## Chapter 1

### Maintenance

# Contract Maintenance

## 1/VSM

The Contract Maintenance function is the primary method for entering details regarding the purchase contract, or the items contained in the contract, or the contract item prices. The multi-sourcing rules for a particular item can also be entered and maintained.

The Contract Maintenance is split into three parts:

- Contract Header Maintenance
- Contract Item Maintenance
- Contract Price Structure Maintenance

### **Audit Files**

Any changes to the contract header and items file are recorded on the contract audit files which provide a log of all changes made. An image of the record to be maintained is written to the audit files prior to any changes being made. The only exception to this is when a record is added, a copy of the new record is created on the audit file with the relevant user, time etc.

# Contract Maintenance Screen 1

You use this screen to select the Vendor and Contract Number of the contract you want to maintain.

-  Select Contract Maintenance from the menu to display the first Contract Maintenance screen.

```

VS020          Distribution V3 -> V3 Financials    User GBJBAPH2    7/09/95
                                           14:03:05

```

## Fields:

### Vendor

Enter a vendor code which has been set up in the Purchase Ledger when you set up a new contract. When you enter an existing contract number, the system automatically displays the vendor associated with the contract.

### Contract Number

The next available sequential contract number is displayed. You can override this by typing an existing contract number.

-  Press **Enter** to display the second Contract Maintenance screen.

## Contract Maintenance Screen 2

This screen allows you to enter contract details. All entries relating to dates, values, quantities, and schedule fabrication, material and forecast item spans can be overridden for individual items.

Press **Enter** from the first Contract Maintenance Screen to display the second Contract Maintenance screen.

*Note: You must select F22=Authorise to authorise the contract before it can be used.*

### Fields:

#### Contract Number

This is the contract number entered on the first screen. It cannot be changed.

#### Vendor

This is the vendor code entered on the first screen. It cannot be changed. The vendor name, from the Purchase Ledger Supplier file, is shown below the code.

#### Stockroom

The stockroom code can be entered at the contract header level, or left blank and entered at contract item level to allocate the contract a default stockroom. If entered on this screen, then the field is defaulted to each contract item detail.

#### Currency Code

This indicates the currency of the contract and all items against the contract. Any limiting values entered for the contract will be calculated in this currency. The default is the currency against the vendor in the purchase ledger.

#### Delivery Address

Enter the code for the delivery address which will be used for the purchase orders generated from the contract. This must be a valid address code for the vendor, as defined within the purchase ledger. This will default to the default address code defined on the purchase management company profile file.

**Start Date**

When the start date is entered, it must be a valid date. This is the date from which time this contract is active. You can set up different date ranges for each item so long as they fall within this contract date range. This field is optional.

**End Date**

When the end date is entered, it must be a valid date, and later than the start date. It is the date at which the contract will become inactive. This field is optional.

**Maximum Value**

The maximum value entered in this field will limit the amount (by the contract currency) which can be purchased against a specific contract. This field is optional.

**Maximum Quantity**

This value determines the maximum quantity of items which can be ordered against the contract. This is accumulated in the issue unit of measure and is only accumulated if all the purchase units of measure against all items on the contract are the same. This field is optional.

**Description**

This is text which describes the contract and will be displayed on prompt screens where a selection by contract is allowed.

**Ordered Value**

This is maintained by other functions of the system. If these are required to be manually overwritten in this function, for example if the vendor disagrees with the amount, then the individual quantities on the item can be maintained.

**Received Value**

This is maintained by other functions of the system. If these are required to be manually overwritten in this function, for example if the vendor disagrees with the amount, then the individual quantities on the item can be maintained.

**Returned Value**

This is maintained by other functions of the system. If these are required to be manually overwritten in this function, for example if the vendor disagrees with the amount, then the individual quantities on the item can be maintained.

**Received Quantity**

This is maintained by other functions of the system. If these are required to be manually overwritten in this function, for example if the vendor disagrees with the amount, then the individual quantities on the item can be maintained.

**Ordered Quantity**

This is maintained by other functions of the system. If these are required to be manually overwritten in this function, for example if the vendor disagrees with the amount, then the individual quantities on the item can be maintained.

### **Returned Quantity**

This is maintained by other functions of the system. If these are required to be manually overwritten in this function, for example if the vendor disagrees with the amount, then the individual quantities on the item can be maintained.

### **Vendors Reference**

This is a free format field and you can enter the vendors reference for the contract if required.

### **Schedule History**

This flag indicates if schedule history is to be saved for the contract. Enter one of the following:

0 - You do not want to save the schedule history.

1 - You do want to save the schedule history.

### **P/O Creation Level**

This flag indicates the level at which the purchase orders are to be created. There are four levels of P/O creation.

1 P/O per contract

1 P/O per contract item

1 P/O per vendor delivery

1 P/O per requirement

These are defined on the P/O parameters file. This field is mandatory.

