Invoicing

Labour Price List Maintenance

1/SSI

Use this option to add, update and delete labour and travel rate price lists by currency. The lists are used in job pricing, to determine the labour and travel charges to be applied.

Price lists are recorded against models; this is how job pricing determines which labour rate list to use.

You can enter an effective date against any price list to allow for future price increases.

Labour Price List Maintenance Screen

Select Labour Price List Maintenance.

Fields:

Price List Code

Enter a price list code of up to three alphanumerics.

The price list code, its currency and effective date, identify a set of hourly labour rates to be used in pricing.

Currency Code

Enter a three character alphanumeric code.

Effective Date

Enter the date using the format DDMMYY. This date, together with the price list and currency codes, identifies a set of hourly labour rates to be used in pricing.

If you do not enter an effective date, a list of all existing price lists for the price list code will be displayed.

Press **Enter** to display the Labour Price List Maintenance Details screen.

Labour Price List Maintenance Details Screen

To display this screen press **Enter** on the Labour Price List Maintenance screen.

Fields:

Untitled

Select. Enter 1 against the price list you wish to select.

Date

This is the date on which the price list comes into force.

Contract

This is the an hourly labour rate.

On a chargeable job, if the work is carried out by a field engineer on equipment covered by a contract, this hourly rate is used in pricing the job.

Non-Contract

This is the hourly labour rate.

If, on a chargeable job, the work is carried out by a field engineer and the equipment is not covered by a contract, this hourly rate is used in pricing the job.

Workshop

This is the hourly labour rate.

If the work is carried out by a workshop engineer, this hourly rate is used in pricing the job, whether or not the equipment is on contract.

Travel Rate

This is the hourly rate.

If travel is chargeable on a job, this rate is multiplied by the customer travel time, from the technical report, to calculate the travel charge.

Press **Enter** to display the Labour Price List
Maintenance Labour Rates screen.

Labour Price List Maintenance Labour Rates Screen (Option 1)

To display this screen select a price on the Labour Price List Maintenance Details screen and press **Enter**.

Price List Code

This is the code entered or selected on the previous screen.

Currency Code

The three character alphanumeric code from the previous screen.

Effective Date

This is the date entered or selected on the previous screen.

Contract Rate

Enter the hourly labour rate.

On a chargeable job, if the work is carried out by a field engineer on equipment covered by a contract, this hourly rate is used in pricing the job.

Non-Contract Rate

Enter the hourly labour rate.

On a chargeable job, if the work is carried out by a field engineer and the equipment is not covered by a contract, this hourly rate is used in pricing the job.

Workshop Rate

Enter the hourly labour rate.

If the work is carried out by a workshop engineer, this hourly rate is used in pricing the job, whether or not the equipment is on contract.

Travel Rate

Enter the hourly labour rate.

If travel is chargeable on a job, this rate is multiplied by the customer travel time, from the technical report, to calculate the travel charge.

Select **F8=Update** to save details to file.

Contract Credits Maintenance

2/SSI

Use this option to view or amend contracts, invoices or pending invoices, and to accept them for the production of a part credit note, or a full credit and re-invoice. They may even be discarded altogether from the crediting routine.

Description

The report produced by the Contract Credit Selection option is intended to be the input document for Contract Credits Maintenance.

Where deferred income is involved (that is, in pre-paid contracts of more than one month), the amount of deferred credit can be the subject of specific enquiry.

When the values calculated are acceptable, the credit can be updated. You can credit the original invoice in full, and re-invoice the outstanding amount, or credit a proportion of the original invoice.

Note: For pending invoice records (that is, where the invoice price has been calculated, but the invoice has not been printed or posted), only the re-invoice option is allowed.

*Note: If the invoice or pending invoice records are not to be credited, they may be discarded and removed from the report of records selected for credit - **F11=Discard**.*

Implications

The option to give a full credit against the original invoice, and reissue a new invoice, should only be used if it does not infringe local tax regulations.

The amount of deferred credit given will directly mirror the amount of deferred revenue posted from the original invoice. If you want to take the credit over a different period to the original posting periods, do this through a journal entry in the General Ledger.

Contract Credit Maintenance automatically removes pending invoices if the contract:

- Has been terminated early through contract maintenance so that the pending invoices are beyond the new end date.
- Has had the first invoice selected for credit and actioned.

Note: You cannot reverse a contract invoice using the Create Sundry Credit Notes option. That option can only be used to reverse a job invoice.

After Contract Credit Maintenance, run Generate And Print Invoices to print re-invoices and credit notes. Do not run Print Sundry Invoices/Credit Notes for these credits/re-invoices.

Contract/Invoice Selection Screen

Select Contract Credits Maintenance.

Currency rate code.?..: _____			
Currency rate.....: _____			
Multiply/Divide (0/1)..: _____			
or			
Invoice Period.....: _____ From _____ To _____			
F3=Exit F4=Prompt			
MA	a		06/027

Fields:

Contract Number

Enter the contract number to be credited, of seven alphanumeric, from the contract selection report.

Contract Type

Enter the contract type for the contract number.

Contract Date

Enter the date associated with the contract number and type.

