Chapter 2

Production Order Enquiries And Reports

Order Enquiry

1/PCE

The main aims of this task are to:

- Review order by status, item or user reference
- Display the order header details
- Display summaries and details or material issues, operation bookings and finished goods receipts

Orders can be selected for enquiry:

- By entering a particular production order number
- From an order review, based on order status, user reference field and status, or end item and status for a specified due date range
- From a list of all orders for a specified due date range

Note: Orders Due From and Orders Due To fields default to the current system date.

When Orders Enquiry is selected on the Production Order Enquiries And Reports menu, the first Production Order Enquiry screen is displayed.

Production Order Enquiry Screen 1

When Orders Enquiry is selected on the Production Order Enquiries And Reports menu, the first Production Order Enquiry screen is displayed.

F3=Exit F4=Prompt F14=By Order F15=By Reference F16=By Item			
05-26 MW KS IM II KENB20A PET166S2			

Orders can be selected in one of the following ways:

Enter an order number and, ignoring the settings in all other fields, press **Enter** to display the order header details.

OR

Complete the fields and use the appropriate function key to display a list of orders, from which an individual order can be selected to display further details if required.

F14=By Order

Enter 1 against one or more status categories to include all orders of that status in the review and use **F14=By Order** to display those orders. Item and Reference fields must not be blank.

F15=By Reference

Selections may be further restricted by specifying any reference which may be held on the order header as well as status code(s) and using **F15=By Reference** to display only orders with that reference/status combination. Order and Item fields must be left blank.

F16=By Item

Selections may be further restricted by specifying an item code as well as status code(s) and using **F16=By Item** to display only orders with that reference/status combination. Order and Reference fields must be left blank.

AND

Select a range of due dates.

Note: The defaults in both fields is the current dates.

Functions:

F14

By Order.

F15

By Reference.

F16

By Item.

Whichever function key is used the Production Order Selection screen is displayed together with the selected orders as determined by the selection parameters entered.

Production Order Selection Screen (F14, F15, F16)

When **F14=By Order**, **F15=By Reference** or **F16=By Item** is selected on the first Production Order Enquiry screen, the Production Order Selection screen is displayed.

Archived Order Enquiry

1... 2... 2/PCE

Completed orders may be archived with various options for data retention being set in the company profile. These archived orders are not available in the normal order enquiry and reporting facilities in Production Control.

Note: Cancelled orders are not archived, but are deleted from the system during archiving routines, if within the selected date range.

If detailed data has been retained at archiving time, this task enables detailed enquiries to be made on archived orders. Order header information is always archived and available for review.

When Archived Orders Enquiries is selected on the Production Order Enquiries And Reports menu, the Production Order Enquiry screen is displayed.

Enter the order number on which you wish to enquire and press **Enter** to go straight to the order header details display; or use **F14=By Order** to display a list of all archived orders, from which orders may be selected for inspection; or enter an order Reference and use **F15=By Reference** to display a list of all orders with the selected reference; enter an Item number and use **F16=By Item** to display a list of all orders for the selected item.

Note: Orders Due From and Orders Due To default to the current system date.

If details are held against each order, the function keys for materials, operations and finished goods receipts are available when an order is selected.

Production Input Requirement

3/PCE

This task enables you to display confirmed, released and active production orders which have a requirement for a specified input. In addition, the balances at each of the input stockrooms may also be displayed. This function allows you to identify orders which require a particular input. This is useful where you may wish to withdraw or change the input or where a problem in obtaining the input has arisen.

When Production Input Requirements Enquiries is selected on the Production Order Enquiries And Reports menu, the first Production Input Requirements screen is displayed.

Production Input Requirements Screen 1

When Production Input Requirements Enquiries is selected on the Production Order Enquiries And Reports menu, the first Production Input Requirements screen is displayed.

Fields:

Input

Enter the item to establish its usage in production orders.

Requirement From

Inputs are shown if their requirement date is greater than or equal to the date entered. If no date is entered, the program assumes the current date.