### **P/O Number**

This is the number of the purchase order used if only one P/O is created per contract. This is output only and is displayed when the P/O creation level flag is 1 and the contract has had at least one P/O created.

### **Purchasing Officer**

You may enter the identifier of the purchasing officer responsible for the contract. Purchasing officer codes are defined in Purchase Management.

### **Authorities**

The three authority horizons define the number of days within each period that the schedule requirements are apportioned. The values entered at the contract header level will form the default for each of the items associated with the contract. These fields are optional.

### **Receiving Address**

Enter a valid receiving address code as defined in Purchase Management, if required. This will be the receiving address for all purchase orders created for this particular contract.

### **P/O Delivery Ins**

Enter a valid code for the delivery instructions which are to appear on each purchase order created against this contract. These codes are defined in Purchase Management. This field is mandatory.

### **Fax / Print / EDI Indicator**

These three flags indicate the method of transmission of the schedule. Usually only one method is used, although the system will allow you to set up more than one.

Enter 1 next to the method you wish to use to send released schedules.

Select **F8=Update** to update and write current screen details to the database. The Contract Item Maintenance Screen is displayed.

### **Functions:**

#### **F14**

Print. This prints the entire contract.

#### **F15**

Vendor Details. This displays the first details screen of the supplier enquiry, for more information refer to the Purchase Ledger Supplier Enquiry screen. On exiting the enquiry screen the system will display this screen, the second Contract Maintenance screen.

#### **F16**

What Bought. This displays the What Bought Enquiry Screen. For more information, refer to the Purchase Management What Bought Enquiry Screen. On exiting the enquiry screen, the system will display this screen, the second Contract Maintenance screen.

#### **F17**

Copy Contract. This displays the copy contract window which allows you to set up a new contract by copying an existing one.

#### **F20**

Internal Text. This displays a standard text window where you can enter free format text against the contract. Internal text is only used within the system.

#### **F21**

External Text. This displays the standard Purchase Management text window where you can enter free format text relating to the contract. If text exists then a message will be displayed stating 'Contract Text Exists'.

#### **F22**

Authorise. This is a toggle key which has two functions:

Authorise - Allows you to authorise a contract.

Revoke Authority - Allows you to revoke the authority on a contract.

## Contract Item Maintenance Screen (F8)

This option allows you to select an item to maintain, or add a new item to an existing contract.

If no items exist for the contract the Enter Contract Items screen is displayed. When items exist for the contract, a list is displayed allowing you to select the item you require.

Select **F8=Update** from the second Contract Maintenance screen to display the Contract Item Maintenance Screen.

F3=Exit F10=Add F12=Previous

11-03   **SF**   MW   KS   IM   II   KENB20A   PET158S1

### Fields:

#### Sel

Enter one of the following:

1- Item Details. This displays the Item Details window which allows you to enter all the items covered by the contract.

2 - Accumulated Totals. This displays the Item Accumulated Values window which allows you to view values and quantities for this item.

4 - Delete. The system will delete the contract item details. This is only allowed if no purchase orders have been raised against the contract for the item. Deleting a contract item line will delete any multi-sourcing rule entries for this contract item as well. The deletion of an item record requires a confirmation before actioning the file updates.

If you are creating a new contract and there are no items set up, the window for contract details will be displayed immediately after you have confirmed the header.

## Item Details Window (Option 1 / F10)

-  Enter option 1 on the second Contract Item Maintenance screen to display the Item Details window.
-  Select **F10=Add** on the second Contract Maintenance screen to display the Item Details window.

This window allows you to enter all the items which are to be covered by the contract.

### Fields:

#### Item

This is the item number as defined in Inventory. It must be defined within the stockroom entered. The item description is displayed below the item code. The same item / stockroom combination cannot be entered more than once.

#### Stockroom

This is the stockroom for the item. If a stockroom code has been entered at the contract level, then this will default to the contracts value. This is a mandatory field and must be a valid stockroom code as defined in Inventory.

#### Start Date

This date indicates when the contract is to be effective for the individual item, if the date is required to be different from that of the contract overall.

#### End Date

The end of the contracts effectiveness for the item.

*Note: Both date fields are optional, but if entered they must be a valid date. Both will default to the*

*dates on the contract header.*

### **Maximum Value**

This value will limit the amount (by the contract currency) which can be purchased against a particular contract item. This field is optional.

### **Maximum Quantity**

This value will limit the quantity of items (in purchase unit of measure) which can be ordered for this contract item. This field is optional.

### **Authorities**

The three authority horizons define the number of days within each period that the schedule requirements are apportioned. These fields are mandatory.

### **Purchase UOM**

Enter a valid UOM code for the purchase of this item. This will default to the purchase UOM as defined on the item in inventory. Any of the three units of measure defined against the item in inventory can be used (issue, stock or purchase). This is mandatory.

### **Issue UOM Conversion Factor**

These are retrieved from the item details in inventory.

