Chapter 7

Invoicing

Labour Price List Maintenance

1/WOI

Use this option to add, update and delete labour and travel rate price lists by currency. Job pricing uses the lists to determine which labour and travel charges to apply.

You record price lists against models. This is how job pricing determines which labour rate list to use.

You can enter an effective date against any price list to allow for future price increases.

Labour Price List Maintenance Screen

To display this screen, select the Labour Price List (Maintenance) option.

Use this screen to select, or enter, the labour price list you want to maintain, or create. The date, price list and currency code identify a set of hourly labour rates to use in pricing.

Fields:

Price List Code

Select a price list.

To create a price list, enter a code of up to 3 alphanumeric characters

Currency Code

Select the currency for this price list.

Effective Date

Enter a date, in DDMMYY format.

Tip: If you do not enter the effective date, all existing price lists for the selected code display, so you can select the required list.

Note: You must enter an effective date if you are creating a new price list.

To display the Labour Price List Maintenance Rates Screen, press **Enter**.

Labour Price List Maintenance Rates Screen

To display this screen, on the Labour Price List Maintenance Screen, select a price list and press **Enter**.

Use this screen to enter the rates you charge for each labour type.

Fields:

Contract Rate

Enter the hourly labour rate for jobs carried out by a field engineer and covered by a contract.

Non-Contract Rate

Enter the hourly labour rate for jobs carried out by a field engineer but not covered by a contract.

Workshop Rate

Enter the hourly labour rate for jobs carried out by a workshop engineer whether or not the equipment is on contract.

Travel Rate

Enter the hourly labour rate used to calculate the travel charge.

To save the details select **F8=Update**.

Contract Credits Maintenance

2/WOI

Use this option to view or amend contracts, invoices or pending invoices, and accept them so you can produce a part credit note, or a full credit and re-invoice. You can also discard contracts altogether from the crediting routine.

Description

The input document is the report produced by the Contract Credit Selection option.

If there is deferred income, such as in pre-paid contracts of more than one month, you can specifically enquire on the amount of deferred credit.

When you accept the calculated values, you can update the credit. You can credit the original invoice in full, and re-invoice the outstanding amount, or credit a proportion of the original invoice.

Note: For pending invoice records (this is where you have calculated the invoice price but not posted or printed it), you can only use the re-invoice option.

*Note: If you do not want to credit the invoice or pending invoice records, you can discard and remove them from the report of records selected for credit using **F11=Discard**.*

Implications

Only use the option to give a full credit against the original invoice, and reissue a new invoice, if it does not infringe local tax regulations.

The amount of deferred credit given directly mirrors the amount of deferred revenue posted from the original invoice. If you want to take the credit over a different period from the original posting periods, do this through a journal entry in the General Ledger.

Contract Credit Maintenance automatically removes pending invoices if:

- You terminate the contract early using contract maintenance so that the pending invoices are beyond the new end date.
- You select the first invoice selected for credit and action.

Note: You cannot reverse a contract invoice using the Create Sundry Credit Notes option. You can only use that option to reverse a job invoice.

After Contract Credit Maintenance, run Generate And Print Invoices to print re-invoices and credit notes. Do not run Print Sundry Invoices or Credit Notes for these credits or re-invoices.

Contract Invoice Selection Screen

To display this screen, select the Contract Credits Maintenance option.

Use this screen to select the contract and invoice you want to maintain a credit for.

13-27	SA	ML	KS IM II KENB20A PET113S1

Fields:

Contract Number

Enter the contract number to credit, using seven alphanumeric characters. This is from the contract selection report.

Contract Type

Enter the contract type for the contract.

Contract Date

Enter the date associated with the contract.

Invoice Number

Either, enter the specific invoice number, in the format I + six numerics, for the contract or, leave blank and complete the Invoice Period fields.

Currency Rate Code

If the customer requires a credit in a currency other than your base currency, enter the currency rate.

Tip: If you do not have a code set up, enter the Currency Rate and Multiply or Divide fields.

Currency Rate

Enter the rate to convert the value of the credit.

Note: If you enter a currency rate, you must complete the Multiply/Divide field.

Multiply/Divide

Enter one of the following options:

0 - Multiply. To multiply the credit value by the rate.

1 - Divide. To divide the credit value by the rate.

Invoice Period From

Enter a Date From, in the format DDMMYY.

Use the date printed on the contract credit selection report.

Invoice Period To

For pending invoices, enter a date in the format DDMMYY. Use the date printed on the contract credit selection report.

Note: You only need to complete the Invoice Period fields if you have not entered an Invoice Number.

To display the relevant Contract Credit Maintenance Prices screen, press **Enter**.