Requirements To

Inputs are shown if their requirement date is less than or equal to the date entered. If no date is entered, the program assumes an infinite horizon.

When **Enter** is pressed on the first Production Input Requirements screen, the second screen is displayed.

Production Input Requirements Screen 2

 When **Enter** is pressed on the first Production Input Requirements screen, the second screen is displayed.

This screen displays the production orders associated with the selected input.

Fields:

O

Option.

1 - Select Order. The third Material Availability Enquiry screen is displayed containing the inputs to the order.

2 - Order Text. To display order header text.

Status

Order Status. The status can be, for example, CON for confirmed, RLS for released, ACT for active.

Type

Order Type.

1 - For standard and amended standard.

2 - For non-standard.

Route

This is the code of the route used to generate order details.

Start

The scheduled start date.

Due

The scheduled due date.

Material Availability Enquiry Screen 3 (Option 1)

When 1 is entered in an O field on the second Material Availability Enquiry screen, the third screen is displayed.

The screen displays order/route details at the top and input details at the bottom.

```

```

Fields:

O

Option.

1 - Select Material. The fourth screen is displayed.

2 - Operation Text.

Qty Reqd

This is the quantity required of this input for the operation.

Qty On Hand

For planned and confirmed orders on a route this shows available stock in the issuing stockroom or all stockrooms depending on the setting of **F15=All Stores**. For released and active orders this shows the physical balance (quantity on hand) in the issuing stockroom or all stockrooms depending on the setting of **F15=All Stores**.

In either case if the **F17=Allocate To Trial Kit** is taken the stock available balance is temporarily reduced. By selecting several orders in succession and taking **F17=Allocate To Trial Kit** for each, this stock reduction continues until **F3=Exit** is taken. No actual stock movement takes place as a result of allocating to trial kit - it is merely a simulation exercise.

Two stars (**) against a quantity indicates there is insufficient stock to meet the requirement.

Functions:

F15

All Stores. Toggles between displaying input stock balances in the issuing stockroom and in all stockrooms.

F17

Allocate To Trial Kit. Uses the input requirements on display to temporarily increment the allocated trial kit totals for the inputs. This means that several orders may be trial kitted in order to assess the effect of releasing a series of orders.

Material Availability Enquiry Screen 4 (Option 1)

When 1 is entered in the O field on the third Material Availability Enquiry screen, the fourth screen is displayed.

This screen shows details from the stockroom record in Inventory. The trial kit quantity notionally allocated to this order may be viewed if this option is taken following the use of **F17=Allocate To Trial Kit** on the third screen.

Work Station Production List

5/PCE

This enquiry enables you to view the operations currently scheduled to run at a particular work station. The operations are listed in priority order and in due date order within each priority level. By using this enquiry, shop floor schedules can be manipulated in the following ways:

- The priority of uncompleted operations may be changed
- Operations which are released but not yet active can be switched to other work stations

It is also possible to view a summary display showing the current status and current job at each work station.

When Work Station Production List Enquiries is selected on the Production Order Enquiries And Reports menu, the first Work Station Production List screen is displayed.

Work Station Production List Screen 1

When Work Station Production List Enquiries is selected on the Production Order Enquiries And Reports menu, the first Work Station Production List screen is displayed.

This screen enables you to select the work and restrict the operations that you wish to see.

Work Station

Enter the work station which you wish to enquire upon.

Include Operation Starting By

Enter a date or leave blank. If a date is specified, only those operators with a start date on or after the entered date is included in the enquiry. If no date is specified, all operations are included.

Include Operation Status

To include operations of a particular status, place a 1 against them. Any combination of confirmed, released and/or active operations may be included.

Work Station Production List Screen 2

This screen displays a list of all work stations selected in the review. The following details are displayed.

Fields:

Last Recorded Order/Operation

The current production order number and operation sequence running at this station. For work stations where there are schedules in operation the operation number and status are displayed.