### **Schedule Print Frequency**

These two fields define the frequency at which the schedule is issued to the Vendor. Enter one of the following:

D in the first field and a number in the second to indicate the number of days between schedule issue.

W in the first field and a number in the second to indicate the number of weeks between the schedule release.

M in the first field and a number in the second to indicate the day on the month the schedule will be issued (in this case the number must not be greater than 28).

These fields are mandatory.

### **Last Issued**

This is the last date that a schedule was printed, faxed, or EDI'd to the vendor for this item.

Select **F8=Update** to create or amend records as required.

### **Functions:**

#### **F15**

P/O lines enquiry. The purchase order lines raised for this item are displayed.

#### **F16**

Item / Vendor profile. This displays the Item / Vendor profile function. For more information, refer to the Item Supplier Profile Maintenance screen in Purchase Management.

### **F17**

Prices. This displays the Item / Contract Price Structure Maintenance screen where a price structure can be entered for this contract item.

### **F18**

Multi-Sourcing. This will take you into the multi-sourcing routine. If there are no other multi-sourcing records set up for the item, then this will display the header screen, otherwise the details screen will be displayed. The only exception is if the multi-sourcing rule is 1 (least price) and has already been set up for the item, then a message will indicate that rule 1 applies.

*Note: If you create a contract item which will be active concurrently with another contract for the same item,, then after selecting F8, you will be automatically taken into the multi-sourcing header screen.*

### **F20**

Internal Text. This displays a text window which allows you to enter any free format text relating to the contract. If text exists then a message is displayed under the print flags stating 'Contract Item Text Exists'. Internal text is only used within the system.

### **F21**

External Text. This displays the Purchase Management text window where the you can enter any free format text relating to the contract. If text exists then a message will be displayed under the print flags stating 'Contract Item Text Exists'. External text can be printed onto documents.

## Item / Contract Price Structure Maintenance Screen (F17)

Select **F17=Prices** from the Item Details screen to display the Item / Contract Price Structure Maintenance screen.

This screen allows you to set up a price structure which applies to any purchase orders raised against this contract. The structure works on the logic that the more you order the less you pay for each individual item. Each new entry in the structure should, therefore, hold a greater quantity and a lower price.

If a price profile already exists for the vendor / item within purchase management, then this forms the default when first entering this screen.

The output fields at the top of the screen are taken from the contract and item to which the price profile relates. The effectivity dates are those of the item.

### Fields:

#### Ref

This is the reference number relating to the line in the price structure. You can select this line for amendment by entering this reference number in the relevant field at the base of the screen.

#### Quantity Break

This is the quantity break for this line in the price structure. The relevant price per item is displayed next to this break.

#### Price

This is the price for the individual item in this structure. The price relates to the issue unit of measure unless you have specified that a different purchase unit of measurement should be used for this contract.

Select **F8=Update** to confirm the details you have entered.

## Item Accumulated Values Window (Option 2)

Enter a 2 in the Sel field from the second Contract Item Maintenance screen to display the Item Accumulated Values window.

This screen allows you to compare the accumulated values and quantities held for this item in this contract with the maximum values and quantities allowable. The values displayed are accumulated by other functions in the system but can be amended on this screen. If you amend any values / quantities at the item level this causes the similar change to occur in the accumulated quantities at contract header level. This function requires a password to be defined on the Vendor Scheduling Company Profile.

### Fields:

#### Ordered Value

This is the value ordered for this item in this contract. You can change this value if required.

#### Received Value

This is the total value of all the receipts of this item in this contract. Receipts are registered when the item is received in Purchase Management. You can change this value if required.

#### Returned Value

This is the total value of returns held for this item in this contract. Returns are performed in Purchase Management. You can change this value if required.

#### Ordered Quantity

This is the quantity ordered for this item in this contract. You can change this value if required.

### **Received Quantity**

This is the total quantity of all the receipts of this item in this contract. Receipts are registered when the item is received in Purchase Management. You can change this value if required.

### **Returned Quantity**

This is the total quantity of returns held for this item in this contract. Returns are recorded in Purchase Management. You can change this value if required.

Select **F8=Update** to confirm the details that you have entered.

## Copy Contract Window (F17)

Select **F17=Copy Contract** from the second Contract Maintenance screen to display the Copy Contract window.

This window allows you to copy an existing contract. This is especially useful when existing contracts are renewed for the following year.

### Fields:

#### New Contract

Enter the new contract number.

#### Start Date End Date

Enter a valid start and end date.

*Note: The dates must not overlap the dates for the contract being copied.*

#### Copy Option

Use this to copy the details of this contract to a new contract number. The accumulated totals against each contract and contract item will be zero in the copied contract and contract items. The purchase order number will also be blank for the new contract.

Enter one of the following:

- 1 - Only copies the contract header details, prices and items are as required.
- 2 - Copies the header and item details, but not prices.
- 3 - Copies all header details, contract items, and their respective prices.