Invoice Number

Either: Enter the specific invoice number, in the format I + six numerics, for the contract number, type and date;

Or: Leave blank and go to the Invoice Period fields.

Currency Code

This is the currency code.

Currency Rate Code

Enter the currency rate code as appropriate, if the customer requires a credit in a currency other than your base currency.

If you do not have a code set up, then enter the Currency Rate and Multiply/Divide fields instead.

Currency Rate

If the customer requires a credit in a currency other than your base currency, enter here the rate to be used to convert the value of the credit.

This must be used in conjunction with the Multiply/Divide field.

Multiply/Divide

If the customer requires a credit in a currency other than your base currency, then enter the rate to be used in the Currency Rate field, and enter here whether the system is to multiply or divide the rate into the value.

Enter one of the following:

0 - Multiply.

1 - Divide.

Invoice Period From

As an alternative to selecting an invoice number, and specifically for pending invoices, enter a Date From, in the format DDMMYY.

Use the date printed on the contract credit selection report.

Invoice Period To

For pending invoices, enter a date in the format DDMMYY. Use the date printed on the contract credit selection report.

Functions:

F6

Override Currency Rate. Use this function to override currency details for transactions where currencies are not linked to the Euro.

Press **Enter** to display the Contract Header screen.

Override Conversion Parameters Window (F6)

To display this window, select **F6=Currency Override Rate** on the Contract/Invoice Selection screen, where one of the currencies involved in was not an IN Currency.

IN currencies are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between currencies that are considered to be an IN Currency, that is defined to the Euro, will be fixed and therefore not maintainable. Selecting **F19=Currency** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

Fields:

Rate Code

Select a rate code as set up in the Currency Rate Code option within Financials.

Rate

Or: Enter a rate using up to five decimal places.

Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Source to Euro

This specifies whether either the source or target currencies are defined as an IN Currency, that is linked to the Euro. The detail defaults from the Euro Currencies Maintenance option within Financials and decides the Euro calculation.

0 - The currencies will be converted directly. This is not an option for member currencies of the Euro.

1 - Uses a triangulation currency conversion. This is the option for member currencies of the Euro.

Press **Enter** to apply the rate and convert the currencies.

Contract Credit Maintenance Contract Header Prices

To display this screen press **Enter** on the Contract/Invoice Selection screen.

If you use contract header pricing as the basis for pricing and invoicing, any amendments will be made at header level.

If you use contract equipment line pricing you can select to edit each of the machines on the invoice.

```

```

Fields:

Credit Dates - Requested

This displays the date which was entered in the Contract End Date on the contract header; this is assumed to be the date requested for contract termination.

You can change the date to affect the value of the credit. Changing the date to the invoice start date will give a full credit for the invoice period.

Credit Dates - Actual

This is the requested credit date plus the penalty days. Adding the penalty days to the requested date will not result in a date which is greater than the end of the invoice period.

Penalty

The value used is taken from the Termination Days field on the contract type. You can change this to a value between one and 999.

The penalty days will be added to the Credit Dates - Requested. No penalty can be taken beyond the end of the invoice period.

Functions:

F5

Recalculates the value of the credit and re-invoice, if changes are made.

F8

Update - credit.

This updates any editing and produces a credit against the original invoice. The original invoice number is written to the credit note header.

The function key is not displayed if the record being edited is a pending invoice.

Note: Follow up with Generate And Print (Contract) Invoices.

F9

Update - re-invoice.

This updates any editing and has the following results:

- For an actual invoice, it produces a credit for the full amount of the original invoice, and a new invoice for the recalculated amount due.
- Follow up with Generate And Print (Contract) Invoices.
- For a pending invoice, it produces a new pending invoice record for the recalculated amount of the invoice. The invoice will be produced by the standard Generate And Print Invoices option, when it is run for the release date appropriate to that invoice.

F11

Discard. This key is used to reject the credit.

The contract and its invoice detail are returned to their status prior to contract credit selection.

F14

Base value/prime value. Use this to toggle between prime and base currency displays.

F16

Contract Enquiry. This is to assist in making credit decisions.

F21

Internal Text.

Text may be accessed from Contract Maintenance or enquiry.

F22

External Text. Up to three lines will print on the credit note.

Contract Header Line Prices Screen

To display this screen use line pricing rather than header pricing (that is, the Header Level Pricing field on the Contract Header Maintenance screen is set Off).

This screen displays the equipment for selection and further editing.

If contract header pricing has been used as the basis for pricing and invoicing, any amendments will be made at header level.

If contract equipment line pricing has been used, each of the machines on the invoice can be selected for editing.

The calculated VAT value for the invoice reversal line, with the VAT rate used shown in brackets.

Functions:

F13

Fold/Truncate. This displays extra details for each line.

F14

Base Value. This toggles between displaying values in base and prime currency.

Price Contracts

20/SSI

Use this option to select contracts, payable in advance or in arrears, which include contract invoice terms and are due for invoicing. It prices them, and generates pending invoice lines.

You can select contracts for a specific branch or for the company.

Use this option every time a batch of contracts needs scheduling for invoicing.

Note: This procedure requires exclusive use of the company.

Implications

If you do not run the Price Contracts option you will not produce invoices for contracts payable in advance or arrears.

