Chapter 3

Inventory Processing

Post Inventory Issues

1... **1/JCF**
2...

Daily batch processes include:

- Posting of timesheets to Job Management
- Posting of Inventory costs to Job Management

The direct posting interface is a batch process when posting costs (i.e. a sales order) through to Job Management.

Direct Posting Interface Batch Submit Screen

Take the Post Inventory Issues option to see the Direct Posting Interface Batch Submit Screen.

JM185	Z1 Amalgamated Amalgamations PLC	USER GBJBANB1	9/05/96 15:14:28
Direct Posting Interface - Batch Submit			
Inventory costs will be posted for the following transaction:-			
Customer issues..... 1 (0/1)			
Miscellaneous issues... 1 (0/1)			
F3=Exit F8=Submit			
08-26	SP	MK	KS IM II KENB20A PET149S2

Fields:

Customer Issues

1 - Post customer transactions.

This field will appear only if the Post Customer Issues Direct field is set to 0 on the company profile.

Miscellaneous Issues

1 - Post miscellaneous transactions.

This field will appear only if the Post Miscellaneous Issues Direct field is set to 0 on the company profile.

Invoicing/Asset Generation Options

Invoicing/Asset Generation Processing

1... **2/JCF**

Usually you know, when you attach a parts list to a job, whether those parts are to be revenue items or capital items.

But suppose you have a job with a parts list which contains an item which could be revenue or capital - depending on whether the customer decides to buy it or lease it, for example.

In such a case you should set up a job with a transfer method of 8, enter your parts list in the normal way, and, when it is time to post to the General Ledger, use this option to select some items for posting to P&L, and some for posting to Fixed Assets.

Tip: This option can only be used by job details with a transfer method of 8. This must be fixed price, and cannot have stage payments.

Each job detail for which a parts list exists can have invoices generated at this level or rolled up to a higher level. This gives you full control over how many invoices should be generated from one job, and which job details will be included in each invoice.

Invoicing/Asset Generation Screen

Select the Invoicing/Asset Generation option to display the Invoicing/Asset Generation Screen.

```
JM343                Z1 - GB Demonstration Company    USER GBJBABL    23/06/97
                                      15:35:52

F3=Exit  F4=Prompt
05-23    [Icon]    MW    KS    IM    II    KENB20A    PET178S2
```

Fields:

Job/Sub-job/Task

Enter the appropriate job detail. This must have a transfer method of 8. If the job type specifies that the job detail is to be invoiced on closure, then any job detail must already be closed before you take this option.

Any level of job detail can be entered as long as it is not defined as rolling up to a higher level.

If you enter a job detail, you cannot enter a customer.

Customer

Enter the appropriate customer. If the customer is part of a hierarchy it must be at level 0.

If you enter a customer, you cannot enter a job detail.

Press **Enter**. If you entered a job detail you will now go to the Outstanding Despatches Screen. If you entered a customer, you will see the Jobs for a Customer Outstanding Screen.

Outstanding Despatches Screen

Enter a job detail on the Invoicing/Asset Generation Screen and press **Enter** to see the Outstanding Despatches Screen.

This screen is also available from the Service Management Details Screen using the **F13=Summary** function.

This screen is also available from the History Screen using the **F14=Outstanding** function.

This screen lists all despatches for the selected job detail which have been confirmed in Sales Order Processing, but have not yet been invoiced or capitalised. If you selected a higher level job detail, then all despatches for related sub-jobs and tasks will also be listed.

If the job type specifies that invoicing will take place on the closure of the job, then only closed jobs are displayed here.

The screen displays one line per order line.

11-02	SP	MW	KS IM II KENB20A PET178S2

Fields:

Sell Total

This field displays the total of all selling prices from SOP parts lists.

Cost Total

This field displays the total of all cost prices from SOP parts lists. This is the equivalent of total Inventory commitments plus actual Job Management costs.

