Chapter 2

Processing

Run Vendor Sourcing

1/VSP

This option processes all suggested supply records created by MRP, DRP, and MPS, and the requirements created from inventory re-order point processing. Multi-sourcing algorithms produce a set of suggested supplies if a vendor decision has been made (by setting the indicator on the relevant Item / Stockroom records), if not then requisitions are created as current.

Only items that have the Vendor Scheduling indicator set on the Item Stockroom file are processed by Vendor Scheduling.

These suggested supplies are then reviewed via the review / release function which later creates the purchase orders.

Run Vendor Sourcing Screen

Select Run Vendor Sourcing from the menu to display the Run Vendor Sourcing screen.

This screen allows you to specify which records you want to process.

```

VS130          Distribution V3 -> V3 Financials    User GJBAPH2    7/09/95
                                           14:25:05

Run vendor sourcing

Include Inventory suggestions.... 0 (0/1)
Include DRP suggestions..... 0 (0/1)
Include MRP suggestions..... 0 (0/1)
Include MPS suggestions..... 0 (0/1)

Last run by GJBAPH2 .....

F3=Exit  F8=Submit

00-39  SF  MW  KS  IM  II  KENB20A  PET158S1
  
```

Fields:

Include Inventory Suggestions

Enter one of the following:

0 - to not include requirements created from inventory re-order point processing.

1 - to include requirements created from inventory re-order point processing.

Include DRP Suggestions

Enter one of the following:

0 - to not include suggested supply records created by DRP.

1 - to include suggested supply records created by DRP suggestions.

Include MRP Suggestions

Enter one of the following:

0 - to not include suggested supply records created by MRP.

1 - to include suggested supply records created by MRP.

Include MPS Suggestions

Enter one of the following:

0 - to not include suggested supply records created by MPS.

1 - to include suggested supply records created by MPS.

Select **F8=Update** to submit the job. This runs vendor sourcing using the override horizons defined in the company profile.

Schedule Exception Report

5/VSP

This option allows you to list, by exception, the schedules which have been created. You can then easily identify those items which may need manual intervention prior to the scheduling being issued.

Schedule Exception Report Screen

Select Schedule Exception Report from the menu to display the Schedule Exception Report screen.

VS068		Distribution V3 -> V3 Financials		User GBJBAPH2		7/09/95	
						14:45:52	
Schedule exception report							
Contract.....?..	From		To				
Stockroom code.....?..	B990001		B990009				
Item.....?..	_____		_____				
Item group major.....?..	_____		_____				
Item group minor.....?..	_____		_____				
Item class.....?..	_____		_____				
Planner.....?..	_____		_____				
Vendor.....?..	_____		_____

Multi-sourced items report.... 0 (0/1)							
Only list items with arrears.. 0 (0/1)							
Items with deliveries before.. 7/04/95							
Sequence by..... 1 (1=Vendor/item, 2=Item/vendor)							
F3=Exit F4=Prompt F8=Submit							
06-33 SF MW KS IM II KENB20A PET158S1							

You can define the criteria for the schedule exception report by using the following fields:

- Contract
- Stockroom Code
- Item
- Item Group Major
- Item Group Minor
- Item Class
- Planner
- Vendor
- Exception Priorities

To select only one item within each field, enter the same value in both the 'From' and 'To' fields. Leave the 'To' field blank to produce a list starting from the value entered in the 'From' field to the last one. Leave the 'From' field blank to produce a report from the start of the selection up to the value entered in the 'To' field.

Contract number and item code need not be valid values, but can indicate the start and end of a range. All the other entries must be valid values, defined in their respective source files in Inventory, Purchase Management or Vendor Scheduling.

Other Limiting Factors:

At least one of the factors must be entered to create the exception report:

Multi-Sourced Items Report

Enter a 1 to limit the report to only list those items which have more than one current vendor as defined on the multi-sourced items report.