Contract Credit Maintenance Header Prices Screen

To display this screen, on the Contract Invoice Selection Screen, enter the selection details for a contract with contract header pricing and press **Enter**.

Use this screen to enter the credit details for a contract, with contract header pricing as the basis for pricing and invoicing. The amendments are at header level.

If you use contract equipment line pricing, you can select each of the machines on the invoice for editing, see Contract Credit Maintenance Line Prices Screen.

08-43	SA	MA	KS IM II KENB20A PET113S1

Fields:

Credit Dates - Requested

Enter a date to effect the value of the credit. Changing the date to the invoice start date gives a full credit for the invoice period. The default is the Contract End Date on the contract header.

Credit Dates - Actual

This is the requested credit date plus the penalty days.

Penalty

Enter the penalty days, as a value between 1 and 999. This defaults to the Termination Days field on the contract type.

Workshop Management adds the penalty days to the Credit Dates - Requested.

Note: You cannot take the penalty beyond the end of the invoice period.

Functions:

F5

Recalc. Use this function to recalculate the value of the credit and re-invoice.

F6

Currency. Use this function to override currency details for transactions where currencies are not linked to the EURO.

F8

Update - credit. Use this function to update any editing and produce a credit against the original invoice. Workshop Management writes the original invoice number to the credit note header.

This function does not display if you are editing a pending invoice.

Note: You must then generate and print contract invoices.

F9

Update - re-invoice. Use this function to update any changes and:

- For an actual invoice, produce a credit for the full amount of the original invoice, and a new invoice for the recalculated amount due. Follow up with Generate And Print (Contract) Invoices.
- For a pending invoice, produce a new pending invoice record for the recalculated amount of the invoice. Run the standard Generate And Print Invoices option for the invoice release date to produce the invoice.

F11

Discard. Use this function to reject the credit. Workshop Management returns the contract and its invoice detail to their status prior to contract credit selection.

F14

Base value Prime value. Use this function to toggle the display between base currency and prime currency.

F16

Contract Enquiry. Use this function to view the details of the contract.

F21

Internal Text. Use this function to access text from contract maintenance or enquiry.

F22

External Text. Enter up to three lines of text to print on the credit note.

To update the contract, select either **F8=Update - Credit** or **F9=Update - Re-Invoice**.

Override Conversion Parameters Window (F6)

To display this window, select **F6=Currency Override Rate** on the Contract/Invoice Selection screen.

IN currencies are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between currencies that are considered to be an IN Currency, that is defined to the Euro, will be fixed and therefore not maintainable. Selecting **F19=Currency** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

Fields:

Rate Code

Select a rate code as set up in the Currency Rate Code option within Financials.

Rate

Or. Enter a rate using up to 5 decimal places.

Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Source to Euro

This specifies whether either the source or target currencies are defined as an IN Currency, that is linked to the Euro. The detail defaults from the Euro Currencies Maintenance option within Financials and decides the Euro calculation.

0 - The currencies will be converted directly. This is not an option for member currencies of the Euro.

1 - Uses a triangulation currency conversion. This is the option for member currencies of the Euro.

Press **Enter** to apply the rate and convert the currencies.

Contract Credit Maintenance Line Prices Screen

To display this screen, on the Contract Invoice Selection Screen, enter the selection details and press **Enter**.

Use this screen to enter the credit details for a contract where you use contract equipment line pricing. You can select each machine on the invoice for editing.

If you use contract header pricing as the basis for pricing and invoicing, amendments are at header level. See Contract Credit Maintenance Header Prices Screen.

Fold/Truncate. Use this function to display extra details for each line.

F14

Base Value. Use this function to toggle between displaying values in base and prime currency.

To leave the enquiry, select **F3=Exit**.

Price Contracts

20/WOI

Use this option to find contracts due for invoicing. The contracts can be payable in advance or in arrears, and must include contract invoice terms. The batch job prices the contracts and generates pending invoice lines.

You can select contracts for a specific branch or for the company.

Use this option every time a batch of contracts needs scheduling for invoicing.

Note: You must have exclusive use of the company before running this job.

Implications

If you do not run the Price Contracts option, Workshop Management will not produce any invoices for contracts payable in advance or arrears.

If you add visits to a service-and-visits or to a service-rental-and-visits contract, after you have run the Contract Pricing option, Contract Pricing And Invoicing does not charge for the additions; you must use Job Pricing And Invoicing to charge for them, using an appropriate charge matrix.

Note: You process invoices for contracts payable by visit using the Price Jobs option.

You group invoice pending lines into invoice documents using the Generate And Print Invoices option.