If you add visits to a service-and-visits or to a service-rental-and-visits contract, after you have run the Contract Pricing option, the additions will not be charged through contract pricing and invoicing; they must be charged through Job Pricing and Invoicing, using an appropriate charge matrix.

Note: Invoices for contracts payable by visit are processed by the Price Jobs option.

Invoice pending lines are grouped into invoice documents by the Generate And Print Invoices option.

Price Contracts Screen

Select Price Contracts.

SS450P	Demonstration Company	USER BRERETM	30/11/93
	CENTRAL BRANCH		18:19:37

Price Contracts

Select Branch to process..... CI (Leave blank to select all)

Type of Billing required..... 1 (1=Standard 2=Interim 3=Reconciliation)

Price Contracts with Terms Starting on or before... 1/11/93

F3=Exit F8=Submit job F12=Previous

Fields:

Select Branch To Process

Defaults to the user's current branch, which can be overwritten, for which contracts are to be priced.

Leave this field blank to process all branches.

Type Of Billing Required

Enter one of the following:

- 1 - Standard. This prices all service, rental and advance copy charges.
- 2 - Interim. This prices all meter-based copy charges, based on estimated or actual values, which have reached the date on which interim billing is due.
- 3 - Reconciliation. This prices all meter-based copy charges, based on actual readings, which have reached the date on which the reconciliation of metered copies is due.

Press Enter to display the following:

Price Contracts With Terms Starting On Or Before

Enter a valid date (DDMMYY).

This field refers to contract invoice terms, not contract start dates, nor contract duration. Only contracts which have pricing terms, not contract start dates, due on or before the date entered will be processed.

Note: All machines on a contract which have

never been invoiced before are included in this contract pricing run, if their date of inclusion on the contract is less than or equal to the entered date.

Price Jobs

21/SSI

Use this option to find job lines for your branch that are due for invoicing, to price them, and to generate pending invoice lines.

Use this option every time you want to schedule a batch of jobs for invoicing.

Implications

If you do not run this function you will not produce invoices for jobs or contracts payable per visit.

Invoice pending lines are grouped into invoice documents by the Generate And Print Invoices option.

The process produces a summary report. This gives the total number of jobs priced by the batch job, and subtotals of the number of chargeable jobs processed, and the number of non-chargeable. It then gives an analysis of how many jobs, in each status, are still in the job file after pricing is complete. This information is produced only when pricing is run as a batch job.

Note: The job pricing program removes jobs from the active job files and writes them to the job history file, together with statistical data, such as the actual response times for the calls.

Generate And Print Invoices

22/SSI

Use this option to find the available job or contract pending invoice lines for your branch, and to produce invoices, posting them to Financials.

Use this option to print new batch of invoices or to reprint an existing one.

You can also print re-invoicing of contract credits, when credit and re-invoice is required, and to produce contract credit notes.

Invoice Generation

Only pending invoice lines already produced by either the Price Contracts or Price Jobs options are processed for your current branch.

Pending invoice lines which have an availability date less than or equal to the entered date are removed from the pending invoice file and consolidated into invoice headers and lines.

Invoice generation ensures that invoices are created for the contract invoice bill to account. Whenever there is a change in contract owner, within the contract details, the contract invoice will print the name and first address line of the contract owner before printing the equipment line.

You control the consolidation of pending invoice lines into invoices by the Invoice Consolidation Level field in Customer Additional Details Maintenance for the customer. You can group invoice lines by account, location, or job or contract (within currency break and VAT/GST/tax regime you are using World Trade and multi-currency).

If the interfaces to the Sales and General Ledger applications are active, invoice values are automatically posted to the ledgers in the following ways:

- Sales Ledger postings are made directly to the Sales Ledger Open period, unless the Service Management Accounting period is later than that of the Sales Ledger.
- If Basic Financial Integrator (BFI) is active, the General Ledger Account Codes, and the current accounting period to which the transactions are posted, are taken from the Service Management Company Profile. Values are posted to Debtors, Sales, Tax and Deferred Revenue accounts.
- If Advanced Financial Integrator (AFI) is active, account codes set in the journal conditions are used.

Contract Deferred Revenue Posting

The revenue (sales value), from contract invoices for contracts billed in advance, will be deferred across the accounting periods which the invoice term covers.

The total value of the invoices is posted to the deferred income General Ledger account and pairs of journal entries are created to transfer the appropriate posting values to the contract sales General Ledger account in each accounting period within the invoice term. The value of the journal postings for an invoice line is calculated, as follows:

- The number of deferred revenue posting days between the invoice from and to date is calculated. (A deferred revenue posting day is indicated by the day type for the date, as defined on the Daily Calendar File, and is set in DAYT in the Codes/Parameters file).
- The invoice line value is divided by the number of deferred revenue posting days, to give a posting value per day.
- The number of deferred revenue posting days in each accounting period, or part period, spanned by the invoice from and to dates is multiplied by the value per day, to give the posting amount for the period.

Note: There is no back-deferral of revenue for advance contracts being invoiced for a time period which spans previous accounting periods. In this case, the posting values for the previous periods are accumulated into the current period.

Also note that contracts invoiced in arrears, and all job invoices, will have their full invoice value posted to the current accounting period.