After the copy you are returned to the header maintenance screen, with the details of the new contract displayed. Copying an existing contract creates a new 'unauthorised' contract.

Select **F8=Update** to initiate the contract copy.  
After the copy you are returned to the header maintenance screen, with the details of the new contract displayed. Copying an existing contract creates a new 'unauthorised' contract.

## Internal Contract Text (F20)

- ➡ Select **F20=Internal Text** from the second Contract Maintenance screen to display the Internal Contract Text window.

This window allows you to enter any line level text relating to the contract. Text entered using this window is only used within the system.

The screenshot displays the 'Internal contract text' window. At the top, it shows contract details: VS024, Z1 - GB Demonstration Company, User GBUBA1MS, 18/09/97, 11:23:54. Below this, contract maintenance fields are listed: Contract number (D000122), Vendor (AAA), Stockroom (?), Association of Active Architects, Currency code (DEM), Delivery address (000), Start date, End date, Maximum value, and Maximum quantity. A list of fields for text entry is shown: Description, Ordered value, Received value, Returned value, Ordered quantity, Received quantity, Returned quantity, Vendor reference, Schedule history, P/O creation level, Fax, and EDI. A list of lines (1-6) is displayed for text entry. At the bottom, there are function keys: F3=Exit, F4=Prompt, F15=Vendor Detail, F16, F21=External text, F5=Refresh, F8=Update, and F12=Previous. The status bar at the bottom shows 14-33, SA, NW, KS, CL, IM, DM, II, EDN4000, KB, and PET178S1.

### Fields:

#### Position To

Enter the line number you want to display at the top of the screen.

#### Insert

Enter the number of blank lines you want to insert, and the line number after which they should be inserted.

#### Delete

Enter the number of lines you want to delete, and the line number from which you want to start the delete.

- ➡ Select **F8=Update** to update the text file and display the second Contract Maintenance screen.

# Contract Text to Print Window (F21)

- ➡ Select **F21=External Text** from the second Contract Maintenance screen to display the Contract Text to Print window.