Status

This field is set by the last operation booking made at the work station:

Inactive - can indicate that the latest booking was the completion of maintenance or set-up procedures or completion of an entire operation.

Set-up - indicates that the latest booking was the starting of a set-up procedure.

Running - indicates that the latest booking was a starting of job or partial completion booking.

Down - indicates that the latest booking was the starting of work station maintenance.

Tip: If text exists against a work station, this is indicated by an asterisk (*) to the left of the work details. The text for a particular work station can be viewed or amended by placing a 2 against the station required.

Work Station Production List Screen 3 (Option 1)

When 1 is entered in the O field on the second Work Station Production List screen, the third screen is displayed.

The screen is displayed containing operations in due date within priority order for the selected station.

F3=Exit F4=Review Work Station F12=Previous			
11-02	52	MW	KS IM II KENB20A PET166S2

Fields:

Std. Efficiency

Standard efficiency is defined in the work station master file and does not directly affect the load or scheduling. It may be used in the Capacity Requirements Planning application.

Av. Efficiency

Not used. Awaiting future development.

Tip: The remainder of the screen lists the operations currently running or schedules to be performed at this work station. The following details are displayed for each operation:

O

Option.

1- Select. This reviews a selected operation. The fourth Work Station Production List screen is displayed containing the selected operation.

2 - Operation Text. If text exists against an operation, this is indicated by an asterisk (*) to the left of the operation details. The text for a particular operation can be viewed or amended by placing a 2 against the station required.

Pty

Priority. This defaults to the value set in the company profile but may be changed under certain conditions by selecting the operation for review. Priority must be between 0 (highest) and 9 (lowest).

Start

The earliest date at which the operation is due to start.

Qty Sched

The quantity scheduled for this operation, allowing for shrinkage i.e. the amount of work to be performed to produce the required order quantity.

Quantity O/S

The quantity yet to be completed during this operation.

Op. Status

This field is determined by work to be completed during this operation:

Not Arrived - this operation has not yet had any bookings made against it, i.e. the order is still at an earlier operation.

Str/Fin Set - setting has been started or completed.

Str/Fin Main - maintenance has been started or completed.

Running - a start of job or partial completion booking as been made.

Complete - the operation has been booked as completed.

Ready - confirmed or released order which is not yet active.

Work Station Production List Screen 4 (Option 1)

When 1 is entered in the O field on the third Work Station Production List screen, the fourth screen is displayed.

This screen contains the details of the selected operation. Additional fields are displayed, as follows:

PC016	Z1 - GB Demonstration Company	USER GBJBAMS	8/12/95 17:00:50

Fields:

Earliest Start

The earliest date and week at which the operation is due to start.

Latest Start

The recorded operation start date and week, if the operation has started, or the start date as determined by back scheduling from the due date and week, if the operation has not begun.

Due Finish

The scheduled date and week of completion.

Tip: If the due date is prior to today's date
Overdue also appears alongside the start
date and due dates.

Change Priority To

Allows you to change the running priority, but only if work has not yet started, of the operation at this work station; the range is 0 (highest) to 9 (lowest).

Move To Work Station

Allows you to transfer the operation to another work station for orders with a status of confirmed or released but only if work has not yet started.

Production Batch Balance Enquiry

1...
2...

6/PCE

This option is used to make enquires on Lot Balancing for process group items.

Enquiries can be made on orders which use batch balancing.

When Production Batch Balancing Enquiries is selected on the Production Order Enquiries And Reports menu, the Production Batch Balancing screen is displayed.

Enter the order number required in the Production Order Number field. The Lot Balancing window is displayed. Enter 1 to display the Potent Lot Window This window is the same as the window displayed in Order release except you cannot enter a number in the X field, and there is no **F18=Display Qty Started**.

Fields:

Organisational Model

Enter the live Organisational Model.

Subcontractor Work Station From/To

This report considers production that is due to be completed by a certain date. Such planning details are held for each work station in terms of its firmed work load. The work station referenced is that defined for the parent item route at the subcontracted operation. This range allows the report to be restricted to a range of work stations. A work station might be an on-site reference, or could be used to indicate a specific subcontractor or group of subcontractors. Leave blank to include all work stations.

