Chapter 7

Income Processing

Invoicing

Every job, sub-job and task has a price type - fixed price, time and material or non-chargeable. No invoices can be generated for jobs that are defined as non-chargeable.

Invoices can be generated and printed for fixed price and time and material jobs. Fixed priced jobs have invoices generated via:

- The Sundry Invoices/Credit Notes facility.
- Date-driven stage payments.
- Activity-driven stage payments.

Time and material transactions generate invoices depending on mark-up percentages.

All invoices can be set up so that they can be reviewed and adjusted before printing, but this review procedure can be bypassed.

Updating to Accounts Receivable and General Ledger

At the time of printing the invoice(s), the system will generate an invoice/credit note number and pass data to the Accounts Receivable and General Ledger.

At the time of GL update, the system will post income to either deferred income accounts or directly to P&L accounts. This posting depends on the flag for deferred income (1/0) in the job type.

The actual invoicing information is now passed back to Job Management as follows.

Automatic Invoices (not Reviewed)

The invoice data - amount, currency, invoice number etc.- is recorded in the originating transaction and in the job invoices file.

Automatic Invoices (Reviewed)

Data is recorded in the transaction and job invoices files as for the 'Not Reviewed' invoicing. In addition, the stage payment record is changed so that the amount actually invoiced is flagged as being overridden for fixed price jobs

For T&M jobs, the recharge amount is changed to the amount that is actually invoiced and will be flagged as overridden.

Sundry invoices and credit notes write records in the job invoices file. Sundry invoice and credit note details can be viewed in the stage payments details with a line number, date, value, VAT code and invoice number.

To Produce an Invoice

- Create or copy a sub-job with a price type of 'fixed'.
- Create a stage payment for today's date.
- Generate Automatic Invoices option.
- Review Invoices option.

- Print Invoices option.

Chargeable Transaction Review

1/JCB

Transactions whose charge field is set to 2 (review) are reviewed within this option.

You can review these transactions to ensure that mark-up values are correctly applied before invoicing. You can amend the charge value if necessary, or you may decide not to recharge a particular transaction at all. You cannot review the cost of the transaction to the job - this is because the cost has already been posted. On completion of this process invoices are ready to be produced.

Chargeable transactions are defined for each job/sub-job/task at the job detail. Once a transaction has been entered, a batch is submitted to update the costs. If you want to review the income value of the transaction before generating the invoice, then set the relevant charge field to 2 (review).

Job Details

Some job detail fields affect invoicing:

- Price type and charge time/material fields.
 - You can charge on a cost plus basis for transactions with time and material price types. You also have to set the charge time field on for timesheets, and the charge material field for non-timesheet transactions.
- Expense types.
 - Each job detail can have a number of expense types associated with it, held on the job type for that job. The invoice value to be calculated will depend on the mark-up percentage on these expense types for a given job type. The Direct Transactions option enables you to override this mark-up value.

Chargeable Transaction Review Selection Screen

Take the Chargeable Transaction Review option to see the Chargeable Transaction Review Selection Screen.

F3=Exit F8=Confirm accept charges F12=Previous F13=Reset non-charge jobs			
F16=Set all to 1 F19=Set all to 9 F22=Set all to blanks			

Fields:

(Unnamed)

Selection field.

1 - Display Detail.

If uncertain of the transaction review line or not satisfied with the charge value, enter 1 to review the charge value of this transaction. Option 1 enables you to override the charge amount shown here.

8 - Cancel Calculated Value.

This resets the status of the transaction to 2 (review).

9 - Accept Calculated Value

This accepts the value to be charged on this line. The system assumes that you have reviewed and accepted the charge value, and the transaction status is changed to 4. The calculated charge is calculated as follows:

- The appropriate Charge Time/Material field must be set to 1 or 2.

- The cost value of the transaction must not be negative.
- The cost currency must equal the income currency of the job detail.

Src

The transaction source for this transaction. If the transaction has come from within Job Management you may have set the transaction source as JM.

Reference

This is the internal reference number for the transaction. If you have set the Auto Generate JM Ref Nos field to 1 in the company profile then this number is generated automatically.

Cst

The cost value of the transaction in the base currency (not the cost currency, although they could be the same).

Calculated Charge

The charge amount to be reviewed in the income currency of the job number as set in the job details header.

Curr

This column displays the income currency of the job number.

Untitled

Transaction status. This column displays the status of the transaction as one of the following:

2 - This transaction needs reviewing.

3 - This transaction's Recharge field has been set to 0, for no recharge, but you can override this by amending the transaction's details.

4 - This transaction's Recharge field has been set to 1, to recharge, but you can override this by amending the transaction's details.