This window allows you to add line level text relating to the contract. External text can be printed onto documents and forms.

```

### Fields:

#### Sel

Enter one of the following:

- 1- Item Details. This displays the item details window which allows you to maintain items.
- 2 - Accumulated Totals. This displays the Item Accumulated Values window which allows you to amend accumulated values.
- 4 - Delete. This allows you to delete the contract item details. This is only allowed if no purchase orders have been raised against the contract for the item. Deleting a contract item line will delete any multi-sourcing rule entries for this contract item as well.

Press **Enter**.

### Functions:

#### F10

Add a new item. This displays the Item Details window which allows you to add a new item to a contract.

## Item Details Window (Option 1 / F10)

-  Enter 1 in the Sel field on the second Contract Item Maintenance screen to display the Item Details window.
-  Select **F10=Add** on the second Contract Item Maintenance screen to display the Item Details window.

This window allows you to maintain and add items against a contract.

### Fields:

#### Contract Number

Enter the contract number you want to maintain.

#### Vendor

Enter the vendor code for the contract you want to maintain.

#### Start Date

Enter the date when the contract is to be effective for the individual item, if the date is different from that of the overall contract.

#### End Date

Enter the end date of the contracts effectiveness for the item.

*Note: Both date fields are optional, but if entered they must be a valid date. Both will default to the dates on the contract header.*

#### Maximum Value

This limits the amount (by the contract currency) which can be purchased against a particular contract item. This field is optional.

### **Maximum Quantity**

This limits the quantity of items (in purchase unit of measure) which can be ordered for this contract item. This field is optional.

### **Authorities**

The three authority horizons define the number of days within each period that the schedule requirements are apportioned. These fields are mandatory.

### **Purchase UOM**

Enter a valid UOM code for the purchase of this item. This defaults to the purchase UOM defined on the item in inventory. Any of the three units of measure defined against the item in inventory can be used (issue, stock or purchase). This is mandatory.

### **Issue UOM Conversion Factor**

These are retrieved from the item details in inventory.

### **Schedule Print Frequency**

These two fields define the frequency at which the schedule is issued to the Vendor. Enter one of the following:

D in the first field and a number in the second to indicate the number of days between schedule issue.

W in the first field and a number in the second to indicate the number of weeks between the schedule release.

M in the first field and a number in the second to indicate the day on the month the schedule will be issued (in this case the number must not be greater than 28).

These fields are mandatory.

### **Last Issued**

This is the last date that a schedule was printed, faxed, or EDI'd to the vendor for this item.

Select **F8=Update** to create or amend records as required.

### **Functions:**

#### **F15**

P/O lines enquiry. The purchase order lines raised for this item are displayed.

#### **F16**

Item / Vendor profile. This displays the Item / Vendor profile function. For more information, refer to the Item Supplier Profile Maintenance screen in Purchase Management.

#### **F17**

Prices. This displays the Item / Contract Price Structure Maintenance screen where a price structure can be entered for this contract item. For more information, refer to Item / Contract Price Structure Maintenance Screen.

### **F18**

Multi-Sourcing. This takes you into the multi-sourcing routine. If there are no other multi-sourcing records set up for the item, then this displays the header screen, otherwise the details screen is displayed. The only exception is if the multi-sourcing rule is 1 (least price) and has already been set up for the item, then a message will indicate that rule 1 applies.

*Note: If you create a contract item which will be active concurrently with another contract for the same item,, when you select F8, you will be automatically taken into the multi-sourcing header screen.*

### **F20**

Internal Text. You use the displayed text window to enter any free format text relating to the contract. If text exists then a message is displayed under the print flags stating 'Contract Item Text Exists'. Internal text is only used within the system. For more information, refer to the Internal Contract Text window.

### **F21**

External Text. This displays the Purchase Management text window where you can enter any free format text relating to the contract. If text exists then a message will be displayed under the print flags stating 'Contract Item Text Exists'. External text can be printed onto documents. For more information, refer to Contract Text to Print window.

## Item Accumulated Values Window (Option 2)

Enter 2 in the Sel field in the second Contract Item Maintenance screen to display the Item Accumulated Values window.

The values displayed are accumulated by other functions in the system but can be amended on this screen if required. Amending any values / quantities at the item level causes the similar change to occur in the accumulated quantities at contract header level.

### Fields:

#### Contract Number

Enter the contract number you want to maintain.

#### Vendor

Enter the vendor code for the contract you want to maintain.

#### Start Date

This date indicates when the contract is to be effective for the individual item, if the date is required to be different from that of the contract overall.

#### End Date

The end of the contracts effectiveness for the item

*Note: Both date fields are optional, but if entered they must be a valid date. Both will default to the dates on the contract header.*

#### Maximum Value

This is optional. This value, if relevant to the particular contract item, will limit the amount (by the contract currency) which can be purchased against a particular contract item.

#### **Ordered Value**

This is the value ordered for this item in this contract. You can change this value if required.

#### **Received Value**

This is the total value of all the receipts of this item in this contract. Receipts are registered when the item is received in Purchase Management. You can change this value if required.

#### **Returned Value**

This is the total value of returns held for this item in this contract. Returns are performed in Purchase Management. You can change this value if required.

#### **Ordered Quantity**

This is the quantity ordered for this item in this contract. You can change this value if required.

#### **Received Quantity**

This is the total quantity of all the receipts of this item in this contract. Receipts are registered when the item is received in Purchase Management. You can change this value if required.

#### **Returned Quantity**

This is the total quantity of returns held for this item in this contract. Returns are recorded in Purchase Management. You can change this value if required.