Invoice And Contract Credits Print

Contract or job invoices generated by the previous processing, and any others for which a copy invoice has been requested, will be printed, in invoice number sequence.

Where the contract credits procedure requires a credit note, or a credit and a re-invoice, this option must be taken to print the re-invoice and all contract credit notes.

Implications

Running this option causes invoice and contract credit note numbers to be allocated, invoices and contract credits to be generated and printed, and postings to be generated for Accounts Receivable and the General Ledger.

If you never run this option you will never produce job or contract invoices or credit notes.

Service Management And The Euro

Currency rates are stored on transactions within System 21. With the introduction of the Euro and European Monetary Union (EMU) in 1999, the way in which we process any monetary transaction will change.

Each time the system calculates an invoice line value from the prime currency to the base currency, the value is converted by taking into account these Euro considerations.

In a non-Euro situation the base Invoice Header Values are calculated by adding together the base invoice line goods, VAT and grand totals.

In the Euro situation the Prime Grand Total is converted to the Base Grand Total using triangulation.

Note: This may mean that, due to Euro roundings, the invoice header base total values may not be a sum of the lines.

Generate And Print Invoices Screen

Select Generate And Print Invoices.

SS964	Demonstration Company CENTRAL BRANCH	USER BRERETM	30/11/93 18:20:38
Generate & Print Invoices			
Select Invoice type.....	C	J=Job Invoicing C=Contract Invoicing	
Contract Invoices to process..	0	0=Standard 1=Reconciliation / Interim 2=Both	
Select Run type.....	0	0=Actual Invoicing 1=Fictive Invoicing	
Process invoice lines due on or before..	1/11/93		
F3=Exit F8=Submit job			

Fields:

Invoice Type

Enter one of the following:

J - For job invoices.

C - For contract invoices and credits.

Contract Invoices to Process

Enter one of the following:

0 - Standard - Only standard pending invoice lines, generated by contract pricing, will be included on the invoices.

1 - Reconciliation/interim - Only reconciliation and interim pending invoice lines, generated by contract pricing, will be included on the invoices.

2 - Both - All pending contract invoice lines will be available for inclusion on the invoices.

Note: Actual pending invoice line selection will depend on the consolidation level set on the account's Additional Service Details file and carried through to the site's record. Consolidation is also affected by currency and tax regime breaks.

Select Run Type

Enter one of the following:

0 - Actual Invoicing - This will generate invoices and post the invoice details to Accounts Receivable (if installed).

1 - Fictive Invoicing - This will generate invoices, but will not post the invoice details.

Note: The actual or fictive selection is made in the contract header record.

Process Invoice Lines Due Date

Enter the date (DDMMYY) to select which invoice pending lines are to be converted to invoices.

When jobs and contracts are priced, the resulting priced lines have an available date on them, to indicate when these lines can be posted to the ledgers, and an invoice produced.

Only lines which have not been processed before, and have an available date less than or equal to the selected date, will be included in this run.

Note: This function is also used to print copy invoices (for job or contract invoices) and all contract credit notes.

Note: Jobs which have been priced will have their invoice available date set to the date on which they were priced. This means they are available for invoicing immediately.

Contracts priced in advance will have their invoice available date set to the start date of the invoice term or instalment period.

Contracts priced in arrears will have their invoice available date set to the end date of the invoice term or instalment period.

Create Sundry Invoices

23/SSI

Use this option to generate a free format sundry invoice for a customer.

You can specify the model, serial number and related contract details if you wish. These details will be used to record the revenue from the sundry invoice against the correct equipment and contract. None of these details will appear on the invoice itself.

No automatic pricing of any sort takes place.

Transactions will be added to the Accounts Receivable and General Ledger interface files as the sundry invoices are created, and will be posted to the current accounting period.

Entered invoices are printed by the Print Sundry Invoices/Credit Notes option.

Sundry Invoice Entry Screen

Select Create Sundry Invoices.

Serial Number

Enter a serial number of up to 15 alphanumerics, which is also valid with the model code you have specified.

Contract No

Enter a contract number of up to seven alphanumerics.

Contract Type

Enter a contract type of up to three alphanumerics for the contract number you have specified.

Start Date

Enter the actual start date (DDMMYY) of the contract or contract type you have specified.

Currency Code

Use this to overwrite the site default values, otherwise leave blank.

Currency Rate Code

Use this to overwrite the site default values, otherwise leave blank.

Currency Rate

Use this to overwrite the General Ledger default value.

Multiply/Divide

Only use this field if you have entered a currency rate.

0 - Multiply.

1 - Divide.

Functions:

F6

Override Currency Rate. Use this function to override currency details for transactions where currencies are not linked to the Euro.

Press **Enter** to display the Sundry Invoice Entry Detail screen.

Sundry Invoice Entry Detail Screen

To display this screen press **Enter** on the Sundry Invoice Entry screen.

Fields:

No

This line number is set by the system.

Description: Lines 1 To 3

Enter up to three lines of free form text that will print out on the sundry invoice.

VAT

Enter a VAT code of up to three alphanumerics set up in the General Ledger.

Value/VAT Value

Enter either a line value or VAT value.

When you press **Enter** the system will calculate this value and print it on the sundry invoice.