Transactions with a status of 3 or 4 are highlighted.

Functions:**F8**

Confirm Accept Charges. This converts transactions with a status of 4 to status 1 (charge), and transactions with a status of 3 to status 0 (do not charge), and updates.

This means that you can set the Recharge field of each transaction without updating straight away. You can even leave the option, return, check your entries, and then update using this function key.

F13

Reset Non-Charge Jobs. If you have reset the job detail's Materials field to 0, then use this function to reset the chargeable jobs as non-chargeable, deleting the affected transactions from further review.

F16

Set All To 1. This sets all option fields to 1, for displaying detail. On pressing **Enter** the system will take you through each transaction review in sequence.

F19

Set All To 9. This sets all option fields to 9, for accept. All transactions will be accepted with the current recharge value.

Warning: F19=Set All To 9 means that no data on this screen can be reviewed further.

F22

Set All To Blanks. This sets all option fields to blank.

If you wish to review and amend the chargeable amount or flag, enter 1 to see the second Chargeable Transaction Review Screen.

Chargeable Transaction Review Screen 2 (Option 1)

Enter 1 against a transaction on the Chargeable Transaction Review Screen 1 to see this screen.

This screen enables you to review the cost details of the chargeable transaction and determine whether you wish to recharge the customer and if so at what amount/mark-up.

Re-charge.....	2 (0/1/2)		
Mark up %.....			
Charge amount...	130.00		
F3=Exit F12=Previous			

Fields:

Re-Charge

Recharge is only allowed for T & M jobs.

0 - Do not recharge. When you return to the Chargeable Transaction Review Screen 1, this transaction will have 3 in the status field on the right hand side.

1 - Recharge. If the transaction type is that defined for the timesheets in the company profile then the Chg Time field must be set to 1 on the Job Details Maintenance Screen 2. If the transaction type is not that defined for timesheets then the Chg Mat field must be set to 1 on the Job Details Maintenance Screen 2. This includes the transaction type for expenses. When you return to the Chargeable Transaction Review Screen 1, this transaction will have 4 in the status field on the right hand side.

2 - This transaction still needs reviewing. If you wish to review the transaction again then leave this field as 2. Otherwise, set to 0 or 1. The Chargeable Transaction Review option only accepts alterations to the amount charged. Once the batch has been completed no further amendments can be made to the cost of the transaction.

All chargeable transactions set for review have a default flag of 2 until otherwise set to 1 or 0.

Mark Up %

The system automatically defaults to the mark-up percentage of the expense type as set up in job type. This percentage can be overridden in this field for this transaction. The mark-up is applied to the cost and used to recharge the customer. It only applies to T&M jobs and when the recharge field is set to 1.

Warning: If cost currency differs from the income currency, then enter a charge value. The mark-up percentage for that expense type is not used.

Charge Amount

Optionally enter an amount to be recharged to the customer.

Example With Multi-Currency Transaction

Six transactions were put through either as a direct transaction or an employee expense transaction.

The base currency has been set to USD (United States dollars). The job detail income currency for A, B and C is in DM (Deutschmarks) and for D, E and F in USD.

Each transaction has been as a cost of 55 with the cost currencies differing. The currency rates are:

1 USD=2.055 DM

1 USD=7 FRF (French francs)

The rechargeable value has been set at blank with a chargeable review flag of R and mark-up percentage of 50% for the expense type.

Job no.	Source	Reference	Cost value (base currency)	Charge value	Income currency	Cost currency
A	JM	010	55.00	.00	DM	USD
B	JM	011	26.75	82.50	DM	DM
C	JM	012	7.86	.00	DM	FRF
D	JM	012	20.00	30.00	USD	USD
E	JM	014	26.75	.00	USD	DM
F	JM	015	7.86	.00	USD	FRF

You can see that unless the income currency is the same as the cost currency, then the application will only accept a charge value in the charge amount field. This charge amount can be input on any of the following:

- Employee expense entry screen.
- Direct transaction.
- Chargeable transactions (view details) screen.

Only job B calculates the charge value. The cost has been converted from Deutschmarks into the cost currency, dollars, and the mark-up of 55 DM * 1.5=82.50.

Stage Payments

2/JCB

This option is concerned with fixed price jobs (all job details are classified as fixed price, time & material or non-chargeable), where payments are made at fixed periods, e.g. at end of each month. It is also suitable for jobs which make no automatic charge for time and materials.

Stage payments are automatically generated from fixed price jobs. Subject to your review flag of invoices, an invoice is generated whenever the date of a stage payment is reached or passed, or whenever all linked activities are completed, once the Generate Automatic Invoices option has been submitted.