Price Contracts Screen

To display the Price Contracts Screen, select the Price Contracts option.

Use this screen to specify which branch and type of billing you want to price contracts for.

SS450P	Demonstration Company CENTRAL BRANCH	USER BRERETM	30/11/93 18:19:37
--------	---	--------------	----------------------

Price Contracts

Select Branch to process..... CI (Leave blank to select all)

Type of Billing required..... 1 (1=Standard 2=Interim 3=Reconciliation)

Price Contracts with Terms Starting on or before... 1/11/93

F3=Exit F8=Submit job F12=Previous

Fields:

Select Branch To Process

Select the branch you want to price contracts for. This defaults to your current branch.

To process all branches leave this field blank.

Type Of Billing Required

Enter one of the following:

- 1 - Standard. To price all service, rental and advance copy charges.
- 2 - Interim. To price all meter-based copy charges, based on estimated or actual values, which have reached the due date for interim billing.
- 3 - Reconciliation. To price all meter-based copy charges, based on actual readings, which have reached the due date for reconciliation of metered copies.

Price Contracts With Terms Starting On Or Before

To display this field, press **Enter**.

Enter a date in DDMMYY format.

This is the contract invoice terms, not contract start dates, nor contract duration. Workshop Management only processes contracts with pricing terms due on or before the date entered.

Note: This pricing run includes all machines on a contract which you have never invoiced before, if the inclusion date for the machine is equal to or before the entered date.

To run the batch job, select **F8=Submit Job**.

Price Jobs

21/WOI

Use this option to find job lines for your branch due for invoicing, price them, and generate pending invoice lines.

Use this option every time you want to schedule a batch of jobs for invoicing.

Implications

If you do not run this option, you will not produce invoices for jobs or contracts payable per visit.

Use the Generate And Print Invoices option to group invoice pending lines into invoice documents.

The process produces a summary report. This gives the total number of jobs priced by the batch job, subtotals of the number of chargeable jobs processed, and the number of non-chargeable jobs. It then displays an analysis of how many jobs, in each status, are still in the job file after pricing is complete. To produce this information you must run pricing as a batch job.

Note: The job pricing program removes jobs from the active job files and writes them to the job history file, together with statistical data, such as the actual response times for the calls.

To run this batch job, select the Price Jobs option.

Generate And Print Invoices

22/WOI

Use this option to find the available job, contract, estimates, quotes or proforma pending invoice lines for your branch, and to produce invoices, posting them to Financials.

Use this option every time you require a new batch of invoices, or to reprint an existing invoice.

You also use this option to print the re-invoicing of contract credits, when you require credit and re-invoice, and to produce contract credit notes.

Invoice Generation

This only processes the pending invoice lines already produced by either the Price Contracts or Price Jobs options for your current branch.

The option removes pending invoice lines with an availability date less than, or equal to, the entered date from the pending invoice file, and consolidates them into invoice headers and lines.

Invoice Generation creates invoices for the contract invoice Bill To account. Whenever there is a change in contract owner within the contract details, the contract invoice prints the name and first address line of the contract owner before printing the equipment line.

You control the consolidation of pending invoice lines into invoices for the customer using the Invoice Consolidation Level field in Customer Additional Details Maintenance. You can group invoice lines by account, location, or job and contract (within currency break and VAT, GST, tax regime, if you are using World Trade and multi-currency).

If you are using the interfaces to the Sales and General Ledgers, Workshop Management automatically posts invoice values to the ledgers in the following ways:

- Workshop Management posts Sales Ledger postings directly to the Sales Ledger Open period, unless the Workshop Management Accounting period is later than that of the Sales Ledger.
- If you have Basic Financial Integrator (BFI) active, Workshop Management takes the General Ledger Account Codes, and the current accounting period to post the transactions to, from the Workshop Management Company Profile. It posts values to Debtors, Sales, Tax and Deferred Revenue accounts.
- If you have Advanced Financial Integrator (AFI) active, Workshop Management uses the account codes set in the journal conditions.

Contract Deferred Revenue Posting

Workshop Management defers the revenue (sales value), from contract invoices for contracts billed in advance, across the accounting periods covered by the invoice term.

It posts the total value of the invoices to the deferred income General Ledger account, and creates pairs of journal entries to transfer the appropriate posting values to the contract sales General Ledger account, in each accounting period within the invoice term. Workshop Management calculates the value of the journal postings for an invoice line, as follows:

- Calculates the number of deferred revenue posting days between the invoice From and To date. (The day type for the date indicates a deferred revenue posting day, as defined on the Daily Calendar File, and set in DAYT in the Codes/Parameters file).
- Divides the invoice line value by the number of deferred revenue posting days, to give a posting value per day.
- Multiplies the number of deferred revenue posting days in each accounting period, or part period, spanned by the invoice From and To dates by the value per day, to give the posting amount for the period.