The VAT value must equal value x VAT rate %.

Functions:

F21

Text. Use this to enter or update invoice header text.

Select **F8=Update** to save any changes.

Create Sundry Credit Notes

24/SSI

Use this option to enter free format and job invoice reversal credit notes.

Note: You cannot reverse a contract invoice using the Create Sundry Credit Notes option. This option can only be used to reverse a job invoice.

Description

You can enter two types of credit note:

- A free format credit note - similar to the free format invoice.
- A job invoice reversal credit note, whereby an existing job invoice can be fully or partially reversed to produce a credit note.

You must specify a customer order reference in both cases. You must also process separate Inventory movements, if physical stock adjustments are required.

For a free format credit note the model/serial number and, if required, the related contract details can be entered. These are only used for service revenue reporting, to subtract the sundry credit note value from the revenue associated with the equipment and contract.

If you enter machine or contract details, then the customer has to be the appropriate bill to customer, if one exists. You cannot raise invoices or credits for the site account if Bill To overrides exist.

For a job invoice reversal credit note you enter the invoice number to be reversed (or used as a base), and optionally a job number and technical report number from this invoice. The corresponding invoice lines are displayed. These form the basis of the credit note. You can add, change and delete lines as required, until the correct credit note lines are displayed, and the credit note can then be completed. Because each line on the credit note has a job category, engineer, and model/serial number recorded on it, the credit note values will be subtracted from the detailed service revenue analysis figures.

Transactions are added to the Accounts Receivable and General Ledger interface files as the sundry credit notes are created, and are posted to the current accounting period.

The credit notes created by this option are printed using the Print Sundry Invoices/Credit Notes option.

Credit Note Entry Screen

Select Credit Notes Entry.

Fields:

Account Number

Enter an existing customer account.

If you only enter machine details on this screen, then this must be the ownership account, if there is one. Otherwise, the site account will be used.

If you enter contract details on this screen, then this must be either the contract bill to account or job bill to account, if one exists. Otherwise, the customer on the contract header will be used.

Account Address

The address code for the customer account on the customer file and has a record on the service additional details file.

Customer Order No.

This is the authorisation for the creation of the credit note.

Original Doc Ref.

Can be any document to which this credit note may need to refer.

Invoice Number

Must be an existing job invoice number. You cannot enter a contract invoice number.

This field is used in conjunction with **F15=Invoice Reversal** to enable maintenance of the invoice lines.

Once maintenance has been carried out, the credit note will be for the value of all the lines still visible on the screen.

Job Number

Must be a valid job number. This will display invoice lines with this job number on them. Enter in conjunction with an invoice number, which includes this job number, and **F15=Invoice Reversal**.

Technical Report No

Must be a valid technical report number. This will display invoice lines with this technical report number on the entered job. Enter in conjunction with an invoice number and job number, which includes this technical report number, and **F15=Invoice Reversal**.

Model Number

Must be on the Model file.

Serial Number

In combination with model number, this must be a piece of equipment on the installation record for the entered account and address codes.

Contract No

Must be a valid contract on the system for this customer and the piece of equipment.

Contract Type

Must be pending or active on this contract.

Start Date

Enter if you have not specified a model/serial number.

Last Credit Note No

This is the number assigned to the credit note which has just been created.

Currency Code

Use this to overwrite site default values otherwise leave blank.

Currency Rate Code

Use this to overwrite site default values otherwise leave blank.

Currency Rate

Use this to overwrite the General Ledger default value.

Multiply/Divide

Only use this field if you enter a currency rate.

0 - Multiply.

1 - Divide.

Functions:

F6

Override Currency Rate. Use this function to override currency details for transactions where currencies are not linked to the Euro.

F15

Invoice Reversal - job invoice only.

Press **Enter** to see the Credit Note Entry Detail screen.

Credit Note Entry Detail Screen

To display this screen press **Enter** on the Credit Note Entry screen.

Fields:

Invoice Detail Value

This is the total value, including VAT, of the original invoice number.

Credit Value

This is the total value of the invoice lines still visible on the screen, including VAT. It will be the value of the credit note if you select **F22=Finish Credit**.

Untitled

Select. Enter one of the following:

- 1 - Select a line for update.
- 4 - Delete a line.

Note: There are six invoice line types which can be displayed. The details are as follows:

Travel Hours

Hours Travel

The billable travel time in hours and minutes.

Rate

The hourly rate charged for the travel hours.

VAT Code

The VAT code used to calculate the VAT value of the invoice line.

VAT Value

The calculated VAT value for the invoice line.

Total Value

The net value (Hours x rate) + VAT value.

Functions:

F13

Fold/Truncate. This toggles between displaying summary information and displaying the model, serial number, job category and the engineer who logged the original travel time.

Labour Hours

Labour Hours

The labour hours from technical reporting, for the invoice line.

Rate

The hourly rate charged for the labour hours.

VAT Code

The VAT code used to calculate the VAT value of the invoice line.

VAT Value

The calculated VAT value for the invoice line.

Total Value

The net value (Hours x rate) + VAT value.