Shipping Date

Enter the date for which the schedule is to be drawn up; this is the date on which WIP is destined to be shipped to the subcontractor and this sets another selection restriction when taking information from the work station loading details.

Include Material In Schedule

Input requirements may be included or excluded from the report.

Enter 1 for the report to include details on the inputs that are shipped with the WIP for absorption into the subcontract work. Leave blank to keep the report at its briefest, detailing the subcontract details, both planned and outstanding.

Order Range

Enter a production order number range to restrict the schedule to requirements of specific orders only. Leave blank to include all orders.

Press **Enter** to submit job.

Subcontract Shipper Notes

1... **12/PCE**
2...

1... **32/MKS**
2...

This report provides a document to despatch with materials and WIP to the subcontractor.

When Shipper Notes is selected on the Production Order Enquiries And Report menu or the Production Schedule Control menu, the Subcontract Shipper Print screen is displayed.

Fields:

Organisational Model

Enter the live Organisational Model.

WIP Location Range

Enter a WIP location range to only include transactions associated with the specified location(s); leave blank to include all transactions. The WIP locations are those from which WIP inventory is to be shipped; that is, the location assigned to the work station for the count point operation prior to the subcontracted operation.

Subcontractor

If shipping despatches are to be limited to a specific subcontractor, enter the code here. The code entered is validated against the vendor codes in Accounts Payable.

Shipper Number

If the shipper (despatch) note is to relate to a specific subcontracted despatch, enter the shipper number raised against this despatch via the Subcontract WIP Shipper or Subcontract Material Shipper facilities.

The entry is validated against the data held for subcontractor transactions.

Shipper Form

Indicates whether the shipper (despatch) note is to be output to pre-printed stationery, or plain paper.

0 - To print on plain paper, headings, titles, quantities and numbers are included.

1 - To print on pre-printed stationery, only quantities and numbers are printed.

Reprint

Indicates whether or not the document has been printed before.

0 - To print for the first time.

1 - To reprint a document.

Press **Enter** to validate entries and **F8=Submit Job** to submit the job.

Subcontract Stock Report

1... 13/PCE
2...

1... 33/MKS
2...

This report provides details of items held at subcontractors.

When Stock Report is selected on the Production Order Enquiries And Reports menu or the Production Schedule Control menu, the Subcontract Stock Status Report screen is displayed.

```

Fields:

Organisational Model

Enter the live Organisational Model.

WIP Location Range

Enter a WIP location range to only include inventory associated with the specified location(s); leave blank to include all inventory.

The WIP locations are those at which WIP inventory is recorded; that is the location assigned to the work station for the operation prior to the subcontracted operation.

Subcontractor

If inventory status is to be restricted to a specific subcontractor, enter the code here. The code entered is validated against the vendor codes held in Accounts payable.

Item Number Range

This sets the limit for items to be included on the report.

Operation Sequence

Enter an operation sequence at which the WIP stock is shipped to the subcontractor(s).

Include Valuation

Indicates if the report should include the value of inventory at the subcontractor.

0 - To suppress the printing of material and WIP inventory values.

1 - To print values. The General Cost Recovery flag on the Organisational Model screen needs to be set to 1 (yes) for the system to have the cost accounting data required to provide a valuation on WIP inventory. Standard costs for Production are used, and includes shrinkage if the Include Shrinkage in Reports flag on the company profile is set to 1 (yes).

Inventory materials shipped to subcontractors are valued at their Inventory stock value.

Include Shipper Details

Defaults to 0 if the Shipper Tracking flag is set to 0 or 2, otherwise, if the tracking flag is set to 1 or 3 the default is 1. This code is set on the Organisational Model.

0 - To suppress the printing of shipper details.

1 - To include shipper details on the report. Details printed include: shipper numbers, shipped quantities, received quantities, due dates, production order and order line numbers, and the status of the shipment.

Include Receipts Details

Indicates if receipts from subcontractors should be printed.

0 - To suppress printing of receipt details.

1 - Receipt details are to be included on the report. The additional details printed are the advice note numbers, receipt dates and quantities.

Sequence

1 - To sequence by subcontractor, item/operation, with valuation if requested, and shipper details/associated receipt details if these are to be included.

2 - To sequence by order by item/operation, naming any subcontractor holding the item, with the value of the holding if requested, and shipper details/associated receipt details of these are to be included.

Subcontract Receipts Schedule

1... 14/PCE
2...

1... 34/MKS
2...

This report provides an audit listing of receipts from subcontractors.

When Receipts Schedule is selected on the Production Order Enquiries And Reports menu or the Production Schedule Control menu, the Subcontractor Receipts Schedule Report Selection screen is displayed.