Note: There is no back-deferral of revenue for advance contracts invoiced for a time period which spans previous accounting periods. In this case, Workshop Management accumulates the posting values for the previous periods into the current period.

Note: Contracts invoiced in arrears, and all job invoices, have their full invoice value posted to the current accounting period.

Invoice And Contract Credits Print

This batch job prints, in invoice number sequence, contract or job invoices generated by the previous processing and any others for which you requested a copy.

Where the contract credits procedure requires a credit note, or a credit and a re-invoice, you must take this option to print the re-invoice and all contract credit notes.

Implications

Running this option allocates invoice and contract credit note numbers, generates and prints invoices and contract credits, and generates postings for Accounts Receivable and the General Ledger.

If you never run this option, you will never produce any job or contract invoices or credit notes.

Workshop Management and the Euro

Currency rates are stored on transactions within System 21. With the introduction of the Euro and European Monetary Union (EMU) in 1999, the processing of these transactions will change.

Each time the system calculates an invoice line value from the prime currency to the base currency, the value is converted by taking into account these Euro considerations.

In a non-Euro situation the base Invoice Header Values are calculated by adding together the base invoice line goods, vat and grand totals.

In the Euro situation then the Prime Grand Total is converted to the Base Grand Total. (Using triangulation)

Note: This may mean that due to Euro roundings the invoice header base total values may not be a sum of the lines.

Generate And Print Invoices Screen

To display the Generate And Print Invoices Screen, select the Generate And Print Invoices option.

Use this screen to select the invoices you want to generate and print.

SS964	Z1 - Demonstration Company WORKSHOP BRANCH	USER GBJBATD0	8/01/98 10:31:39
Generate & Print Invoices			
Select Invoice type.....	☒ J=Job Invoicing ☐ C=Contract Invoicing ☐ E=Estimates ☐ Q=Quotes ☐ P=Proformas		
Contract Invoices to process..	☐ 0=Standard ☐ 1=Reconciliation / Interim ☐ 2=Both		
Select Run type.....	☒ 0=Actual Invoicing ☐ 1=Fictive Invoicing		
Process invoice lines due on or before.. 0/00/00			
F3=Exit F8=Submit job			

Fields:

Invoice Type

Select the invoice type.

Contract Invoices to Process

Enter one of the following:

0 - Standard. To only include standard pending invoice lines, generated by contract pricing, on the invoices.

1 - Reconciliation/Interim. To only include reconciliation and interim pending invoice lines, generated by contract pricing, on the invoices.

2 - Both. To include all pending contract invoice lines on the invoices.

Note: The actual pending invoice line selection depends on the consolidation level set on the account's Additional Service Details file and carried through to the site's record. Consolidation is also affected by currency and tax regime breaks.

Select Run Type

Enter one of the following:

0 - Actual Invoicing. To generate invoices and post the invoice details to Accounts Receivable (if installed).

1 - Fictive Invoicing. To generate invoices, but not post the invoice details.

Note: You make the actual or fictive selection in the contract header record.

Process Invoice Lines Due Date

Enter the date, in DDMMYY format, used to select invoice pending lines to convert to invoices.

When you price jobs and contracts, the priced lines have an available date to indicate when you can post these lines to the ledgers, and produce an invoice.

The run only includes lines which have not been processed before, and have an available date less than or equal to the selected date.

Note: You can also use this function to print copy invoices (for job or contract invoices) and all contract credit notes.

Note: For priced jobs the available date is set to the date they were priced. This means they are available for invoicing immediately.

For contracts priced in advance the available date is set to the start date of the invoice term or instalment period.

For contracts priced in arrears the available date is set to the end date of the invoice term or instalment period.

To start the batch job, select **F8=Submit**.

Create Sundry Invoices

23/WOI

Use this option when you need to generate a free-format sundry invoice for a customer.

You can specify the model, serial number and related contract details. These details are used to record the revenue from the sundry invoice against the correct equipment and contract. None of these details appear on the invoice.

There is no automatic pricing of any sort.

Workshop Management adds the transactions to the Accounts Receivable and General Ledger interface files as it creates the sundry invoices, and posts them to the current accounting period.

You can print the entered invoices using the Print Sundry Invoices/Credit Notes option.

Sundry Invoice Entry Screen

To display the Sundry Invoice Entry Screen,
select the Create Sundry Invoices option.

Use this screen to select the customer, currency and model details for the sundry invoice.

Fields:

No.

