Chapter 6

Utilities

The Warehousing Sub System

The sub-system, in Warehousing, runs continuous programs that perform certain background tasks, such as monitoring receipts at the warehouse and preparing put-away instructions, or monitoring pick locations to detect, for example, when replenishment is required.

If you require any of the background processing tasks, the sub-system must be active. You can start the sub-system at any time of the day by entering the command: STRSBS OSLWHP3/WHBACK3.

Only end the sub-system when there are no jobs active within it. To determine if any jobs are still active in the sub-system use the command: WRKSBSJOB WHBACK3. End the active jobs using the options provided.

To end the sub-system, enter the command: ENDSBS WHBACK3.

Sub System Jobs

Receipts For Put-Away

This procedure monitors all receipts at all warehouses and prepares the put-away instructions determining the recommended location. This controls put-away for all locations but does not produce put-away labels.

Tip: If you do not use this process use the batch option Process Receipts For Put-Away.

Confirmation Updates

This procedure processes the updates required for all warehouses as a result of confirmation of put-away, move and pick. You can also do these updates interactively. You specify whether the updates are interactive or batch controlled from the warehouse profile.

Replenishment Monitor

The replenishment monitor produces requests to move stock to appropriate pick locations, for all warehouses, when the physical plus planned in stock falls below the set minimum quantity. You can control replenishment manually.

Serious Error Monitor

The serious error monitor informs the user, identified in the warehouse profile, that planned instructions were not executed accurately. The monitor, once active, processes errors for all warehouses. Similar information can be found from the Serious Error Enquiry and Serious Error Report.

Confirm Despatch Updates

This procedure processes the Inventory Management, Sales Order Processing and Sales Ledger updates necessary as a result of despatching orders. The warehouse profile determines whether you require interactive or batch updates.

Confirm Material Issue Updates

This procedure processes the Inventory Management and Production Control and Costing updates necessary as a result of issuing components for orders. The warehouse profile determines whether you require interactive or batch updates.

Authorise Users To Warehouse

1/WHU

Use this option to assign each user to a default warehouse and authorise them to any other warehouses where they work.

```

WH065                Warehousing Utilities                USER SP1                01/09/94
                                                                12:00:00

Maintain Authorised Warehouses

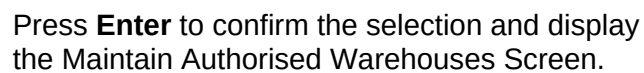

User..... SP1
Company code..... Z1

```

User

Enter the user profile ID of the user you want to authorise.

Enter the company for the warehouse you want to authorise.

Maintain Authorised Warehouses Screen

To display this screen, enter a company and user on the Maintain Authorised Warehouses User Screen and press **Enter**.

Use this screen to define the default warehouse and the warehouses the selected user can access.

WH065	Warehousing Utilities	USER SP1	01/09/94 12:00:00
Maintain Authorised Warehouses			
User.....	SP1		
Company code.....	Z1	Demonstration Company	
Default warehouse..	WH	Central Warehouse	
Auth	Warehouse	Name	
<u>1</u>	WH	Central Warehouse	
F3=Exit F5=Refresh F11=Delete F12=Previous			

Fields:

Default Warehouse

Enter the warehouse that this user normally operates within. This is the warehouse used for most Warehousing options.

Auth.

Enter 1 against all the warehouses this user is authorised to use.

Press **Enter** to save the information. Then select **F3=Exit** to leave the screen.

Serious Error Message Enquiry

2/WHU

Use this enquiry to view new error messages across all warehouses for which you are defined as the nominated user, (even across Company).

Note: The enquiry also displays automatically if you are defined as the nominated user for the warehouse you are currently processing.

The automatically displayed enquiry window shows summary information for all new serious errors written for your current Warehouse. (New errors are those which you have not yet been notified about.)

Note: The enquiry panel displays before you actually enter the selected menu option. If there are no new errors the enquiry does not display.

Serious Error Monitor Window

Select Serious Error Message Enquiry.

This window displays summary information for all new serious errors for all Warehouses for which you are the nominated user.

The details displayed are:

- Company and Warehouse
- Error
- Item
- Lot number.

Functions:

F15

Toggle Date&Time/Summary. Use this function to switch between the summary window and an extended window that shows the user, date and time of the serious error.