```

Fields:

Report Sequence

This field determines the sequence of the orders on the report.

- 1 - By Item. To print the report in finished item sequence.
- 2 - By Order. To print the report in production order sequence.

Finished Item

Enter the range of finished items required or leave blank for all items.

Order Number

Enter the range of order numbers required or leave blank for all orders.

Include Order Status

Select one or more order status categories to be included in the report.

Material Availability

22/PCE

The purpose of this report is to show the effect of production order input requirements on stock levels. If automatic issue of inputs is taken on order release, this reports should be run to determine if any stocks have become negative.

When Material Availability Reports is selected on the Production Order Enquiries And Reports menu, the Material Availability Report screen is displayed.

PC031	Z1 - GB Demonstration Company	USER GBJBAMS	8/12/95

05-37 S2 MW KS IM II KENB20A PET166S2			

Fields:

Report Sequence

This field determines the sequence of the items on the report.

- 1 - To sequence by operation start date.
- 2 - To sequence by order start date.
- 3 - To sequence by order number.

Input Item From/To

Enter the range of inputs required or leave blank for all inputs to be included.

Order Number From/To

Enter the range of order numbers required for inclusion in the report or leave blank for all orders.

Order Status

Enter a 1 against each order type to be included. Planned, confirmed and/or released orders can be included in any combination.

Include Issuing Stockroom Only

This field determines whether all stockrooms should be considered when calculating requirement shortages, or restricted to the issuing stockroom.

0 - To show all stockroom balances for the selected items.

1 - To show only the issuing stockroom balance.

Print Shortages Only

This field determines whether all items are reported upon, or only those where a shortage in available stock has been identified.

0 - To show both excess availability and shortages.

1 - To include shortages only.

Include Up To Start Date

Enter a cut off date to limit the orders included in the report. Only orders with an earliest start date before the date entered is included.

When all necessary details have been completed, press **Enter** to run the report.

Work Station Production List

23/PCE

The purpose of this report is to show all work outstanding at a given work station. It is the printed equivalent of the Work Station Loading enquiry.

When Work Station Productions List Reports is selected on the Production Order Enquiries And Reports menu, the Work Station Production List - Report Selection screen is displayed.

```
PC038                Z1 - GB Demonstration Company        USER GBJBAMS      8/12/95

```

Fields:

Latest Operation Start Date

Enter the latest operation start date that you wish to review or leave blank for all operations.

From Work Station To Work Station

Enter the range of work stations that you wish to review or leave blank for all work stations.

Include Order Status

Enter a 1 next to the Order Status Values that you wish to include in the report.

When all necessary details have been completed, press **Enter** to run the report.

WIP Valuation

24/PCE

This report is for future development.

Material Yield Report

25/PCE

This report calculates the ratio of inputs to outputs on a route for a process group.

The yield of a process is defined as (output quantity/input quantity) x 100 to give a percentage. A process is defined as an activity or series of activities that convert inputs to outputs. Standard yield is the standard output quantity of an item on a route as a percentage of the total of the standard input quantities of items defined as yield items. Items considered for inclusion in the calculation must be designated as yield items via Production Details, Additional Parameters window (**F18**).