Cost Released

This field displays total costs which have either been invoiced (as related selling prices) or capitalised.

Qty Inst

Quantity installed. This field displays the number of completed Service Management installation jobs.

(Untitled)

Selection field. This field will be pre-filled with '2' against any line for which asset details already exist. In this way asset details can be collected over a period of time.

You can enter the following options:

- 1 - To go into Sales Order Processing's Whole Order Enquiry option. This in turn leads to Configurator options, if relevant. For more details, see the Sales Order Processing product information.
- 2 - To create the selected item as a fixed asset.
- 3 - To create a Sales Order Processing invoice for the selected item. For more details, see the Sales Order Processing product information.
- 4 - To enter an override address for the selected item. This override will apply to this order line only.

Functions:

F13

Service Detail. This function is available only if the Service Active field is set on the first Company Profile Update Screen.

This takes you to the Service Management Details Screen, which displays information in very much the same format as the Outstanding Despatches Screen, but for each despatch line there is a list of details relating to each individual serial number, where the items are serial controlled.

F14

History. This function key displays the History Screen.

F17

Override Address. This enables you to change the invoice address. This override will permanently update the job detail you entered on the first screen (the Invoicing/Asset Generation Screen).

This function key is highlighted if an override address already exists.

Asset Details Entry Screen (Option 2)

 Enter '2' against a despatch on the Outstanding Despatches Screen to see the Asset Details Entry Screen.

This screen enables you to enter the data necessary for the capitalisation of costs.

The screen shows each item individually, with separate entries for individual serial controlled items. Note that each entry is on two lines. On the top line are the sub-job, task, despatch note number, line, item and description. On the second line are the serial number, and entry fields for the asset number, model number, asset group, reason code and capitalisation date and period.

If a serial number is highlighted, that means that it already exists in Fixed Assets.

```

11-22    SF      MK      KS      IM      II  KENB20A  PET178S2

```

Fields:

Asset No

Enter the asset number to be used when this item is capitalised. If the serial number is already present, then the asset number will default to the existing one. If not, the number will default in from the job detail.

Model No

Enter the model number to be used when this item is capitalised. If Service Management is installed, the model number will default in, taking the first matching model number from the known item number.

Asset Grp

Enter the relevant asset group. This will default in from the job detail, where appropriate.

Rsn

Enter a Fixed Assets reason. This will default from the job detail, where appropriate.

Capitalisation Date-or-Perd

You must enter either a capitalisation date or a capitalisation period, and the system will use the one you enter to calculate the other. The period defaults to the next Fixed Assets period. Depreciation will start from the same date.

Functions:

F8

Release to Transfer. This submits a batch job to transfer the item(s) to Fixed Assets. There is no need to use the Release Automatic Transfers option, but you will have to use the Confirm Transfer option.

If you need to use the Restart Transfer option, you will have to repeat the asset transfers using this option.

F10

Save & Return. This function key enables you to enter certain asset details, and then to save them without releasing the items for transfer.

Invoice Summary Screen (Option 3)

Enter '3' against a despatch on the Outstanding Despatches Screen to see the Invoice Summary Screen.

This screen enables you to generate SOP invoices for selected lines. It also gives options to override payment terms and SOP charges.