This is the line number and is set by Workshop Management.

Description: Lines 1 to 3

Enter up to three lines of free-form text that is printed on the sundry invoice.

VAT

Enter the VAT code, which must be defined to General Ledger.

Value VAT Value

Enter either a line value or VAT value. If you enter a VAT value, it must equal Value x VAT rate %.

Workshop Management calculates this value, when you press **Enter**, and prints it on the sundry invoice.

Functions:

F6

Currency. Use this function to override currency details for transactions where currencies are not linked to the EURO.

F21

Text. Use this function to enter and maintain the invoice header text.

Select **F8=Update** to save any changes.

Create Sundry Credit Notes

24/WOI

Use this option to enter free-format and job invoice reversal credit notes.

Use this option every time you require a free-format credit note or a job invoice reversal credit note.

Note: You cannot reverse a contract invoice using the Create Sundry Credit Notes option. You can only use this option to reverse a job invoice.

Description

You can enter two types of credit note:

- A free-format credit note - similar to the free format invoice.
- A job invoice reversal credit note, so you can fully or partially reverse an existing job invoice to produce a credit note.

For both types of credit note, you must enter a customer order reference. You must process separate inventory movements, if you require physical stock adjustments.

For a free-format credit note, enter the model or serial number and, if required, the related contract details. Workshop Management uses these for revenue reporting, to subtract the sundry credit note value from the revenue associated with the equipment and contract.

If you enter machine or contract details, then the customer must be the Bill To customer, if one exists. You cannot raise invoices or credits for the site account if Bill To overrides exist.

For a job invoice reversal credit note you enter the invoice number to reverse (or use as a base), and, optionally, a job number and technical report number from this invoice. The displayed invoice lines form the basis of the credit note. You can add, change and delete lines, as required, until the correct credit note lines are displayed, and you can complete the credit note. Because each line on the credit note has a job category, engineer, and model or serial number recorded on it, Workshop Management subtracts the credit note values from the detailed service revenue analysis figures.

Workshop Management adds the transactions to the Accounts Receivable and General Ledger interface files, as you create the sundry credit notes, and posts them to the current accounting period.

You can print the credit notes created by this option using the Print Sundry Invoices/Credit Notes option.

Credit Note Entry Screen

 To display this screen, select the Create Sundry Credit Notes option.

Use this screen select the account, or customer or model or both, for which you want to create credit notes.

Fields:

Account Number

Enter an existing customer account.

If you enter machine details, this must be the ownership account, if there is one. Otherwise, the site account will be used.

If you enter contract details, this must be either the contract bill to account or job bill to account, if one exists. Otherwise, the customer on the contract header will be used.

Account Address

Enter the address for the customer account.

Customer Order No.

Enter the authorisation for the creation of the credit note.

Original Doc Ref.

Enter the reference of any document to which this credit note may need to refer.

Invoice Number

Enter an existing job invoice number. You cannot enter a contract invoice number.

You can use this field and **F15=Invoice Reversal** to maintain the invoice lines.

The credit note is for the value of all the lines still visible on the screen.

Job Number

Enter a job number. This displays only invoice lines with this job number.

You can only enter this with an invoice number, which includes this job number, and then select **F15=Invoice Reversal**.

Technical Report No.

Enter a technical report number. This selects the invoice lines, on the entered job, with this technical report number.

You can only enter this with an invoice number and job number, which includes this technical report number, and then select **F15=Invoice Reversal**.

Model Number

Enter the machine model.

Serial Number

Enter the serial number. This must be for the entered model and on the installation record for the entered account and address codes.

Contract No.

Enter the contract number. This must be a contract for this customer and piece of equipment.

Contract Type

Enter the contract type. This must be pending or active on this contract.

Start Date

If you entered a model and serial number, enter the start date.

Currency Code

Enter the currency code. Leave blank to use the default.

Currency Rate Code

Enter the currency rate code. Leave blank to use the default.

Currency Rate

Enter the currency rate, or leave blank to use the General Ledger default value.

Multiply/Divide

If you entered a currency rate, enter one of the following:

0 - Multiply. To multiply the value by the currency rate.

1 - Divide. To divide the value by the currency rate.

Functions:

F15

Invoice Reversal. Use this function to display the Credit Notes Invoice Reversal Screen for job invoices only.

Make your selection, then press **Enter** to display the Credit Note Entry Detail Screen.

Credit Notes Invoice Reversal Screen (F15)

To display this screen, select **F15=Invoice Reversal** from the Credit Note Entry Screen.

Use this screen to maintain the invoice line details.

Tip: To enter a new invoice line, enter the details at the bottom of the screen, then select **F10=Add**.