Note: If one of several activities is not complete, no activity at all is invoiced.

In effect all payments for fixed price jobs go through the stage payments process. However, it is possible to enter payment to a fixed price job as a sundry invoice and/or credit note. Once this transaction is posted in the invoice processing, it classifies itself as a stage payment and a payment number and invoice number with date of invoice appears. In fact, credit notes for fixed price jobs can only be entered through the direct transaction process or through the Sundry Invoices/Credit Notes option.

Note: Review flags are defined at both job type and job detail level.

Tip: The stage payment maintenance can also be accessed via **F13=Stage Payments** on the second Job Details Maintenance Screen.

Multiple line entry of stage payments is allowed, more lines can be entered by using the page up and page down keys.

Take the Stage Payments option to see the Stage Payments Selection Screen.

Stage Payments Maintenance Selection Screen

F3=Exit F4=Prompt F12=Previous F17=Address Override					

Fields:

Select

4 - Delete a stage payment which has already been entered but has not yet been submitted to invoice.

6 - Enter additional external text to appear on invoices. The text normally defaults to the job/sub-job/task description.

7 - Display the linked activities screen, as found in Job Detail Activities.

Paymnt Number

If a stage payment has been generated a payment number is displayed.

Date

Enter the date the stage payment is required to be invoiced. This field cannot be used if an activity code is entered for the payment, as activities have their own dates defined.

Stage Value

Enter the value of the stage payment.

VAT

Enter a VAT code already set up in your General Ledger. If the customer's VAT indicator is set to '3' then this code is used, if it is set to '2' then it is ignored, and the VAT code from the customer master file is used.

Activity Code

If you wish to record an activity code against the stage payment, then enter the relevant activity code here. The use of activity codes is optional. An activity code cannot be entered if a date is entered.

Unless all activities are complete, no invoice will be produced.

Activity codes are set up using the Activity Codes option.

Inv No

If a stage payment has been invoiced, a payment number and invoice number are displayed. The invoice may be in review and a prompt to that effect is displayed in this column, i.e. 'In Revw'.

Ret %

(Retention percentage). This field is for memo purposes only.

Functions:

F17

Address Override. This displays the delivery and invoice addresses of the customer specified on the job detail, and enables you to change these addresses. If the job detail has a parts list, then Sales Order Processing will also be updated with any new address. Once a job detail has an override address, the **F17=Address Override** is highlighted.

Invoice/Delivery Address Maintenance Screen (F17)

When you select **F17=Address Override** on the Stage Payments Maintenance Screen, the Invoice/Delivery Address Maintenance Screen is displayed.

Fields:

Invoice Name and Address

Enter the invoice name and address in the fields provided, in the format in which you want them printed. The details will be picked up by Sales Order Processing, where appropriate. These overrides will be taken into account during the consolidation process when generating invoices.

Delivery Name and Address

Enter the delivery name and address in the fields provided, in the format in which you want them printed. The details will be picked up by Sales Order Processing, where appropriate. These overrides will be taken into account during the consolidation process when generating invoices.

Press **Enter** to update.

Generate Automatic Invoices

3/JCB

Take Generate Automatic Invoices to produce the following reports:

- Invoices-in-error report.
- The generated-invoices-needing-review report, by project manager and by batch number.
- Job Management generated invoices report.
- The invoices detailed here include all invoices including those awaiting review. These may be distinguished by the review flag as 1 on the report itself. Exclude all those invoices awaiting review.
- Accounts Receivable posting report.
- General Ledger posting report.
- Invoices/credit notes.

Once you have reviewed the invoices and passed them for printing, you can do either of the following:

- Run Generate Automatic Invoices again to print the invoices.
- Run Print Invoices/Credit Notes.

This option requires no parameters.

The following list defines the combinations which cause the creation of different invoices and batches of invoices:

Batch

For each combination of:

- Price type,
- Review flag,
- Project manager (if review flag is 1).

Invoice

For each combination of:

- Batch number,
- Customer,
- Delivery address sequence,
- Job type,
- Job number (not sub-job or task),
- Income currency,
- Review flag.

Review Invoices

4/JCB

This option is used to review invoices generated by Job Management for jobs that have been defined as requiring review. No invoice will be printed, or account updated, for a document needing review.

A job detail can be flagged for review via the job detail maintenance screen.

Once the Generate Automatic Invoice option has been taken, all invoices that are to be reviewed will be flagged and no posting occurs. Review Invoices has a selection screen so that you review the invoices by project manager.

Take Review Invoices, and enter a project manager and associated batch number (**F4** lists batches needing review along with their associated project managers).