Only List Items With Arrears

Enter a 1 to limit the report to only list those items which have arrears.

Items With Deliveries Before

This defaults to 4 weeks from the current date. This can be amended. This limits the list to include only those schedules which have at least one schedule delivery on or before the date entered.

Sequence

Enter one of the following:

1 - Vendor / Item

2 - Item / Vendor

Select **F8=Update** to submit the report to print.

The period headings are either the date, the week or the calendar period as defined on the calendar. The quantities are the schedule amount which fall within the period.

The costs are calculated by multiplying the quantity by the cost displayed on the report.

Schedule Summary Report

6/VSP

This report allows you to list the created schedules in a summary format selected by particular criteria to limit the report.

Schedule Summary Report Screen

Select Schedule Summary Report from the menu to display the Schedule Summary Report screen.

This screen allows you to enter the selection criteria for the Schedule Summary Report.

```

VS070      Distribution V3 -> V3 Financials      User GBJBAPH2      4/09/95
                                                16:44:00

Sequence by..... 1 (1=Vendor/item, 2=Item/vendor)

F3=Exit  F4=Prompt  F8=Submit

05-35      SF      MW      KS      IM      II  KENB20A  PET158S1
  
```

You can define the criteria for the exception report by using the following fields:

- Contract
- Stockroom Code
- Item
- Item Group Major
- Item Group Minor
- Item Class
- Planner
- Vendor

To select only one item within each field, enter the same value in both the 'From' and 'To' fields. Leave the 'To' field blank to produce a list starting from the value entered in the 'From' field to the last one. Leave the 'From' field blank to produce a report from the start of the selection up to the value entered in the 'To' field.

Contract number and item code need not be valid values, but can indicate the start and end of a range. All the other entries must be valid values, defined in their respective source files in Inventory, Purchase Management or Vendor Scheduling.

Other Limiting Factors:

Only List Items With Arrears

Enter a 1 to limit the report to only list those items which have arrears.

Number Of Time Buckets To List.

This will default to '10'. This limits the number of 'lines' per vendor / item which appear on the report.

10 time buckets is for 'Overdue' plus 9 further buckets on 1 line.

19 is for 'Overdue' plus 18 time buckets on 2 lines,

or 'Overdue' plus 27 time buckets on 3 lines.

Schedules To Be Released By:

Enter a date to include all the schedules due for release before. This is mandatory. This will default to 7 days from the current date.

Sequence By

Enter one of the following:

1 - Vendor / Item

2 - Item / Vendor

Select **F8=Update** to submit the report to print.

The period headings are either the date, the week, or the calendar period as defined on the calendar. The quantities are the schedule amount which fall within the period.

Auto Release Schedules

10/VSP

This function allows you to release all schedules in one go and, when required, submit the print / send function to follow straight on from the release job. To enhance the capability, you can also to select ranges and status's of schedules for release. This allows, for example, the schedules to be released by each planner when they think fit.

Auto Release of Schedules Screen

Select Auto Release Schedule from the menu to display the Auto-Release of Schedules screen.

The auto-release of schedules is driven by a selection screen which you use:

- To select a range of schedules by any of the following parameters; contract number, stockroom, item, product group major, product group minor, item class, purchasing officer, planner and vendor.
- To release of schedules which are not due for issue.
- To enter an assumed release date. Schedules are released only if the elapsed days from the previous release date is beyond the number of days set up for the contract or item. If the run needs to be performed early, e.g. due to bank holidays, the assumed release date can be set to a future date.
- Produce a pre-list prior to release.
- Select print / fax / EDI options. If you select the print option along with the release then a separate screen is displayed allowing further selection and entry of 4 lines of text to be printed on the schedules. The values of the last run are used as the selection and text default.

You can define the criteria for the auto-release of schedules by entering a combination of selection ranges in this screen.

