displays. You cannot maintain the alternative view.

Press **Enter** to continue.

Maintain Item Sales Forecast Weekly Spread Window

To display the Weekly Spread window, select a period record on the Maintain Item Sales Forecast Spread Forecast Screen and press **Enter**.

You use this function to explode period forecasts into weekly forecasts.

To recalculate the index total press **Enter**.

Total Quantity

To recalculate the sum of all daily forecast quantities or values, press **Enter**. If the value is different to the entered total, a warning is displayed; select **F8=Update** to override and update the entered total quantity or value.

Daily Index

Enter the index. The default is from the seasonal profile. If the profile code is blank, DRP sets the indices to 1 for each working day, based on the calendar weekly template.

Daily Quantity

Enter the forecast quantity or value for each day. You can generate this by applying the daily indices to the total quantity or value.

Functions

F17

Apply Index. Use this function to spread the total quantity or value over the days in the week, based on the daily indices compared to the sum of daily indices for the week.

Press **Enter** to re-display the previous screen showing forecast details.

Sales Forecast Spread Item Forecast

6/DRF

You use this option to quickly spread sales forecasts down to period, weekly and daily levels by batch processing. This avoids having to individually spread forecasts in the forecast maintenance option.

The seasonal profile set up on the DRP item master records appears as the default profile on the item selection screen. You can use this to change to an alternative profile or leave blank, in which case DRP evenly spreads the forecasts across the intervals.

Note: DRP does not update any forecast with planning intervals that are inconsistent with the interval parameters and includes the forecast in an exception report.

Spread Item Sales Forecast Selection Screen

To display this screen, select the Spread Item Forecast option.

You use this screen to enter the selection criteria for the Spread Item Sales Forecast.

Select **F8=Submit Job** to submit the job.

Stock Forecast Maintain Item Group Forecast

1...
2... 7/DRP

You use this function to interactively maintain stock level targets at item group and centre/DC level. You can build stocks, in excess of safety stocks, to meet periods of demand when the supply rate unable to satisfy that demand.

You can express requirements in terms of quantity or value and you can specify dates during which, and by which, you must build and consume the target.

Maintain Item Group Stock Forecasts Selection Screen

Select the Maintain Item Group Forecast option.

You use this screen to select which stock level targets to maintain and on what basis, by centre/DC, year and item group.

DR710	Z1 - UK Demonstration Company	USER GBJBANB4	10/03/98 10:32:40
Maintain Item Group Stock Forecasts			
Centre/DC.....?.. 01			
Year..... 98			
Item Group.....?.. █			
Forecast Basis..... 1 (1=Quantity 2=Value)			
Seasonal Profile..?.. _			
Maintain Intervals... _ (1=Yes)			
F3=Exit F4=Prompt			

Fields:

Centre/DC

Enter a centre or DC with periods and stockrooms defined. You must also have at least one valid minor item group profile, defined through Item Group Profile Maintenance.

Year

Enter the year, in YY format. This defaults to the current year. You can change this to a subsequent year defined to the calendar for the selected DC/centre.

Item Group

Enter a minor item group with a profile set up for the centre/DC.

Forecast Basis

Enter one of the following:

- 1 - To maintain stock level targets by quantity.
- 2 - To maintain stock level targets by value.

If you previously maintained the stock level using the other option, a warning displays.

Seasonal Profile

Enter a Seasonal Profile. The profile determines at which level, period or week, you can maintain stock level targets. For example, if you set up the Seasonal Profile using Entry Level 2, you cannot maintain the period targets.

If you leave this field blank, and do not select the stock level profiling option, the stock level targets are at maximum for the initial forecasting period and reduce on a straight line basis for subsequent periods.

Maintain Intervals

Enter a 1 to access the Maintain Intervals Screen. You can then define time bands (intervals) over which to automatically maintain Stock level Targets. The default is blank.

Press **Enter** to continue.

Maintain Item Group Stock Forecasts Intervals Selection Screen

To display this screen, enter a 1 in the Maintain Intervals field on the Maintain Item Group Stock Forecasts Selection Screen and press **Enter**.

You use this screen to maintain stock level targets and define the time bands (intervals) over which you build and consume the targets, or both. The indices, associated with the selected seasonal profile, control the build and consumption of the stock levels. If you do not select a profile, DRP applies the stock target to the first period selected and reduces it, on a straight line basis, to zero by the end period. You can display the calendar structure for the DC/centre and year to assist in specifying time bands (intervals).

Fields:

Control Details:

Daily Forecasts To Week

The last week which has daily stock build requirements created by the automatic Forecast Spread function.

Note: Interactive stock level maintenance does not update this.

Weekly Forecast To Week

The last week which has weekly stock build requirements, created by the automatic Forecast Spread functions.