Select **F8=Update** to confirm the details that you have entered.

# Sourcing Rules Report

## **1...** **2...** **3/VSM**

This function allows you to define the differing sets of algorithms for a particular item and model / stockroom / centre to ensure that any requirements generated from MRP / DRP / MPS are allocated to the most appropriate vendor(s). This allocation may be by the lowest price, or amount to date, or by proportions of the individual requirements.

## Multi Sourcing Rules Maintenance Screen 1

Select Sourcing Rules Maintenance to display the first Multi-Sourcing Rules Maintenance screen.

This screen allows you to select a particular item and source for which a multi-sourcing rule is to be defined.

### Fields:

#### Item

Enter a particular item for which a multi -sourcing rule is to be defined. The item must be defined in Inventory.

#### Demand Type

Enter one of the following to identify where the demand for the item is coming from:

- 1 - MRP
- 2 - MPS
- 3 - DRP
- 4 - Inventory
- 9 - \*All

#### Demand Point

Enter the point of demand from where the item is to be sourced.

If you have specified that sourcing should come from Inventory, the demand point will be Stockroom.

If the source is from MPS or MRP the demand point will be a model set up in Production.

\*All means that a multi-sourcing rule can be established for all demand points.

Select **Enter** to display the second Multi-Sourcing Rules Maintenance screen.

## Functions:

### F10

Select Existing. This displays the Select Existing Rule for Item window which allows you to select an existing item / stockroom rule previously set up.

## Select Existing Rule for Item Window (F10)

Select **F10=Select Existing** from the first Multi-Sourcing Rules Maintenance screen to display the Select Existing Rule for Item window.

This window allows you to select an existing item rule to maintain from a list displayed in item and start date order.

### Fields:

#### Position To Item

Enter an item or a character in this field to position the list to start at the required item or item start character.

#### Sel

Select. Enter a 1 next to the item you want to select.

Press **Enter** to display the first Multi-Sourcing Rules Maintenance screen.

## Multi-Sourcing Rules Maintenance Screen 2

Select **Enter** from the first Multi-Sourcing Rules Maintenance screen to display the second Multi-Sourcing Rules Maintenance screen.

This screen allows you to define the rule and the effectivity dates for the item / stockroom selected. It also allows you to define the type of multi-sourcing rule which applies to the requirements for the particular source and item.

|                                           |                                   |                                        |                          |      |          |                     |

### Fields:

#### Rule

This is a mandatory field. If you are amending details for an existing rule, this field is protected. Enter one of the following values:

- 1 - Lowest price
- 2 - Percentage of Individual Requirement
- 3 - Overall Percentage.

#### Effective Date

These dates are optional. When you enter no dates the rule is always current. When you enter dates, they must be valid and the 'from' date must not be greater than the 'to' date.

Select **F8=Update** to update the screen details to the database. When rule 1 is selected the first Multi-Sourcing Rules Maintenance screen is displayed. When rules 2 or 3 are selected, the Vendor Rules Maintenance screen is displayed.

## Vendor Rules Maintenance Screen

Enter 2 or 3 in the rule number field from the second Multi-Sourcing Rules screen and select **F8=Update** to display the Vendor Rules Maintenance screen.

This screen allows you to enter details which control the allocation of requirements to various vendors for rules 2 and 3.

### Fields:

#### Preferred Vendor

Enter the vendor who receives the order when the existing rules do not satisfy any of the restrictions set up against a vendor. This field is mandatory.

#### Sequence

Enter the order in which the vendors are processed. Changing the sequence number will reload the screen, and recreate new sequence number 10, 20, 30 etc. in the desired order. This defaults to 10, 20, 30 down the screen.

#### Vendor

Enter the vendor code to whom the rule applies. This must be a valid vendor as defined in the purchase ledger.

#### Proportion

Enter a number in the range 0.01 to 100.00 to indicate the proportion of the requirement which will be allocated to the vendor indicated. The actual application of this number differs depending on whether rule 2 or rule 3 is used. This is optional for rule 2, but mandatory for rule 3.

#### Maximum Quantity

Enter the maximum amount which can be ordered in a single requirement against this vendor. This is optional.

*Note: For rule 3, the maximum column is not be displayed.*

### **Minimum Quantity**

Enter the minimum quantity which can be ordered as an individual requirement against this supplier. This is optional.

### **Rounding To Minimum**

This flag indicates if the minimum quantity entered is to be rounded 'up to'. This defaults to 0.

### **Rounding Multiple**

Enter a value if the requirement quantities are to be rounded to a multiple of entered value. If this value is left as zero then no rounding will occur.

### **Contract Number**

Enter the contract number to which any raised purchase orders apply. This is optional. The same contract number cannot be entered more than once for an individual set of multi-sourcing rules. The contract number must be for the vendor entered.

### **Dates**

These are the start and end dates of the contract item (if entered). For contracts which are not authorised, or effective at the current date of entry, the dates are highlighted.

### **Cumulative Quantity Ordered**

This is a calculated percentage derived from the total ordered for the contract item to date, divided by the maximum quantity for the contract item. Both these values are held at contract item level.

Select **F8=Update** to confirm the screen values and display the first Multi-Sourcing Rules Maintenance screen.

## **Functions:**

### **F10**

Add. This displays a window which allows you to add a new sourcing rate line to the screen.

### **F15**

Update / Keep History. This is the same as using F8=Update, but does not delete any rule entries for contracts which have expired.

# Schedule Maintenance

## 4/VSM

The Schedule Maintenance facility allows you to maintain a schedule for an item.

*Only unreleased schedules can be maintained.*

You can release or hold any schedule and add to or amend an existing schedule quantity or date. When a schedule is released purchase orders are updated immediately, but the issue of the schedule (by paper, fax or EDI) takes place in a separate process.

## Schedule Maintenance Select Screen

Select Schedule Maintenance to display the Schedule Maintenance - Select screen.

This screen allows you to view schedules by selecting a planner code, an item or vendor. If no data is entered a blank planner code is assumed and all schedules with blank planner codes are displayed on the next screen.