To enter a different invoice line type, select **F14=Change Prompt**, until the type required is displayed.

4 - Delete. To delete an existing record, enter 4 against a line and press **Enter** to delete it. Select **F11=Delete** twice. The line is identified *END.

Note: There are six invoice line types and six credit note line types. The following details the

common fields and then the fields unique to each invoice line type.

Common Fields

Model

Enter the model.

Serial Number

Enter the serial number of a piece of equipment to which the credit note relates.

Engineer Number

Enter an engineer defined to Workshop Management.

VAT Code

Enter a VAT code defined to General Ledger.

VAT Value

Enter the VAT value.

If you leave this blank, Workshop Management calculates the VAT.

Job Category

Enter a job category defined to Workshop Management.

Labour Hours

Labour Time

Enter the labour hours and minutes to credit. This is not displayed for a Fixed Labour Hours override.

Rate

Enter the labour rate per hour to use in the calculation. This is not displayed for a Fixed Labour Hours override.

Value

Enter the value. This is the Labour time x Rate per hour, or the Fixed Labour override, if applicable.

Labour Type

Enter the labour type. This must be on the Codes Parameter file, parameter type LHTY. The abbreviation shows the type of labour hours used to calculate this line; for example, basic time, time and a half, or double time.

Total Value

This is the Value + VAT value.

Parts Used

Part Number

Enter a part number that is on the Inventory item file.

Quantity

Enter the number to credit.

*Note: This has no effect on physical stock levels.
You must process separate inventory
movements to adjust physical stocks.*

Unit Price

Enter the price per unit to use in the value calculation.

Value

This is the value of the line: Unit Price x Quantity.

Discount

Enter the discount for this line. You must have set a parts discount list code on the site's Additional Service Details record.

Total Value

This is the Value - Discount + VAT value.

*Note: If the discount value no longer applies,
delete the line then add a new one: You cannot
update a discount value.*

Miscellaneous Charges

Charge Type

Enter the type of miscellaneous charge to credit. This must be on the codes parameter file, parameter type CHGT.

Charge Type Description

This is the description entered in the Codes file, under parameter type CHGT, or entered during technical reporting.

Value

Enter the value of the charge to credit.

Total Value

This is the value + VAT value.

Contract Visit Fee

Value

Enter the value of the visit fee to credit.

Total Value

This is the value + VAT value.

Travel Hours

Travel Time

Enter the travel time to credit. This is not displayed for a fixed travel hours override.

Rate

Enter the rate per hour to use in the calculation. This is not displayed for a fixed travel hours override.

Value

Enter the fixed travel override. If you enter a travel time and rate this is the travel time x rate per hour.

Total value

This is the value + VAT value.

Mileage

Miles

Enter the number of actual miles or kilometres driven. This is only displayed for an actual distance driven record.

Zone Code

Enter the zone, if applicable and set up on the site's Additional Service Details. This is only displayed for a zone charge.

Value

This is the distance travelled charge: for standard distance and actual distance driven, the details are taken from the site's additional service details record; for a zone charge, it was from the zone code and the zone charge file.

Total value

This is the line value + VAT value.

Functions:

F10

Add. Use this function to add a newly entered line to the credit note.

F13

Fold/Truncate. Use this function to display extra details for the invoice lines.

F14

Chg Prompt. Use this function to change the fields displayed at the bottom of the screen so you can enter any of the other credit note line types.

F16

Job story. Use this function to maintain the job header text.

F21

Credit text. Use this function to enter text that prints on the credit note.

F22

Finish Credit. Use this function to create the credit note and post to the Accounts Receivable and General Ledger interface files.

Select **F22=Finish Credit** to complete the Credit Note. Only the invoice lines still visible on the screen, or screens, are used to create the Credit Note.

Credit Note Entry Detail Screen

To display this screen, make your selection on the Credit Note Entry Screen, and press **Enter**.

Use this screen to enter the details and values for the credit note.

Fields:

No.

This line number is maintained by Workshop Management, and determines the order to print the lines on the credit note.

Description

Enter up to three lines of free-format text. This text prints as the description on the credit note.

VAT Code

Enter a VAT code defined to General Ledger.

Value

Enter the value of the credit note line, excluding VAT. This prints out on the credit note.

VAT Value

Either enter the VAT value or leave blank and press **Enter** to let Workshop Management calculate it.

Note: You must process separate inventory movements, if you require physical stock adjustments.

Functions:

F6

Currency. Use this function to override currency details for transactions where currencies are not linked to the EURO.

F21

Text. Use this function to enter and update the credit note header text.

To save the details, select **F8=Update**.