Note: Interactive stock level maintenance does not update this.

Last Week Of Forecast

The last week of the stock building plan which has a non zero quantity or value. If this is a period plan the last week is the end week of the period.

Spread Details:

Stock Target Over Intervals

Enter the maximum stock level target for the selected intervals. DRP assigns this according to the selected seasonal profile, in proportion to the maximum period index. If you do not select a seasonal profile, DRP sets the period indices to 100.

Forecast Intervals

Enter the intervals for the Period, weekly and/or daily stock level targets. These intervals must not overlap and must be contiguous. The start and end weeks must be period start/end weeks defined in the DC/Centre and Year calendars.

If forecasts already exist for periods within the selected intervals, a warning displays.

Functions:

F20

Display Structure. Use this function to show the details for the selected year, calendar and centre/DC combination.

Press **Enter** to continue.

Maintain Item Group Stock Forecasts Period Stock Levels Screen

To display this screen, enter details on the Maintain Item Group Stock Forecasts Intervals Selection Screen and press **Enter**.

Use this screen to maintain a stock level target, the time phased spread indices, stock level target quantities or values, for periods, weeks and days.

1=Select to spread
F3=Exit F4=Prompt F8=Create F12=Previous F14=Barchart
F17=Apply Index F20=Create/Item Forecasts F22=Stock Profile

Fields:

Stock Target Quantity

Enter the new target. The default is the previously entered stock level target.

Seasonal Profile

Enter a different seasonal profile to profile stock levels. If this field is blank, DRP assigns the target to the initial period and reduces it, on a straight line basis, to zero at the last period.

Position To Period

Enter the period number to reset the list start from the current period.

(Untitled)

Enter 1 to select a stock level target. Select a period target to spread to weekly level. Select a weekly target to spread to daily level. You cannot select a daily target.

Period & Start Dates

Numbers in format PP are period records, where PP is the period number defined in DC/Centre calendar. The start date is the first Monday in the period.

Weekly Records have a number in the format PPWW where PP is the period number and WW is the week number within the year defined in the calendar. The start date is the Monday of the week.

Daily records show the weekly number and the actual date as start date.

Period Index

Enter the period index value used to maintain period stock level targets. The default is from the database or from the seasonal profile. If you change the seasonal profile, DRP sets the maximum index to 100 and adjusts other period indices proportionally.

Period Quantity/Value

Enter a period quantity or value. DRP checks the period quantity or value against the maximum stock level target. If period forecasts exceed the maximum target, a warning displays.

You can also apportion the value by applying period indices to maximum stock level target quantities or values, or adjust the value by profiling period targets down to week targets and weeks down to days.

If applying seasonal indices, DRP calculates the period stock level from the maximum stock level target, based on the ratio of the period index to the maximum period index. If you do not select a seasonal profile, DRP sets the period indices to 100.

Functions

F14

Bar chart. Use this function to display a bar chart showing the stock build quantity (or value) distribution, by period, throughout the forecast year.

F17

Apply Index. Use this function to profile the total stock over the forecasting periods, in proportion to the period indices relative to maximum period index.

F20

Update Item Stock Level Targets. Use this function to update the item minor group stock targets and display a window showing all items within the family, so you can create and maintain item stock level targets.

F22

Stock Profile. Use this function to maintain target (maximum) stock levels (value or quantity) and dates to build and consume stocks by.

Press **Enter** to continue.

Warning: Make sure you apply indices before you select F8 or F20.

Maintain Item Group Stock Forecasts Weekly Stock Levels Window

To display this window, select a period record on the Maintain Item Group Stock Forecasts Period Stock Levels screen.

You use this function to profile period stock level targets down to weekly level.

*Note: To update the records press **Enter** without altering any of the fields.*

and quantities or values.

Maintain Item Group Stock Forecasts Barchart (F14)

To display this barchart, select **F14=Barchart** on the Maintain Item Group Stock Forecasts Period Stock Levels Screen.

This screen displays a graphical representation of the stock level target quantity (or value) distribution throughout the planning year by week.

Stock level targets display in weekly increments. The following rules apply:

- The period stock level target displays for all weeks within the period unless there are specific weekly forecasts.
- DRP calculates the Y axis default from the maximum Stock Level Target quantity or value. To reset the maximum value enter a figure in the Alter Scale field. Blank this field to revert the display to the original default.

Tip: Use the page up and page down keys to view other weeks.

Press **Enter** to return to the Spread Forecast screen.

Maintain Item Group Stock Forecasts Item Multi Selection Window (F20)

To display this window, select **F20=Create/Item Forecasts** on the Maintain Item Group Stock Forecasts Period Stock Levels Screen.

This window displays all the items within the product item group and the percentage splits for items within the item group profiles. You can select one or more items sequentially, to apply the updated time-phased stock level targets at item level.