To return to the menu, select **F12=Previous**.

Data Deletion Movement Records

31/WHU

Use data deletion to recover disk space by removing unwanted or redundant data, such as historical records of warehouse movements.

You use this procedure to delete those movement records that are no longer required. All records up to and including the entered date are deleted.

It is advisable to re-organise the physical file for Warehouse movements.

Delete Movement Records Selection Screen

Select Movement Records (Data Deletion).

Use this screen to enter the date to use when deleting movement records.

WH550	Z1 - Demonstration Company Central Warehouse	User SP1	01/09/94 12:00:00
-------	---	----------	----------------------

Delete Movement Records

Date for deletion of movement records upto..... 01/09/94

F3=Exit F5=Refresh F8=Update

Fields:

Date

Enter a date. Only records after this date remain available for enquiry or report. This defaults to the period end date of the current period minus two months.

Select **F8=Update** to submit the batch job for processing.

Data Deletion Event/Action List Records

32/WHU

Use this procedure to delete those event and action records associated with put-away, pick and move transactions which have been completed and dated up to and including the cut-off date.

It is advisable to re-organise the physical files for events and action lists.

Delete Complete Events And Action Lists Screen

Select Event/Action List Records (Data Deletion).

Use this screen to enter the date to use when deleting complete event and action list records.

WH520	Z1 - Demonstration Company Central Warehouse	User SP1	01/09/94 12:00:00
-------	---	----------	----------------------

Delete Complete Events and Action Lists

Date for deletion of events and action lists upto..... 01/09/94

F3=Exit F5=Refresh F8=Update

Fields:

Date

Enter a date. Only records after this date remain available for enquiry and report. This defaults to the period end date of the current period minus two months.

Select **F8=Update** to submit the batch job for processing.

Location Details With Zero Balance

33/WHU

Use this procedure to delete the location detail records that have no stock balance information.

It is advisable to re-organise the location detail physical file.

To submit the batch job, select Location Details With Zero Balance (Data Deletion), then select **F8=Confirm Submit**.

Warehouse Allocation

41/WHU

Use this option to run a report which compares the Inventory allocations with the Warehouse allocations. There is limited access to this utility.

Tip: JBA recommend that you limit access to this option to one or two key users who have responsibility for the total system.

Warehouse/Inventory Reconciliation

42/WHU

Use this option to report on discrepancies, between Inventory Management and Warehousing, in physical stock at the lot, batch or serial number level.

The batch job accumulates the warehouse location balances for each item and lot, batch or serial number, then compares the balances with the corresponding inventory balance and reports any discrepancies.

You can process a single item or a range of items in report or update mode.

If you run the update mode, the batch job adjusts the items with discrepancies, such that the Inventory Management Balance is brought back inline with the accumulated Warehousing location balances. The batch job also writes stock adjustment movement records for each adjusted item.

Note: You must have exclusive use of the Warehousing company.

Warehouse/Inventory Reconciliation Screen

Select Warehouse/Inventory (Reconcile).

Use this screen to specify for which item you want to run the reconciliation and whether you want to update the records.

WH896	Z1 - UK Demonstration Company Central Warehouse	User GBJBANB4	3/03/98 14:27:59
Warehousing/Inventory Reconciliation			
Update Reconciled Qty.. 0		0=No 1=Yes	
Reporting Contents..... 1		1=Detail 2=Summary	
Items to be included on report..... 1		0=None 1=Discrepancies only 2=All	
Range of items: From?... _____ To...?... _____			
F3=Exit F4=Prompt			

Fields:

Update Reconcile Qty

Enter one of the following:

0 - No. To just run the reconciliation report.

1 - Yes. To update the items with a discrepancy. The batch job writes stock adjustment movement records for each adjusted item.

Reporting Contents

Enter one of the following:

1 - Detail. To print all location balances for each item and lot.

2 - Summary. To accumulate the location balances by item and lot.

Items To Be Included On Report

Enter one of the following:

0 - None. To include no items. Use this to update the records without printing the details.

1 - Discrepancies only. To only print items with discrepancies on the report.

2 - All. To print all items on the report.

Range Of Items

Enter the range of items you want to include on the report.

Leave this blank to include all items.

To include a single item, complete the From field and leave the To field blank.

To submit the report, press **Enter**.