Functions:

F13

Fold/Truncate. This toggles between displaying summary information and displaying the model, serial number, job category, the engineer who logged the original labour hours, and the type of labour hours used in the calculation of the invoice line, for example, basic time, time and a half, or double time.

Parts Used

Part Number

The part number from the technical report.

Quantity

The quantity of this part number used on the job selected from the technical report.

VAT Code

The VAT code used to calculate the VAT value of the invoice line.

VAT Value

The calculated VAT value for the invoice line.

Total Value

The net value (Quantity x rate, less discount) + VAT value.

Functions:**F13**

Fold/Truncate. This toggles between displaying summary information and displaying the model, serial number, job category, the engineer who was assigned to the original job, and the calculated discount on the parts. A parts discount list code must have been set up on the site's Additional Service Details.

Miscellaneous Costs**Charge Type**

The miscellaneous charge code from the invoice line.

Charge Type Description

Retrieved from the Codes/Parameter file, using the parameter type CHGT, or from a text record, if the Codes file description was overwritten during technical reporting.

VAT Code

The VAT code used to calculate the VAT value of the invoice line.

VAT Value

The calculated VAT value for the invoice line.

Total Value

The net value (Charge value) + VAT value.

Functions:**F13**

Fold/Truncate. This toggles between displaying summary information and displaying the model, serial number, job category and the engineer who was assigned to the original job.

Contract Visit**Job Category**

The job category from the job header/labour hours screen in technical reporting.

Total Value

The charge value + VAT value.

Functions:

F13

Fold/Truncate. This toggles between displaying summary information and displaying the model, serial number, job category, the engineer who made the original job visit, and the calculated VAT for the invoice line.

Mileage

VAT Code

The VAT code used to calculate the VAT value of the invoice line.

VAT Value

The calculated VAT value for the invoice line.

Total Value

The line value + VAT value.

Functions:

F13

Fold/Truncate. This toggles between displaying summary information and displaying the model, serial number, job category, the engineer who logged the original labour hours, and the number of actual miles/kms driven; the field is not displayed for other distance travelled charges.

You can display six credit note line types (for job invoice reversals only); each type, or any sub-set of that type, has a different input format.

Enter 1 against the line of the required type to maintain its detail, or select **F14=Change Prompt**, to display the sequence of formats and select one, so that you can detail a new line and add using **F10=Add**.

The input formats appear in the sequence Labour, Travel, Parts, Miscellaneous, Fixed Visit, Fixed Travel, Fixed Labour, Actual Distance Driven, Zones and Mileage Standard Distance Value.

Note: Make sure that amendment or additional data is correct: validation of entries is limited to checking whether a record exists, not whether it is logically correct.

Note: Separate Inventory movements must be processed, if physical stock adjustments are required in addition to the invoicing/sales ledger corrections covered by the credit note.

The credit note line type details are as follows:

Labour Hours

Model

A model from the Model file.

Serial Number

A piece of equipment at the account and address codes, to which the credit note relates.

Engineer Number

An engineer from the Engineer master file.

Labour Time

These are the labour hours and minutes to be credited, but are not displayed for a Fixed Labour Hours override.

Rate

This is the labour rate per hour, to be used in the calculation, but is not displayed for a Fixed Labour Hours override.

Job Category

A job category from the Job Category file.

Value

The Labour time x Rate per hour, or the Fixed Labour override, if applicable.

VAT Code

A VAT code from the General Ledger.

VAT Value

The calculated VAT value for the line.

Leave blank for the system to calculate. If you enter this it must be correct.

Labour Type

This must be a code from the parameter type LHTY. The abbreviation indicates the type of labour hours used in the calculation of the line for example, basic time, time and a half, or double time.

Total Value

The Value + VAT value.

Parts Used

Model

A model from the model file.

Serial Number

Must be a valid piece of equipment at the account and address codes, to which the credit notes relates.

Engineer Number

An engineer from the engineer master file.

Part Number

The part number from the Inventory item file.

Quantity

The quantity of the part to be credited. This has no effect on physical stock levels. Separate Inventory movements must be processed to adjust physical stocks.

Unit Price

Price per unit to be used in the value calculation.

Value

The value of the line: Unit Price x Quantity.

Discount

The discount for this line. A parts discount list code must have been set up on the site's Additional Service Details record.

VAT Code

Must be valid in General Ledger.

VAT Value

The calculated VAT value for the line.

If left blank, it will be calculated by the application; if keyed in, it must be correct.

Job Category

Must be a valid job category on the job category file.

Total Value

This is the Value - Discount + VAT value.

Note: If the discount value no longer applies, delete the line then add a new one: you cannot update a discount value.

Miscellaneous Charges**Model**

Must be a valid model on the Model file.

Serial Number

Must be a valid piece of equipment at the account and address codes, to which the credit note relates.

Engineer Number

Must be a valid engineer on the Engineer Master file.

Charge type

Must be valid on the Codes/Parameter file using parameter type CHGT.

This indicates the type of miscellaneous charge to be credited.

Charge Type Description

Retrieved from the Codes file, under parameter type CHGT, or from a text record, if the codes file description was overwritten during technical reporting.

Job Category

Must be a valid job category on the job category file.

Value

The value of the charge to be credited.

VAT Code

Must be valid in General Ledger.