```
VS090          Inventory Version 3 system test co. User GBJBAPH2    4/09/95
                                           16:37:30

Schedule Maintenance - Select

F3=Exit      F4=Prompt
  07-16      SF      MW      KS      IM      II  KENB20A  PET158S1
```

### Fields:

#### Planner

Enter a planner code to display all schedules for that planner on the next screen. A Planner code is optional and defined in the descriptions file in Inventory (TYPE=PLNR).

To see schedules irrespective of planner code enter \*ALL in the planner code field.

#### Item

Enter a valid item code to display all schedules for that item.

#### Vendor

Enter a vendor code to display all schedules for a particular vendor.

Press **Enter** to display the Schedule Maintenance Select Item screen.

## Schedule Maintenance Select Item Screen

Press **Enter** on the Schedule Maintenance Select Screen to display the Schedule Maintenance Select Item screen.

This screen allows you to select a schedule from a displayed list. The list matches the criteria entered on the Schedule Maintenance Select screen. The list displays the schedules with the highest exception error at the top, and schedules ready for release at the bottom.

This list is built one page at a time with a 'position to' on item code provided. The 'position to' does not require a valid item code.

Once a schedule has been released it will no longer appear on this list.

### Fields:

#### Sel

Select. Enter 1 against the schedule you want to view.

Press **Enter** to display the Schedule Maintenance Screen.

Enter 1 against the required schedule from the Schedule Maintenance Select Item screen to display the Schedule Maintenance screen.

You can amend the quantity allocated to breakdowns. You can also flag a schedule to release by pressing **F6=Release**.

**Fields:**

The scheduled quantity is displayed from the schedule record, and can be amended. If the value is blank, then the schedule line is deleted when **F8=Update** is pressed.

This is the three character representation of the period (i.e. FAB - Fabrication, MAT - Material, FOR - Forecast) displayed from the Company Profile.

Select **F8=Update** to update the changes made to the schedule lines on the screen. Any line quantity changes is validated against contract maximums (both contract header and contract item level). The Schedule Maintenance - Select Item screen is displayed.

**F6**

**Release:** This updates the status of the schedule so that it is released on the next auto-release run. Any changes made to the schedule delivery quantities are updated including checks on contract maximums.

**F10**

**Add Requirement.** This displays the Add Requirement window which you use to add a new requirement to the current schedule.

## Add Requirement Window (F10)

Select **F10=Add Requirement** from the Schedule Maintenance screen to display the Add Requirement window.

You use this window to add a new requirement for the current schedule.

F12=Previous

F3=Exit    F6=Release    F8=Update    F10

20-63    SF    MW    KS    IM    F21=Text    II    KENB20A    PET007S1

### Fields:

#### Required Date

The date must be a valid date on or after today's date. This is a mandatory field.

#### Quantity Required

The quantity can be any positive value. The quantity matches the unit of measure displayed in the Issue UOM field at the top of the screen. This is a mandatory field.

Select **Enter** to confirm the requirement and display the Schedule Maintenance Screen. The new line is inserted in the schedule in the correct chronological position.

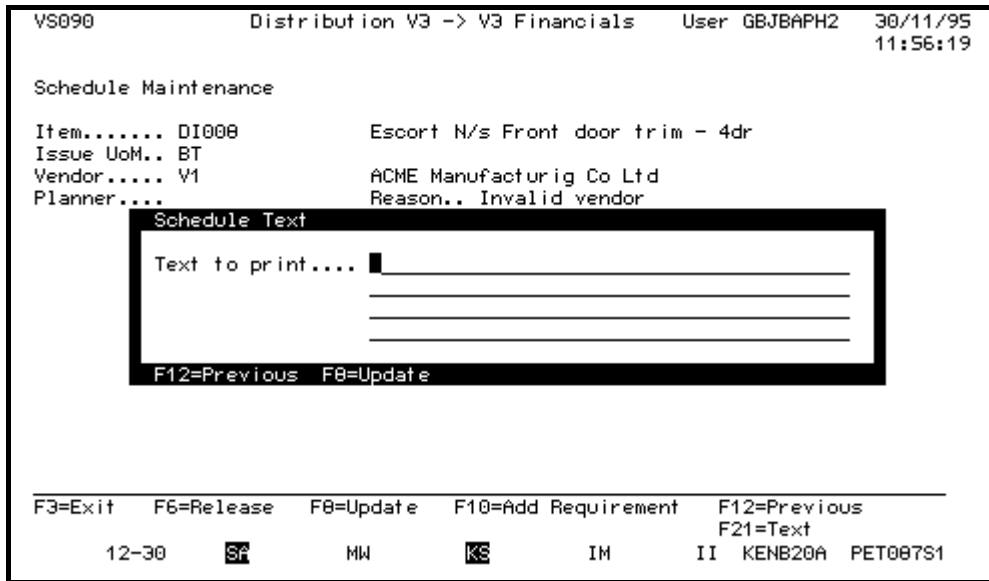

*Note: If you add a line and select F8=Update on the Schedule Maintenance screen, then a new line is written to the schedule for the requirement.*

## Schedule Maintenance Schedule Text Window (F21)

-  Select **F21=Text** from the Schedule Maintenance screen to display the Schedule Text window.

The text entered in this window is printed on the schedule during the Print / Send function. The text applies to only this schedule.

### Fields:

#### Text To Print

Enter the text you want to add to the schedule.

-  Select **F8=Update** to display the Schedule Maintenance screen.

# Contract Report

## 11/VSM

Use this option to print a report containing contract details. The report is solely to provide static information concerning contracts.

## Contract Report Screen

Select Contract Report from the menu to display the Contract Report screen.

This screen allows you to define the criteria for the contract reports. The report is in contract number order.

### Fields:

#### Contract

Enter the range of contract numbers to be included in the report. These do not have to be existing contracts numbers but indicate the start and end of a range.

When the 'to' field is blank, the system produces a list up to the last contract number. To select only one contract, enter the number in both fields.

#### Vendor

Enter the range of vendors whose contract details you wish to include in the report.

#### Purchasing Officer

Enter a valid range of purchasing officer codes whose contract details you wish to include in the report. This must either be blank, or a valid purchasing officer. An indication of the start and end of the range is not acceptable.

#### Start Date

Enter a valid date range to limit the list of contracts. Contracts with no dates defined are also listed.

#### Include Only Current Contracts

Enter one of the following:

1 - Only contracts with an end date greater than the current date are listed (this includes future contracts). This is the default.

0 - List all contracts which satisfy the criteria.

### **Type Of Run**

Enter one of the following to specify the type of report:

1 - Header information only. This is the default.

2 - Header and detail information.

3 - Header, detail and prices information.

Select **F8=Update** to print the report.

# Contract Exception Report

## 12/VSM

This report lists those contracts which are about to expire, or reach previously defined limitations. By careful selection of criteria, those contracts which are reaching the end of their life, or are close to the maximum values defined can be easily identified.

The report lists all the contracts or contract items which satisfy the exception criteria entered on the screen.

If the selection is by header, then the item column is blank. The 'maximum' column headings alter between 'Value' and 'Quantity' depending on the selection entered on the screen.

The percentage listed in the message is the actual percentage of the exception.

## Contract Exception Report Screen

Select Contract Exception Report from the menu to display the Contract Exception Report screen.