When the batch number is entered the rest of the batch details are displayed, and are all maintainable except for the document type.

Press **Enter** to see the Review of Batch Screen.

Review of Batch Screen

JM142		Z1 Amalgamated Amalgamations PLC		USER GBJBANB1	10/05/96
					10:51:55
Review of batch... 1000014		Batch total...		1000.00	Items... 1
Item	Name	Job Number	Base Value		
J003307		ACTIVI	1000.00

06-02	SP	MK	KS	IM	II KENB20A PET149S2

Fields:

Option

If any invoices are awaiting review, three options are available against each line.

5 - sets the review to OK. All lines that have been authorised have an R to the right of the row details.

7 - cancels the authorised review entered against a line. The review flag R disappears from the screen.

8 - Amend items. All items are listed for amendment.

Functions:

F21

If pressed, 5s are automatically placed against each document as a 'review all' function. You can then remove the 5 for those invoices not being reviewed.

F22

If you are satisfied with the review, and the relevant columns have been authorised, press F22 to complete the batch. You can still review items in batches that await the authorisation after the F22 option has been used for the batch.

F23

To cancel the batch. This will remove the account manager/batch number combination and mark the invoice record(s) as 'deleted'.

The item is the invoice number that will appear on the invoice. The customer name, associated job number and base value are displayed for each invoice number.

From this point, the batch total/control total matching is done.

F4 for review will display the following information:

Fields:

(Option)

4 - delete a line.

8 - amend the line.

By entering 8, you are taken back to the document screen which you have chosen to amend. The text, VAT code, and amounts can be changed according to your needs.

Item

The invoice.

Line

The line number on the invoice.

Name

The customer name.

Job Number

The job number associated with the invoice document.

Currency

The income currency of the batch.

Value

The value entered for each document item, excluding VAT. This value will be posted against the associated job number as income.

Print Invoices/Credit Notes

6/JCB

Each transaction will generate its own text as follows:

Invoice Level

Invoice level text can be entered via the Job Types option.

Stage Payments

- a) Text entered against the stage payments.
- b) If no text is entered in a), then the job detail external text is printed.
- c) If no text is entered in a) or b) then the job detail description is printed.

Time & Material

Generally, the rules are as follows:

- a) Text entered against the cost transaction.
- b) If no text is entered in a), then the job detail external text is printed.
- c) If no text is entered in a) or b) then the job detail description is printed.

If timesheet data is being printed and the 'Invoice Hours Text' flag on the job type is set to 1, then for situations b) and c) the text is followed by a line showing transaction date, hours and hourly rate.

If employee expense data is being printed then for situations b) and c) the text is followed by the expense type description.

The printing of invoices is driven by one of two methods.

- Any invoices generated by Job Management which do not need review will automatically print when the Generate Automatic Invoices option is run.
- Any invoices flagged for review which have been reviewed, and any invoices/credit notes entered via Sundry Invoices/Credit Notes will be printed when the Print Invoices/Credit Notes option is taken, or when Generate Automatic Invoices is run again.

The printing of invoices incorporates four processes.

- Posting to Accounts Receivable.
- Posting to General Ledger.
- Actually printing the documents.
- Updating Job Management.

For reviewed invoices, the original data will be as for automatically generated invoices, but this can be changed during the review process.

Credit note details are printed in a similar format to invoices.

If the 'IVD' process code is active, the status of the job detail changes to that associated with the 'IVD' code.

Reprint Invoices/Credit Notes

7/JCB

Use this option when you wish to reprint invoices or credit notes.

Note: You cannot use this option to print invoices or credit notes that have not already been printed!

Reprint Invoices/Credit Notes Screen 1

Take the Reprint Invoices/Credit Notes option to see the Reprint Invoices/Credit Notes Screen 1.

Fields:

Sel

Selection field. Enter 1 against any invoice you wish to reprint, and press **Enter**. The details of your selected invoices will be displayed on the Reprint Invoices/Credit Notes Screen 3, and you can scroll through them.

If this field displays an asterisk (*), then this invoice or credit note has never been printed, and so you cannot select it for reprinting.

When you have selected the documents you wish to reprint, press Enter to go to the Reprint Invoices/Credit Notes Screen 3.

Reprint Invoices/Credit Notes Screen 3

Select an invoice or credit note on the Reprint Invoices/Credit Notes Screen 2 to see the details displayed on this screen.

If your selection criteria on the Reprint Invoices/Credit Notes Screen 1 meant that only one invoice or note was found, then the Reprint Invoices/Credit Notes Screen 2 is not displayed, and these details are displayed straight away.