05-33	SF	MW	KS	IM	II	KENB20A PET158S1

Fields:

Contract Number

The default is from the previous value used by your user ID. This field is not validated since it is used to position on the file without needing an exact match.

Stockroom Code

The default is from the previous value used by your user ID. It must be a valid stockroom code defined in the stockroom file in inventory.

Item Code

The default is from the previous value used by your user ID. This field is not validated since it will be used to position on the file without needing an exact match.

Item Group Major

The default is from the previous value used by your user ID. It must be a code defined in the description file (TYPE=PGMJ) in inventory.

Item Group Minor

The default is from the previous value used by your user ID. It must be a code defined in the description file (TYPE=PGMN) in inventory.

Item Class

The default is from the previous value used by your user ID. It must be a code defined in the description file (TYPE=PCLS) in inventory.

Planner

The default is from the previous value used by your user ID. It must be a code defined in the description file (TYPE=PLNR) in inventory.

Vendor

The default is from the previous value used by your user ID. It is not validated since it will be used to position on the file without needing an exact match.

Assumed Release Date

The default is to the current date, allowing a manual override. The system will provide a warning message if the entered date is invalid. This is a mandatory field.

Last Released By

This shows the last time your user ID performed an auto-release and the actual and assumed dates.

Significant Changes

Reserved for future use.

Not Due For Release

This field defaults to the previous value used by your user ID. Enter one of the following:

- 0 - Do not include those not due for release
- 1 - Include those not due for release.

Type Of Run

Enter the type of run required:

- 1 - Pre-list
- 2 - Release
- 3 - Release and print.

Schedules are periodically released to the vendors. Schedules are deemed to be due for release if the 'number of days since last release date' held at the contract or item level is prior to the current date. The assumed release date can be used to override the current date, this allows an early run of schedule releases to pick up schedules due for release in the near future. This could be caused by forthcoming bank holidays.

Note: Once a schedule has been released it will be flagged and will not be picked up by a subsequent release run. Hence there will be no conflict if the selection is used within the batch processing, since past schedules are flagged during Vendor Sourcing.

Select **F8=Update** to submit the batch job. If the run selected is type 3 - release and print, then the Schedule Print and Send screen is displayed. The Planner's defaults file is updated with the last values used.

Print / Send Schedules

11/VSP

The schedule print function is a batch job that runs after Schedule Release. It picks up all the schedules which have been released either by Auto-releasing or through schedule maintenance. All schedules to be printed have updated purchase orders. Schedules which have been released are issued, except those flagged in schedule maintenance as update / not release, as, for example, the vendor may already have been contacted by phone about the schedule changes.

Schedules are issued either by printer, fax or EDI according to the setting on the contract.

The print format and bucketing, (days, weeks or periods) are defined at company profile level. The time buckets and horizons are taken into account when the schedule is printed and the bucketed quantities are stored on a schedule print history file, together with other data such as arrears at the time of printing.

To determine the time bucketing, a vendor scheduling calendar is used to define week end dates and period end dates.

Schedule Print and Send Calculations

Initially processing determines the arrears by reading through all purchase order lines, prior to the current date, by combination of vendor / item / stockroom or contract number. The cumulative YTD receipts are found from the contract item record, if a contract exists, or by reading through all the receipts in the current year.

The current week number and period number are obtained from the vendor scheduling calendar. The print format and time bucketing is determined by the company profile.

If any of the periods (Fabrication, Material, or Forecast) are in weeks or periods, then the schedule records are accumulated into totals and these values written to a new file, the schedule print history.

Print Released Schedules Screen

Select Schedule Print / Send to display the Print Released Schedules screen.

This function allows you to select ranges of schedules to print by planner or vendor. For information on how to determine which schedules are due for printing, refer to the Auto Release of Schedules screen. This selection screen also displays a text window which you use to add any free format text that you want to include on the schedule print out. All parameters on the screen, including text, default to those previously used by this planner (controlled by user ID).