VAT Value

The calculated VAT value for the line.

If left blank, it will be calculated by the application; if keyed in, it must be correct.

Total Value

The value + VAT value.

Contract Visit Fee

Model

Must be a valid model on the model file.

Serial Number

Must be a valid piece of equipment at the account and address codes, to which the credit note relates.

Engineer Number

Must be a valid engineer on the Engineer Master file.

Job category

Must be a valid job category on the job category file.

Value

The value of the visit fee to be credited.

VAT Code

Must be valid in General Ledger.

VAT Value

The calculated VAT value for the line.

If left blank, it will be calculated by the application; if keyed in, it must be correct.

Total Value

The value + VAT value.

Travel Hours

Model

Must be a valid model on the Model file.

Serial Number

Must be a valid piece of equipment at the account and address codes, to which the credit note relates.

Engineer Number

Must be a valid engineer on the Engineer Master file.

Travel time

This is the travel time to be credited, but is not displayed for a fixed travel hours override.

Rate

This is the rate per hour to be used in the calculation, but is not displayed for a fixed travel hours override.

Job Category

Must be a valid job category on the Job Category file.

Value

The travel time x rate per hour, or the fixed travel override, if applicable.

VAT Code

Must be valid in General Ledger.

VAT Value

The calculated VAT value for the line.

If left blank, it will be calculated by the application; if keyed in, it must be correct.

Total Value

The value + VAT value.

Mileage

Model

The model code of the piece of equipment on the invoice line.

Serial Number

The serial number (if present) of the piece of equipment on the invoice line.

Engineer Number

The engineer who logged the original labour hours.

Miles

The number of actual miles/kms driven; the field is only displayed for an actual distance driven record.

Zone Code

The zone code, if applicable to and set up on the site's Additional Service Details record; the field is only displayed for a zone charge.

Job Category

The job category entered on the Job Header/labour Hours screen in technical reporting.

Value

The distance travelled charge: for standard distance and actual distance driven, the details are taken from the site's additional service details record; for a zone charge, it was the zone code (from the site's Additional Service Details record) accessing the zone charge file.

VAT Code

The VAT code, valid in General Ledger, used to calculate the VAT value of the invoice line.

VAT Value

The calculated VAT value for the invoice line.

If left blank, it will be calculated by the application; if keyed in, it must be correct.

Total Value

The line value + VAT value.

*Note: When **F22=Finish Credit** is selected, to complete the Credit Note, only the invoice lines still visible on the screen, or screens, will be used to create the Credit Note.*

Functions:

F10

Add a newly entered line to the credit note.

F13

Fold/Truncate for extra details.

F14

Change prompt to allow entry of one of the other credit note line types.

F16

Job story (job header text).

F21

Credit text. (This will be printed on the credit note).

F22

Finish Credit. Create credit note and post to the Accounts Receivable and General Ledger interface files.

Print Sundry Invoices/Credit Notes

25/SSI

Use this option to print, or re-print, sundry invoices and credit notes.

*Note: Contract credit notes are printed by the
Generate And Print Invoices option.*

The option submits a batch job to print sundry invoices and credit notes which have either been entered but not yet printed, or have been requested for reprint by the Request Copy Invoice/Credit Note option.

Request Copy Invoice/Credit Note

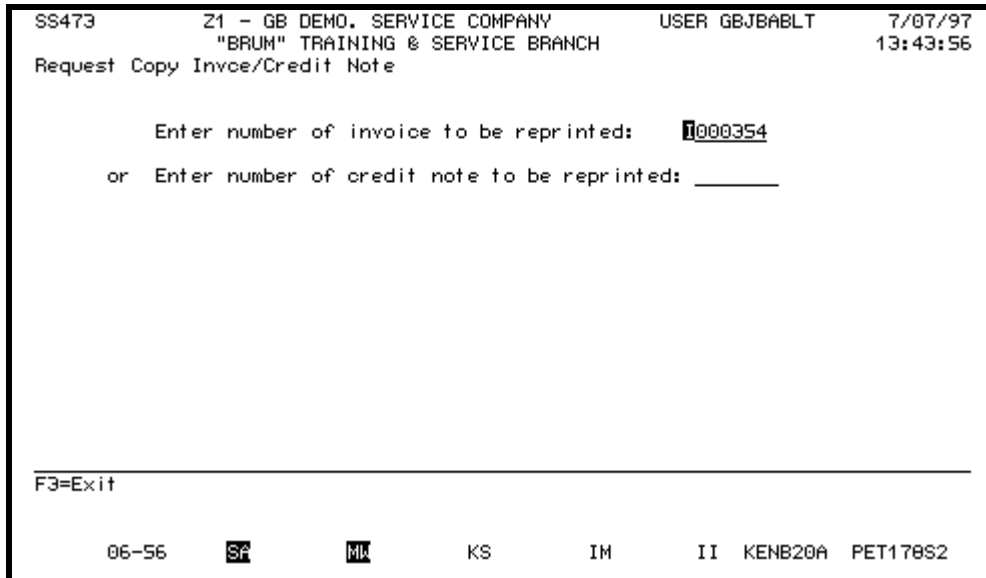

26/SSI

Use this option to re-print invoices and credit notes which have been lost or damaged during printing.