1=Select to spread
 F3=Exit F4=Prompt F8=Update F11=Delete F12=Previous F14=BarChart
 F17=Apply Index F20=Update/Item Forecasts F22=Stock Profile

Fields:

Date Range

Enter the date range for the stock build and reduction back to the safety stock level.

Target Date

Enter the date to build the target or maximum quantity by. This must be inside the To and From date range.

Target Quantity Or Value

Enter a target/maximum quantity to build by the specified date. This should be a quantity above the safety stock level.

Example

You must build stocks from 10/10/97, to a maximum stock position of 100,000 units by 03/12/97. You must consume this stock by 18/01/98.

The date range is 10/10/97 to 18/01/97.

The target quantity is 100,000 units.

The target date is 03/12/97.

DRP generates time-phased stock level targets, building from the safety stock level, on a straight line basis from 10/10/97 to a peak of 100,000 on 03/12/97. DRP reduces the stock back down to safety stock, on a straight line basis, by 18/01/98 (assuming there is sufficient demand to consume it).

Functions:

F13

Generate Stock Targets. Use this function to generate stock targets for the items within the selected item group.

Select **F12=Previous** to abandon the transaction without updates; select **F8=Create Entry** to proceed with the creation.

Press **Enter** to generate the stock level indices and targets within the date range.

Stock Forecast Generate Item Forecast

8/DRF

You use this function to profile item group stock level targets to item stock level targets, in proportion to the percentages defined for the items within the item group profile.

This function regenerates all item stock targets for the items in the selected item groups.

Generate Item Stock Forecast Item Group Selection Screen

To display this screen, select Generate Item Forecast.

You use this screen to select by centre/DC, year and range of item groups for which item you want to generate stock level targets.

DR732	Z1 - UK Demonstration Company	USER GBJBANB4	10/03/98
Generate Item Stock Forecast		10:44:01	
Enter Centre/DC.....?... Q1			
Year..... 98			
Item Group.....?... to ...			
F3=Exit F4=Prompt			

Fields:

Centre/DC

Enter a centre or DC with periods and stockrooms defined and at least one item group profile defined for the DC/centre.

Year

Enter the year, in YY format.

Item Group Range

Enter the required minor item group range. Leave both fields blank to display all item groups for the DC/centre, which have item group forecasts assigned.

Press **Enter** to continue.

Generate Item Stock Confirm Selection Screen

To display this screen, complete the Generate Item Stock Forecast Item Group Selection Screen and press **Enter**.

You use this screen to select one or more item groups in order to generate item level stock targets. DRP recalculates the targets for all items within the selected item group, according to the percentages defined for the item in the Item Group Profile.

DR732	Z1 - UK Demonstration Company	USER GBJBANB4	10/03/98 10:44:22
Generate Item Stock Forecast			
Centre/DC..... C1 AS		Year	Calendar C1
WARNING - This Program will recalculate all Items Forecasts within the selected Item Groups.....			
Sel	Item Group	Description	
☒	10	Alcohol	
☐	3	Sun Protection	
 _1=Select F3=Exit F8=Submit job F12=Previous			

Fields:

Selection

Enter 1 to select an item group for processing.

This converts an Item Group Stock Level Target from a value target to a quantity target. DRP divides the value target by the base list price to obtain the quantity requirement.

Select **F8=Submit Job** to submit the job. This recalculates stock level targets for all items within selected Item Group(s).

Stock Forecast Maintain Item Forecast

9/DRF

You use this function to create and maintain, by item and DC/Centre, stock level targets. DRP generates these targets by:

- Profiling Item Group Stock Level Targets using previously described functions within DRP.
- Direct entry through this function without prior set up of Item Group Profiles.

Maintain Item Stock Forecast Selection Screen

To display this screen, select Maintain Item Forecast (Stock).

You use this screen to select the Item for which you want to create or maintain Stock Level Targets.

Year..... 98

Item.....?.. _____

Forecast Basis..... 1 (1=Quantity 2=Value)

Seasonal Profile..?.. _

Maintain Intervals... _ (1=Yes)

F3=Exit F4=Prompt

Fields:

DC/Centre

Enter a centre or DC with periods and stockrooms defined.

Year

Enter the year, in YY format. You can change to a subsequent year defined to the calendar for the DC or centre item.

Item

Enter an item defined in DRP for the centre/DC.

Forecast Basis

Enter one of the following:

- 1 - To generate stock building schedules by quantity.
- 2 - To generate stock building schedules by value.

If the forecasting basis is different to that previously used, DRP issues a warning with an option to proceed.

Season Profile

Enter a Seasonal Profile. The Seasonal Profile selected on the initial screen determines at which level stock level you can maintain targets. If you set up the Seasonal Profile using Entry Level 2, you cannot maintain period targets.