Only schedules with status 6 (updated / to issue) are printed. The status of the schedule is then set to 8. This enables the system to find that last issued schedule.

Fields:

Vendor

The vendor code must be defined within the Purchase ledger. When the code is entered the vendor's name is displayed to the right of the code. When only the vendor code is entered and the vendor has more than one schedule item, then the Select Vendor Item screen is shown. When only the vendor is entered and only one schedule item exists for the vendor, then the Schedule Enquiry screen is shown which displays the latest released (or as indicated by the issue / issue date fields) schedule. This is a mandatory field.

Item Code

This must be defined within Inventory. When a code is entered, the item's description will be shown to the right of the item code. When the vendor / item combination is not a valid scheduled item for the vendor, an appropriate error message is displayed. When a valid combination is entered, the Schedule Enquiry screen is shown with the latest release (or as indicated by the issue / issue date fields) schedule. This field is optional.

Press **Enter** to continue.

Select Vendor Item Screen

-  Enter a Vendor Code on the first Schedule Enquiry screen and press Enter to display the Select Vendor Item screen.

This screen shows all schedule items against the selected vendor. The release date is the date a release was performed for the vendor / item combination.

Fields:

Sel

Select. Enter 1 in the Sel field against the required item number.

-  Enter 1 in the Sel field against the required item to display the second Schedule Enquiry screen.

Schedule Enquiry Screen 2

-  Select **Enter** on the first Schedule Enquiry screen to display the second Schedule Enquiry screen.
-  Enter 1 in the Sel field on the Select Vendor Item screen to display the second Schedule Enquiry screen.

The selected schedule for the desired vendor / item combination is shown on this screen.

The screen shows, in date sequence, all of the requirements for the selected schedule. The quantities are from the selected schedule showing each required drop and the cumulative quantity from the start of the schedule.

Send Vendor Schedules

21/VSP

Select Send Vendor Schedules to display the Send Vendor Schedules screen.

The purpose of this function is to extract vendor schedules, from the Vendor Schedules database.

The Vendor Schedules to be extracted are determined by the EDI indicator on the related Vendor Contract. Only 'released' schedules will be processed by this function. The EDI vendor schedule may be added into the EDI Mailbox send queue.

A control list may be printed, showing the schedules sent via this run.

The standard Vendor Schedule print function may also be selected. This will print all vendor schedules waiting to be sent to the suppliers, as indicated on the related vendor contracts.

This screen allows the options to be selected prior to invoking the batch function which extracts Vendor Schedule details to be sent via EDI and/or printed.

```
VSI200          Z1 - GB Demonstration Company    User GBJBANB1    4/06/98
                                                    10:17:14

Send Vendor Schedules

Add vendor schedules directly into mailbox....  1  (0=No, 1=Yes)
Control list inclusion..... 1  (1=All schedules,
                                2=Exceptions only)

-

F3=Exit      F8=Submit

MA a          MW          10/028
```

Fields:

Add Vendor Schedules Directly Into Mailbox

You can enter the following:

0 - No. Holds the extracted Vendor Schedules in the Application Interface database.

1 - Yes. Extracts and adds the Vendor Schedules into the EDI Mailbox send queue as a translated document.

Control List Inclusion

You can enter the following:

1 - All Schedules. Prints a Control List showing details of all Vendor Schedules extracted in the run which are to be sent via EDI.

2 - Exceptions Only. Prints only schedules that contain an error.

Press **F8=Submit** to submit the batch function.

This performs the following batch function for all Vendor Schedules that are 'released' and that have a contract indicating that schedules are to be sent via EDI:

- The schedule data is copied from the Vendor Schedules database into the Application Interface files.
- If the 'add to mailbox' flag is set then the schedule data will be translated into an outgoing EDI mailbox by EDI.
- A control report showing the details selected will be produced.
- The schedules copied into the Modules Interface will be updated to 'sent by EDI'.