Request Copy Invoice/Credit Note Screen

 Select Request Copy Invoice/Credit Note.

```

Fields:

Job Number

This is the job number entered on the initial screen.

Technical Report No/Line

This is from the engineer's technical report.

Model Code

This is the model for the job line from the line selection screen.

Serial Number

This is the serial number for the job line from the line selection screen.

Invoice Line Type Code

This is the code for the job line from the line selection screen.

Invoice Line Type Description

This is the description of the previous code. This is set up in the Codes/Parameter File Maintenance option, under parameter type RECT.

Engineer Code

This is from the engineer's technical report.

Currency Code

This is the three character alphanumeric code defaulted from the site record, or the miscellaneous charges.

Engineer's Name

This is the description of the engineer code. This is extracted from the engineer master file.

Visit Date

This is from the engineer's technical report.

Line Value

You can amend the job pricing value if required.

NB: If labour hours (that is, HR) are included in more than one report line per technical report, only the first HR line per technical report can be amended. The detail displayed will always be that of the first, amendable HR line.

VAT Code

You can amend this if you wish.

Hourly Rate/Parts Price

You can amend the job pricing value if required.

The appropriate hourly rate is extracted from the labour price list file.

The parts price is from the (SOP) parts price list specified in the site's additional details file.

Hours/Misc Charge Type/Part Number

You can amend the job pricing value if required, but not part number. The data is taken from the engineer's technical report.

Miscellaneous Charge Type codes are set up in the Codes/Parameter File Maintenance option, under parameter type CHGT.

Part Number

This is taken from the engineer's technical report - parts used.

Part Number (cont)/Charge Type Desc'n

This taken from the engineer's technical report.

Part number is from parts used.

Charge type description is extracted from parameter type CHGT in the Codes/Parameter File Maintenance option for the previous charge type code.

Part Number/Charge Type Desc'n (cont)

This is taken from the engineer's technical report.

Part number is from parts used.

Charge type description is extracted from parameter type CHGT in the Codes/Parameter File Maintenance option for the previous charge type code.

Hours Type Code/Parts Quantity Used

You can amend the job pricing value if required.

The details are taken from the engineer's technical report.

Hours type codes are set up in the Codes/Parameter File Maintenance option, under parameter type LHTY. If you change the hours type code to a code that already exists on the job, you must consolidate the hours/line value within one record; the second, identical hours type record must be zeroed. Do not leave the second record; the system ignores it for invoicing.

Parts Quantity Used (cont)

You can amend the job pricing value if required.

The details are taken from the engineer's technical report - parts used.

Select **F8=Update** to save any changes.

Generate Estimates

30/SSI

Use this option to calculate estimated invoices for a particular branch or for all branches. The batch job looks at all metered machines on meterage type contracts - that is, with interim or reconciliation billing cycles or both.

If the contract billing parameters have an interim or reconciliation billing term which ends before or on the date specified, and no estimates already exist, then estimates are generated for all metered machines on that contract.

No report is produced, but the details are written to file. These could be used to print meter cards if you wished to develop the function yourself.

Estimates are calculated based on historical information if this is available. Failing that, either the minimum volume specified on the contract, or the average usage for the model from the volume segment information, is used to arrive at an estimate.

Estimate Generation Request Screen

Select Generate Estimates.

```

SS400                Z1 - GB Demonstration Company        USER GBJBABL  7/07/97
                                                           13:51:27

Estimate Generation Request

Branch.....?..  (Leave blank to generate estimates for all)

Generate estimates for invoice
                      dates up to..... 7/07/97

Number of days after invoice date

F3=Exit  F4=Prompt  F8=Submit

06-22  S  M  KS  IM  II  KENB20A  PET178S2

```

Fields:

Branch

Enter the branch for which you want to generate estimates. Leave blank to select all branches.

Generate Estimates For Invoice Dates Up To

Enter the date cut off date for the generation of estimates. All invoices with a date either equal to or before this will be included.

Number of Days After Invoice Date For Return Of Meter Cards

Enter the number of days, after receiving the invoice, a customer has in which to return their actual meter reading.

Select **F8=Submit** to submit a job to calculate the estimated invoices.

Enter Meter Readings

1... **2...** 31/SSI

Although you can enter meter readings as part of an engineer's technical report, that assumes that there is an outstanding job for the machine. If a machine has no outstanding job but still requires a reading, then separate options are required.

Meter Reading Entry Screen 1

Take Enter Meter Readings.

```
SS405                Z1 - GB Demonstration Company    USER GBJBABL7/07/97

F3=Exit  F12=Previous  F16=Meter History

17-66  SF  MK  KS  IM  II  KENB20A  PET178S2
  
```

Fields:

Reason For Override

Enter reason code for the meter reading override. The reason description is also displayed at the bottom of the window.

A common reason is when a meter rolls over from 99999 to 00000, so the entered reading is less than the previous one. A system-defined reason code is provided for this situation, and should be used only in this case, as it triggers special processing in other parts of the system.

You define your own reason codes in the Codes/Parameter File Maintenance option under type MROV, and you can specify whether these are roll over codes or not.

 Select **F8=Confirm**.

Meter Reading History (F16)