Print Sundry Invoices/Credit Notes

25/WOI

Use this option to print previously entered sundry invoices and credit notes.

Select this option every time you want to print, or re-print, sundry invoices or credit notes.

Note: Use the Generate And Print Invoices option to print contract credit notes.

The option submits a batch job to print sundry invoices and credit notes which you have either entered but not yet printed, or requested for reprint using the Request Copy Document option.

To run the batch job, select Print Sundry Invoices/Credit Notes.

Request Copy Document

26/WOI

Use this option to reprint documentation which was lost or damaged during printing.

You can reprint:

- Invoices.
- Credit Notes.
- Estimates.
- Quotations.
- Proformas.

Request Copy Document Selection Screen

To display this screen, select the Request Copy Document option.

Use this screen to select the document you want to reprint.

						100.00 %
VAT Code.?: 001 Standard rate VAT						
Currency...: GBP Pounds Sterling						
F4=Prompt F5=Refresh F12=Previous						

Fields:

Line Value

Enter the new line value if required.

*Note: You can only amend the first HR line per
technical report. The detail displayed is always
the first HR line you can change.*

VAT Code

Enter the new VAT code, if required.

Hourly Rate/Parts Price

Enter the new job pricing value, if required.

The appropriate hourly rate is extracted from the Labour Price List file.

The parts price is from the (SOP) parts price list specified in the site's Additional
Details file.

Hours/Misc Charge Type/Part Number

Enter the job pricing value, if required. You cannot change the part number. The data is taken from the engineer's technical report.

You set up Miscellaneous Charge Type codes in the Codes Parameter File Maintenance option, under parameter type CHGT.

Hours Type Code/Parts Quantity Used

Enter the job pricing value, if required. The details are taken from the engineer's technical report.

You set up hours type codes in the Codes Parameter File Maintenance option, under parameter type LHTY. If you change the hours type code to a code that already exists on the job, you must consolidate the hours or line value within one record; the second, identical hours type record must be zeroed. Do not leave the second record; Workshop Management ignores it for invoicing.

Parts Quantity Used (Cont)

Enter the job pricing value, if required. The details are taken from the engineer's technical report - parts used.

Select **F8=Update** to save any changes.

Generate Estimates

30/WOI

This option submits a batch job that calculates estimated invoices for a particular branch or for all branches. The batch job looks at all metered machines on meterage type contracts - that is, with interim, or reconciliation billing cycles, or both.

If the contract billing parameters have an interim or reconciliation billing term which ends before or on the date specified, and no estimates already exist, then this generates estimates for all metered machines on that contract.

The batch job does not produce a report, but writes the details to file.

Workshop Management calculates estimates based on available historical information. If no historical information is available, Workshop Management uses either the minimum volume specified on the contract, or the average usage for the model from the volume segment information.

Estimate Generation Request Screen

Select the Generate Estimates option to display the Estimate Generation Request Screen.

Use this screen to select the branch, and date for which you want to create invoices.

Fields:

Reason For Override

Enter the reason the meter reading was overridden.

A common reason is when a meter rolls over from 99999 to 00000, so the entered reading is less than the previous one. There is a system-defined reason code for this. This triggers special processing in other parts of the system.

You define your own reason codes in the Codes Parameter File Maintenance option under type MROV, and you can specify whether these are roll over codes.

When you have entered the reason, select **F8=Confirm**.

Enter Service Readings

40/WOI

Although you can enter meter readings as part of an engineer's technical report, that assumes that there is an outstanding job for the machine.

If a machine has no outstanding job but still requires a reading, then you can enter meter readings via this option and the enter meter reading option.