This screen displays one line for each invoice to be generated. The invoices will be rolled up according to the roll up rules for the job detail. If lower level details have rolled up invoices, this line contains those rolled up values.

```

Fields:

Customer Invoice Reference

Enter the reference to be printed on the invoice as the customer reference.

(Untitled)

You can enter the following options:

- 1 - This brings up the Sales Order Processing Payment Terms Window, to enable you to override the default payment terms, which are taken from the customer. For more details, see the Sales Order Processing product information.
- 2 - This brings up the Enter Invoice Charges Window, which enables you to display and amend invoice charges.

Functions

F8

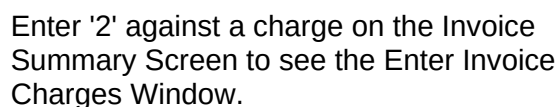

Generate Invoices. All invoices are generated. This includes updating or creating World Trade transactions, and may also involve recalculating VAT using the rules

held in SOP. After the invoices have been generated, their numbers are displayed in a window.

The invoices produced are equivalent to standard SOP miscellaneous invoices, with stock update, so you can post the details to the General Ledger, Sales Analysis, Forecasting, World Trade and SPEX using the standard SOP options.

F22

Prime. This redisplay all values in prime currency instead of base.

Invoicing/Asset Generation Enquiry

22/JCF

This option is a display-only version of the Invoicing/Asset Generation option.

Usually you know, when you attach a parts list to a job, whether those parts are to be revenue items or capital items.

But suppose you have a job with a parts list which contains an item which could be revenue or capital - depending on whether the customer decides to buy it or lease it, for example.

In such a case you should set up a job with a transfer method of '8', enter your parts list in the normal way, and, when it's time to post to the General Ledger, select some items for posting to P&L, and some for posting to Fixed Assets. This option enables you to enquire on such jobs.

Tip: This option can only be used by job details with a transfer method of '8'. This must be fixed price, and cannot have stage payments.

Invoicing/Asset Enquiry Screen

Select Invoicing/Asset Generation from the enquiries to display the Invoicing/Asset Enquiry Screen.

```

Enter the appropriate customer. If the customer is part of a hierarchy it must be at level 0.

If you enter a customer, you cannot enter a job detail.

Press **Enter**. If you entered a job detail you will now go to the Outstanding Despatches Screen. If you entered a customer, you will see the Jobs for a Customer Outstanding Screen.

Outstanding Despatches Screen

Enter a job detail on the Invoicing/Asset Enquiry Screen and press **Enter** to see the Outstanding Despatches Screen.

This screen is also available from the Service Management Details Screen using the **F13=Summary** function.

This screen is also available from the History Screen using the **F14=Outstanding** function.

This screen lists all despatches for the selected job detail which have been confirmed in Sales Order Processing, but have not yet been invoiced or capitalised. If you selected a higher level job detail, then all despatches for related sub-jobs and tasks will also be listed.

If the job type specifies that invoicing will take place on the closure of the job, then only closed jobs are displayed here.

The screen displays one line per order line.

Fields:

Sell. Total

This field displays the total of all selling prices from SOP parts lists.

Cost Total

This field displays the total of all cost prices from SOP parts lists. This is the equivalent of total Inventory commitments plus actual Job Management costs.

Cost Released

This field displays total costs which have either been invoiced (as related selling prices) or capitalised.

Qty Inst

Quantity installed. This field displays the number of completed Service Management installation jobs.

(Untitled)

Selection field. This field will be pre-filled with '2' against any line for which asset details already exist. In this way asset details can be collected over a period of time.

You can enter the following options:

- 1 - To go into Sales Order Processing's Whole Order Enquiry option. This in turn leads to Configurator options, if relevant. For more details, see the Sales Order Processing product information.
- 2 - To create the selected item as a fixed asset.

Functions:

F13

Service Detail. This function is available only if the Service Active field is set on the first Company Profile Update Screen.

This takes you to the Service Management Details Screen, which displays information in very much the same format as the Outstanding Despatches Screen, but for each despatch line there is a list of details relating to each individual serial number, where the items are serial controlled.

F14

History. This function key displays the History Screen.

Asset Details Screen (Option 2)

Enter '2' against a despatch on the Outstanding Despatches Screen to see the Asset Details Screen.

This screen shows each individual serial number despatched. Note that each entry is on two lines. On the top line are the sub-job, task, despatch note number, line, item and description. On the second line are the serial number, and entry fields for the asset number, model number, asset group, reason code and capitalisation date and period.

If a serial number is highlighted, that means that it already exists in Fixed Assets.