Maintain Intervals

Enter 1 to access the Maintain Intervals screen. You use this screen to define time bands (intervals) used to automatically maintain quantity or value stock level targets. The default is blank.

Press **Enter** to continue.

Maintain Item Stock Forecast Intervals Selection Screen

To display this screen, complete the Maintain Item Stock Forecasts Selection Screen and press **Enter**.

You use this screen to maintain stock level targets by item and centre/DC, and define the time bands (intervals) to build and/or consume them. The indices associated with the selected seasonal profile control the build and consumption of the stock levels. You can display the calendar structure for the DC and year to assist in specifying time bands (intervals).

Daily Forecasts from Week ___ to Week ___

Weekly Forecasts from Week ___ to Week ___

Period Forecasts from Week ___ to Week ___

F3=Exit F12=Previous F20=Display Structure

Fields:

Control Details:

Daily Forecasts To Week

The last week containing daily stock building requirements generated by the Spread Forecast function.

Note: Interactive stock level maintenance does not update this.

Weekly Forecast To Week

The last week for which the spread forecast function has created weekly stock building requirements.

Note: Interactive stock level maintenance does not update this.

Last Week Of Forecast

The last week of the stock building schedule which has a non zero quantity or value. If this is a period schedule the last week is the end week of the period.

Spread Details:

Stock Target Over Intervals

Enter the maximum stock level target for the selected intervals. DRP assigns this in proportion to period index, relative to the maximum period index. DRP retrieves the indices from the database or the selected seasonal profile. If you select no profile or retrieve no indices from the database, DRP sets the period indices to 100.

Forecast Intervals

Enter the intervals for the period, weekly and/or daily stock level targets. These intervals must not overlap and must be contiguous. The start and end weeks for intervals must be period start/end weeks defined in the DC/centre and year calendars.

If forecasts already exist for periods within the selected intervals, a warning is displayed; select **F10** to proceed.

Functions:

F20

Display Structure. Use this function to show details for the selected Year, Calendar and Centre/DC combination.

Press **Enter** to continue.

Maintain Item Stock Forecast Period Targets Screen

To display this screen, complete the Maintain Item Stock Forecast Intervals Selection Screen and press **Enter**.

You use this screen to maintain maximum and period stock level targets and seasonal indices. You can profile, by stages, period stock level targets to daily and weekly targets, using different seasonal profiles for each stage.

1=Select to spread			
F3=Exit F4=Prompt F8=Create F12=Previous F14=Barchart			
F17=Apply Index F18=Display Values F22=Stock Profile			

Fields:

Percentage Of Group

The percentage stock level requirement for this item, within the item group profile. This does not display if you created the stock build using this function and not included the item in the item group profile.

Stock Target

Enter the Stock Level Target quantity or value.

*Note: You can use **F18=Display Values / Quantities** to switch between quantity and values; however you cannot maintain the alternative display. You base conversion on item/stockroom base sales price.*

Seasonal Profile

Enter a different Seasonal Profile from that chosen on the first screen. This is the profile used if you select period to week or week to day stock level profiling.

Position To Period

Enter a period number to set the initial start position for display of period forecast. The default is the current period.

(Untitled)

Enter 1 to select a period schedule to break down to weekly level or a weekly schedule to break down to daily level. You cannot select a daily record.

Period & Start Dates

Period records have a number in format PP, where PP is the period number defined in DC or Centre calendar for the year. The start date is the first Monday in the period.

Weekly records have a number in the format PPWW, where PP is the period number and WW is the week number within the year defined in the calendar. The start date is the Monday of the week.

Daily records have the weekly number and the actual date as Start Date.

Index

Enter the period index. DRP can retrieve this from the database or the Seasonal Profile. DRP uses this to calculate the individual period stock level target quantity, or value, from the maximum target quantity/value in proportion to maximum period index.

Quantity

Enter the quantity or value for each forecasting period. You can generate this figure by applying seasonal indices.

Functions:

F14

Bar chart. Use this function to display a bar chart showing the stock build quantity or value distribution throughout the forecast year.

F17

Apply index. Use this function to profile the entered stock level target over the planning periods, according to the indices in each period relative to maximum period index.

F18

Display Values/Quantities. Use this function to alternate between the quantity and value displays. If you originally selected quantity, you cannot maintain the value. It is not possible to change the indices or values or stock level targets.

F22

Stock Profile: Use this function to maintain target stock levels and dates to build and consume stocks by.

Press **Enter** to continue.

Maintain Item Stock Forecasts Weekly Spread Window

To display this window, on the Maintain Item Stock Forecast Period Targets Screen, select a period record.

You use this function to profile period stock level targets to weekly level.

*Note: To display the weekly records, press **Enter** without altering any fields.*