When Material Yield Reports is selected on the Production Order Enquiries And Reports menu, the Production Yield Variance Report Selection - Standard Vs Actual screen is displayed.

Fields:

Work Station Range

Enter a work station range or leave blank to include all work stations.

Input Item Range

Enter an input item range or leave blank to include all inputs.

Output Item Range

Enter an output item range or leave blank to include all outputs.

Date Range

Enter a date range.

Note: The date range fields default to the current system date.

Material Standard Cost

Indicate whether you require valuation at production 1 or Inventory Management 2 standard costs.

Outputs Summary Report

Indicate whether or not an outputs summary report is required.

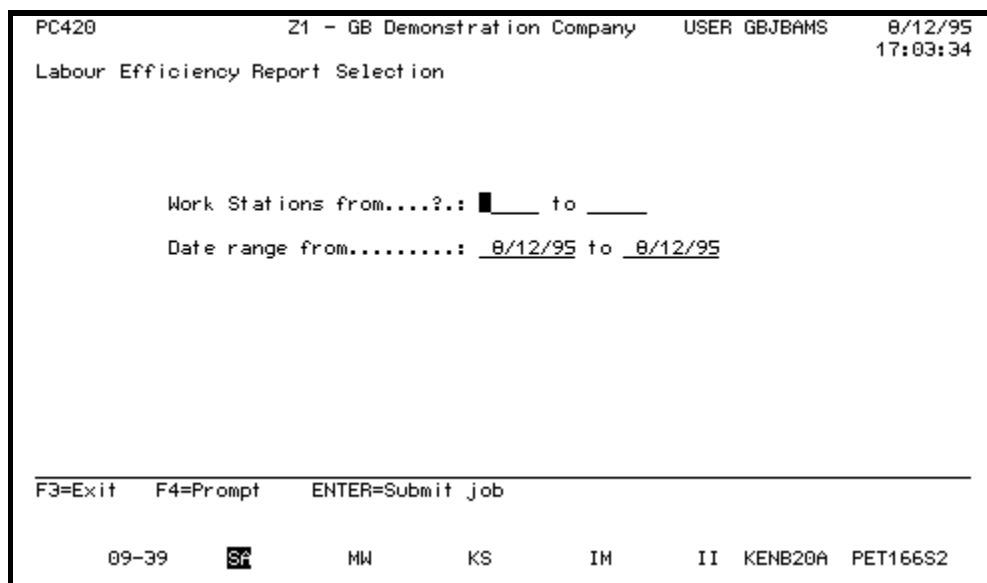

Labour Efficiency Report

26/PCE

This report calculates the efficiency of the labour bookings by measuring actual against standard. Labour efficiency equals earned standard hours/actual hours worked.

When Labour Efficiency Reports is selected on the Production Order Enquiries And Reports menu, the Labour Efficiency Report Selection screen is displayed.

```

Fields:

Work Station Range

The From and To fields enable you to restrict the work stations included in the report to those that fall within the specified range. Leave both fields blank to select all work stations.

Date Range

Enter an appropriate date range.

Note: The date fields default to the current system date.

Output Item/Group

Select a specific item or process group range to report on, or leave blank to select all items.

Include Order Status

This flag determines whether orders with a status of Active and/or Complete are included in the report.

0 - To exclude active and/or complete orders.

1 - To include active and/or complete orders.

Route Option

Set the required route option for the comparison with actuals.

0 - For order route.

1 - For planning route of the item.

2 - For costing route of the item.

Material Standard Cost

Select cost values to be used for material inputs.

1 - To use Production standard costs.

2 - To use Inventory stockroom costs. This uses the cost held on the primary item/stockroom record, against the item's default costing method (standard, latest, average, or FIFO). The costing method is defined via Inventory Details.

Compare Actual With

Set flag to base this parameter on.

1 - Standard routes to be based on order quantities.

2 - Standard routes to be based on receipt quantities.

3 - Planned orders.

Press **Enter** to submit job.