```

VS064          Distribution V3 -> V3 Financials      User GBJBAPH2      7/09/95
                                                    14:44:29

Contract exception report

Contract.....?..      From      To
Stockroom code.....?..      _      _
Item.....?..      _      _
Item group major.....?..      _      _
Item group minor.....?..      _      _
Item class.....?..      _      _
Purchasing officer.....?..      _      _
Vendor.....?..      _      _

Select on header or items..... 1 (1=header, 2=items)

Contracts due to expire within..... _ Days
Contracts cumulatives to date
Amount received greater than..... _ % of maximum
Or amount ordered greater than..... _ % of maximum

Select by quantity or value..... 0 (0=quantity, 1=value)

F3=Exit F4=Prompt F8=Submit

05-39  SF  MW  KS  IM  II  KENB20A  PET158S1
  
```

You can define the criteria for the exception report by using the following fields:

- Contract
- Stockroom Code
- Item
- Item Group Major
- Item Group Minor
- Item Class
- Purchasing Officer
- Vendor

To select only one item within each field, enter the same value in both the 'From' and 'To' fields. Leave the 'To' field blank to produce a list starting from the value entered in the 'From' field to the last one. Leave the 'From' field blank to produce a report from the start of the selection up to the value entered in the 'To' field.

Contract Number and Item code need not be valid values, but can indicate the start and end of a range. All the other entries must be valid values, defined in their respective source files in Inventory, Purchase Management or Vendor Scheduling.

*At least one of the fields must be entered to create the exception report:*

### Fields:

#### Select On Header Or Items

This flag refers to the selection criteria defined in the remaining fields described below. Enter one of the following:

- 1 - Make the selection on headers.
- 2 - Make the selection on the contract.

**Contracts Due To Expire Within**

Enter the number of days from the current date in which the contract is to expire. Any contract which will expire by this date is reported.

**Amount Received Greater Than**

Enter a percentage to select only those contracts where the cumulative amount received to date is greater than the entered percentage with respect to the maximum amount as defined on the contract.

**Amount Ordered Greater Than**

This is identical to the above parameter only using ordered as opposed to received quantities.

**Select By Quantity Or Value**

This flag indicates whether the percentages entered above are to be calculated using the cumulative quantities or values.

Tip: Only one 'Ordered' or 'Received' percentage can be entered.

Select **F8=Update** to send the selection to print.

# Multi Sourcing Rules Report

## 13/VSM

This function allows you to produce a report on multi-sourcing rules set up for particular stockroom and / or items.

## Multi Sourcing Rules Report Screen

Select Sourcing Rules Report from the menu to display the Multi-Sourcing Rules Report screen.

This screen allows you to enter the selection criteria for the Multi Sourcing Rules Report.

### Fields:

#### Demand Type

Indicate the demand type to be reported by entering one of the following:

- 1 - MRP
- 2 - MPS
- 3 - DRP
- 4 - Inventory
- 9 -\*ALL

#### Demand Point

Enter the model / centre / stockroom. Any value entered must be valid.

#### Item

Enter the items to list. Any entry does not have to be a valid entry code, but may indicate the start and end of a list.

#### Start Date Range

Enter a date range to limit the list to multi-sourcing rules which have a start date within the period entered. If entered, any value must be a valid date. Rules with no dates defined are also listed.

### Include Only Current Rules

Enter one of the following:

1 - To list only rules with an end date greater than the current date (this includes future rules). This is the default.

0 - To list all rules defined which satisfy the criteria.

Select **F8=Update** to send the report to print.  
The report lists all the multi-sourcing rules defined which satisfy the selection criteria entered on the screen.