Fields:

Asset No

This displays the asset number to be used when this item is capitalised.

Model No

This displays the model number to be used when this item is capitalised. If Service Management is installed, the model number will default in, taking the first matching model number from the known item number.

Asset Grp

This displays the relevant asset group. This will default in from the job detail, where appropriate.

Rsn

This displays the Fixed Assets reason. This will default from the job detail, where appropriate.

Capitalisation Date-or-Perd

This displays the capitalisation date and period. Depreciation will start from the same date.

Service Management Details Screen (F13)

Select **F13=Service Detail** on the Outstanding Despatches Screen to see the Service Management Details Screen.

This screen shows the Service Management related information for items and serial items - for example, the quantity installed, the installation date, and so on. It displays information in very much the same format as the Outstanding Despatches Screen, but for each despatch line there is a list of details relating to each individual serial number, where the items are serial controlled.

Picking Notes

11/JCF

This option prints picking notes for Job Management-related parts lists. You can print pick notes for all details for

- a job.
- a sub-job.
- a task.

A separate system job is submitted for each pick note to be produced.

If you wish, you can still use the standard SOP pick note option, but you will need to know which sales order number to choose.

Produce Pick Notes Screen

Take the Picking Notes option to see the Produce Pick Notes Screen.

Fields:

Job/Sub-Job/Task

Enter the job detail for which you wish to produce pick notes. This can be a job, sub-job or task.

Pick All Levels

0 - Produce the pick notes for the specified job detail only.

1 - Produce the pick notes for the specified job detail and all details at lower levels.

Job details that have no sales orders associated with them will be ignored.

Confirm Despatch

You can confirm the despatching of parts in a parts list by using the confirmation of despatch option within SOP.

The manner in which a job detail sales order is processed within the despatch confirmation process depends on the setting of the SOP invoice flag on the parts list confirmation window (via **F15** from Job Details).

SOP Invoice Flag - 0

The sales invoice information generated for a normal sales order is not generated for this option. The inventory costs of the despatched items are written to Job Management, initially as a commitment.

The timing of when those costs are posted depends on the setting of the Post Cust Issues Direct field on the Job Management company profile. If it is 0, then you must take the Post Inventory Issues option within Job Management. If it is 1, then the posting process is done immediately and automatically. To assist in AFI posting, Job Management related inventory movements are written with a movement reason of JM.

Note: If the order is partially despatched and the 'PDS' process code is active, the status code of the job detail will be changed to that associated with the 'PDS' code. A totally despatched order and the 'TDS' process code will work similarly, which means the parts list is closed. If extra items are required, create another task for the sub-job and a new parts list for it.

SOP Invoice Flag - 1

The sales order is treated in the same way as a normal SOP order, including invoicing. Use of this method gives visibility of orders associated with a job but without capturing costs within Job Management.

Note: The postings to the relevant accounts will take place in batch, via the Direct Postings option

Note: If the order is partially despatched and the 'PDS' process code is active, the status code of the job detail will be changed to that associated with the 'PDS' code. A totally despatched order and the 'TDS' process code will work similarly.

Select **F8=Submit** to submit the job.

Parts List Enquiry

21/JCF

If you have SOP active, you can enquire on the status of Inventory items associated with a job and look at the stock availability against individual items.

Job Parts List Enquiry Selection Screen 1

Take the Parts List Enquiry option to see the Job Parts List Enquiry Selection Screen 1.

Fields:

Job

Enter the job header you want to enquire on.

Press **Enter** to see the Job Parts List Enquiry Selection Screen 2.

Job Parts List Enquiry Selection Screen 2

When you have selected the job header and pressed **Enter**, the Job Parts List Screen 1 for all sales orders set up is displayed.

Job Parts List Enquiry Screen 1

When you have selected the parts list you see the first Job Parts List Enquiry Screen.

The indented list of sub-jobs for the job chosen is shown. The first line of the list represents the job header and is displayed as '** Job Header'.
