## Chapter 5

### Data Take-on

## Initial Data Take-on

Warehousing provides a series of routines to capture the initial stock count. Use these routines to enter, reconcile and adjust the data before you accept it. You should carry out this exercise whilst Warehousing is not processing any Inventory transactions.

You enter details that reflect the type of items you are counting. You need to enter the item, lot, rotation date, pack and quantity details. You enter counts by locations or item, and use the two routines to finely adjust the count.

Reconciliation provides a report showing count discrepancy with the Inventory balance, (when Inventory is already active). Reconciliation also identifies other data mis-matches. Run the reconciliation report without update until you have checked and verified the entered count. When you want to run the update, Warehousing produces the final report and makes the appropriate adjustments to the Inventory balances.

*Note: The Warehouse must remain inactive until you have completed the initial data take on. Deactivate the warehouse using **F14=Activate / De-Activate Warehouse** from the warehouse profile maintenance option.*

Once you have reconciled the data take-on and updated the warehouse, you must select the Data Take-on Completion option. This accurately sets the location content and fullness details used for put-away and commit processing. This then activates the warehouse.

# Location Content

## 1/WHD

Use this option to record the initial item details by location.

The initial item details include:

- Item
- Lot
- Rotation date
- Pack quantity.

This is the same information as you enter by item, but listed by location. If you want to enter the information by item, use the Item Details option.

## Data Take-on Location Contents Selection Screen

Select Location Contents.

Use this screen to select a particular location to record the item details for.

|       |                                                 |          |                      |

F3=Exit F4=Prompt

### Fields:

#### Location

Select the required location.

To display the Data Take-on Location Contents Detail Screen, press **Enter**.

## Data Take-on Location Contents Detail Screen

To display this screen, select a location on the Data Take-on Location Contents Selection Screen, and press **Enter**.

Use this screen to enter physical counts of items at the specified location.

### Fields:

#### Line

If the item has already been added, enter the line number to amend this line.

#### Item

Enter the item that has been counted. The item must have an item/warehouse profile.

#### Lot

If the item is lot, batch or serial controlled, enter the lot number.

*Note: If you have not entered the lot control information for the item, the Lot Header Maintenance Window is displayed.*

#### Rotation

If the item is rotation date controlled, enter the rotation control date.

#### Pack

Enter how the item is packed.

#### Label

If the item is stored by unique label number, enter the label number.

### Quantity

Enter the quantity in the location. This quantity should be in Inventory stockroom issue units.

Add items and press **Enter**, then select  
**F8=Update** to update the database. Then select  
**F3=Exit** to leave this screen.

## Item Details

### 2/WHD

Use this option to enter how much of each item and lot is found in each location.

The initial item details include:

- Item
- Lot
- Rotation date
- Pack quantity.

This is the same information as you enter by location, but listed by item. If you want to enter the information by location, use the Location Content option.

## Data Take-on Item Details Selection Screen

Select Item Details.

Use this screen to select the item or lot for which you want to record details.

|       |                                                 |          |                      |

**Data Take-on - Item Details**

Item.....?... 5006  
Lot.....?...

F3=Exit F4=Prompt

### Fields:

#### Item

Enter the item code.

#### Lot

If the item is lot, batch or serial controlled, then enter the lot number.

If you enter a new lot number, you must maintain the lot header details, using the Lot Header Maintenance Window before proceeding.

Press **Enter** to display the Data Take-on Item Details Screen.

## Lot Header Maintenance Window

To display this window, enter the details of a new lot on any Data Take-on Screen, and press **Enter**.

Use this window to define the availability information for any new lot or batch.

### Fields:

#### Production Date

Enter the date the lot was produced.

#### Expiry Date

Enter the date this lot expires.

#### First Available Date

Enter the date on which you can first issue this lot.

#### Last Available Date

Enter the last date on which you can issue this lot.

#### Stock Status

Select the status of this lot.

#### Reason Code

Select the reason why this lot is at this status.

#### Suppliers Lot Ref.

Enter the suppliers reference for this lot.

### Functions:

## F21

Text. Use this function to maintain text for this lot.

To save the information and return to the previous screen, press **Enter** twice.

## Data Take-on Item Details Screen

To display this screen, enter an item on the Data Take-on Item Details Selection Screen and press **Enter**.

Use this screen to enter the location and item characteristics and counted quantities.

### Fields:

#### Line

To amend a previously entered item, enter the line number and press **Enter**. The details display in the fields for you to amend.

#### Rotation

If the item is rotation date controlled, enter the appropriate date.