Meter Reading Entry

Serial Number.....          Model...?. S-01█

Contract Number...?.          Type...   Date... 0/00/00

F3=Exit  F4=Prompt

05-57    S2    MW    KS    IM    II    KENB20A  PET178S2
```

Fields:

Serial Number

Enter the serial number of the model.

Model

Enter the model for which you want to enter meter readings.

Tip: Enter the model, leave the serial number blank, and then press **Enter**, to display a list of possible serial numbers. If the contract is also blank, then a list of possible contracts is also displayed. Select a model or contract or both with option 1.

Contract Number

Enter the contract for which the meter reading is made.

Type

Enter the contract type.

Date

Enter the contract date.

Enter the selection criteria and press **Enter** to display the Service Meter Reading Entry Detail Screen.

Service Meter Reading Entry Details Screen

To display this screen, enter the selection criteria and press **Enter** on the Service Meter Reading Entry Selection Screen.

Use this screen to enter the service details, meter reading and reading type.

16-24	SA	MA	KS IM II KENB20A PET178S2

Fields:

Meter Reading Date

Enter the date the reading or readings were taken.

Meter 1 Reading

Enter the meter reading.

Service Job Number

Enter the job number.

Meter 2 Reading

Enter the reading for the second meter, if relevant.

Meter Reading Type

Enter one of the following:

1 - Initial. If this reading is the initial reading. You can only enter one initial reading for a machine, and you cannot enter it if any readings already exist for that machine.

2 - Service. If this reading was taken by an engineer during servicing.

9 - Final. If this is a final reading. The date must be later than that of the last reading, and later than or equal to the machine termination date.

Functions:

F16

Meter History. Use this function to display a list of past readings for the machine on the Meter Reading History Screen.

Press **Enter** to save the entered information.

Credit Assessment Maintenance

40/WOI

Use this option to assess the credit rating for customers requiring credit. You can set a flag to indicate that customers require credit at any stage during the life cycle of the job.

You can view all items with the Credit Assessment flag set to 1 - Credit Required.

If you agree to a credit, you must enter the value. Workshop Management defaults this value to either the sale price of a selected invoice, or the current trade price for the customer. You can change this value.

Any items you mark for acceptance have the Credit Assessment flag set to 2 - Credit Proposed. You use the Proposed Credit Summary Print option to print all these items. Once they are printed the Credit Assessment flag is set to 3 - Credit Authorisation Printed.

Once you have printed the report, use this option to set any items with a credit rating of 3 to either 4 - Credit Authorised, or 8 - Credit Refusal Proposed, or 1 - Credit Required to start the process again.

You can then print all the items with a Credit Assessment flag of 8 - Credit Refusal Proposed. Once they are printed the Credit Assessment flag is set to 9 - Credit Refused.

Note: You should only externally despatch items with a Credit Assessment flag of 0 or 9 - Credit Refused.

Credit Assessment Maintenance Selection Screen

To display this screen, select the Credit Assessment Maintenance option.

Use this screen to select the customer or job for which you want to perform credit assessment.

F16=Price list F23=More Options			

Fields:

Credit Accepted By

Enter the person who accepted the credit using 20 alphanumeric characters.

Date

Enter the date the credit was accepted or rejected.

Cr

Credit Status. Enter one of the following:

0 - Credit N/A. If credit is not applicable to this job.

1 - Credit required.

2 - Proposed credit.

4 - Credit authorised.

8 - Credit Refused.

D - Details. To display the Job Details Maintenance Screen so you can change the job action.

H - History. To display the Job History Enquiry for the machine.

Reason Code

Select the reason for the change in credit type.

Account

If the credit status is set to 4 - Credit Authorised, enter the new customer or location or both to raise the SOP credit against. This customer cannot be set up as a cash customer on the Service Additional Details file.

Price

If the credit status is set to 2 - Credit Proposed or 4 - Credit Authorised, enter the price of the job.

Functions:

F8

Update. This updates all job lines you have changed, with Credit Status set to:

0 or 1 - Updates the Credit Assessment flag and reason code.

2 - Saves the Credit Assessment flag, reason code, price and new batch number on the job line file.

4 - Raises the SOP credit against the entered customer, updates the Paid, Estimate and Customer Collection flags so you can despatch the equipment and transfers ownership of the equipment to the workshop specific account held on the branch file and receives the item into the branch stockroom.

8 - Updates the Credit Assessment flag and reason code on the job line and prints a Credit Refusal Report detailing all the jobs for which you have refused credit.

F14

SOP Enquiry. Use this function to display the SOP Order Enquiry so you can enter the SOP order number and customer order number.

F16

Price List. Use this function to display the SOP Price List Enquiry for the customers price list, entered on the Customer Additional Details File.

Select **F8=Update** to save any changes and print the Credit Refusal Report.

Proposed Credit Summary Print

41/WOI

Use this batch job to print a credit authorisation document for all the jobs that currently have a credit assessment of 2 - Credit Proposed. You set this using the Credit Assessment Maintenance option.

This report prints the job number and category, model, customer details, who proposed the credit, credit reason and price.

Once the jobs are printed, this batch job sets the credit status to 3 - Credit Authorisation Printed.

To print the credit authorisation documents, select the Proposed Credit Summary Print option. Then select **F8=Confirm Submit** to submit the batch job.

Contract Audit Report

50/WOI

Use this report to check that all contracts eligible for billing have been billed. You do not need to enquire on each individual contract.

The report lists any unbilled contracts, with their start date, attached models and serial numbers, and other details.

Contract Audit Report Screen

- Select the Contract Audit Report option to display the Contract Audit Report Screen.

Use this screen to enter the date to select equipment that has not been invoiced.