#### Pack

Enter how the item is packed.

#### Label

If the item is stored by unique label number, enter the label number.

#### Location

Enter the location code.

#### Quantity

Enter the quantity, in Inventory stockroom issue units.

Press **Enter** then select **F8=Update** to save the changes.

## Stock Reconciliation

There are two ways to reconcile your counted stock details with the system stock figure.

- You can choose to reconcile without update, which lets you compare figures and re-count if required until you are satisfied that your figures are correct.
- You can then choose to reconcile your counted stock details with the system stock details, effectively updating the system.

## Reconciliation Without Update

### **1...** **2...** 11/WHD

Use this option to compare the system stock figure at location, lot and item/stockroom levels with the counted details.

The reconciliation is based on the comparison of the quantities entered and the current physical stock quantities.

## Data Take On Reconciliation Report Screen

Select Reconciliation Without Update.

Use this screen to enter the selection criteria for the data take-on reconciliation.

### Fields:

#### Report Content

Enter one of the following:

1 - Detail. This provides the summary information and details of item quantities, rotation dates and pack types, by location.

2 - Summary. This provides just the summary information.

The summary report provides the following information:

- Total quantity - the recorded quantity of the item in Inventory Management.
- Entered quantity - the quantity entered during this data take-on session.
- Variance - the difference between the recorded quantity and the counted quantity entered for the item.

#### Items To Be Included On Report

Enter one of the following:

0 - To include no items on the report.

1 - To include discrepancies only.

2 - To include all items.

#### Range Of Items

Enter the range of items to be included in the reconciliation. You must have defined the entered items to Warehousing.

Leave blank for all items.

To include only one item, enter an item in the From field and leave the To field blank.

### **Report Messages**

The report may contain the following messages:

- Variance error has occurred - A discrepancy exists for the item between the counted stock and the stock recorded in Inventory Management for the stockroom.
- No Summary Data take-on records exists - No data take-on values have been entered for the item, but a quantity of stock is recorded in Inventory Management. When final reconciliation takes place, Inventory Management stock levels are adjusted to reflect the stock counted, the warning is to prevent you unintentionally entering stock levels of zero.
- No Item/warehouse profile record exists - The item has been defined to Inventory Management but does not have an equivalent item/warehouse profile, and thus cannot be processed within Warehousing.

Press **Enter** to confirm the selection and submit a batch job to produce the report.

## Reconciliation With Update

### 12/WHD

Use this option to compare the system stock figure at location, lot and item/stockroom levels with counted details.

The reconciliation is based on the comparison of quantities entered and the current physical stock quantities. If you request an update then the entered counts are used to set the initial stock position for items at the specified locations. This ensures that the sum of the items at each location in the warehouse equals the item/stockroom balance. An appropriate stock adjustment is performed.

*Note: Once you request completion you cannot further amend the items in the selected range using data take-on.*

When you have complete the items you must run the Data Take-on Completion option to update the stock levels in both Inventory Management and Warehousing.

## Data Take On Reconciliation Update Report Screen

Select Reconciliation With Update.

Use this screen to define the details of the reconciliation report and to indicate whether the data take on is complete.

### Fields:

#### Report Content

Enter one of the following:

- 1 - Detail. This provides the summary information and details of item quantities, rotation dates and pack types, by location.
- 2 - Summary. This provides just the summary information.

The summary report provides the following information:

- Total quantity - the recorded quantity of the item in Inventory Management.
- Entered quantity - the quantity entered during this data take-on session.
- Variance - the difference between the recorded quantity and the counted quantity entered for the item.

#### Items To Be Included On Report

Enter one of the following:

- 0 - To include no items on the report.
- 1 - To include discrepancies only.
- 2 - To include all items.

## Complete

Enter one of the following:

0 - No. Do not complete the data take-on. You can make further amendments to the stock count data.

1 - Yes. The data take-on is marked as complete for the items selected. You cannot make any further amendments for the selected items using the data take-on functions until you have run the Data Take-on Completion option.

## Range Of Items

Enter the range of items to include in the reconciliation. Leave both fields blank to include all items. You must have defined the items entered to the Warehouse, that is they must have an item/warehouse profile.

Press **Enter** to confirm the selection and submit a batch job to produce the report and perform the appropriate updates.

# Data Take-on Completion

## 21/WHD

Use this option to set the space available and current usage characteristics for each location. This batch job clears the data take-on files and activates the default or current warehouse.

To run the Data Take-on Completion batch job, select Data Take-on Completion.
