Chapter 4

Advanced Financial Integrator

Advanced Financial Integrator

Introduction

1... **2...** PDA

The purpose of the Production Advanced Financial Integrator (AFI) is to process transactions generated by Production bookings using user-defined Journal rules to create auditable General Ledger account postings for production activities.

The Production AFI consists of 6 applications, one for each movement class that can be extracted:

Production Application	File	Description
M1	PCP56	WIP movements
M2	PCP62	Material input and output movements
M3	PCP59	Labour and machine movements
M4	PCP58	Setting and indirect movements
M5	PCP93	Scrap and rework movements
M6	PCP53	Subcontract movements

These movements can be processed using the standard AFI Application and standard General Ledger functions to create Trial or Actual (Live) posting in the General Ledger.

All processed movement records are marked with:

- A General Ledger Update indicator (Trial or Live)
- General Ledger session number.

This ensures that records cannot be updated more than once.

AFI is a structured application, therefore each Production application has its own:

- Application reference data
- Extract option
- General Ledger update program
- Utilities

Considerations

- Since the AFI application does actually update the General Ledger, it should be used with caution. It is therefore recommended that access to the update options is restricted.
- The purpose of the Trial General Ledger Update facility (see Initiate Extract In Test Mode), is to ensure that the data extraction is correct by providing a simulation of the postings which are about to be made. Use this facility to verify the integrity of the journals before committing a live update.

- The extraction of Subcontract movements should be carefully monitored as they are generated in two movement files. There is a possibility of double counting if records are extracted from both files. The two files are:
 - PCP56 - Change balance at Subcontractor.
 - PCP53 - Subcontract Movements.
- In Co-Product environment, multiple Standard and Actual Co-Product Output Inventory Receipts may exist for a given transaction event. Care should be taken that all relevant receipts are identified.
- The POSTING PERIOD used by the standard AFI Application is taken from the current period as set in the Inventory Application.
- WARNING - The AFI options on the Production, Advanced Financial Integrator menu cannot be used unless all the necessary maintenance has been carried out in the standard AFI Application. See Advanced Financial Integrator product information.

Initiate Production Extracts

1/PDA

This option carries out the live extraction of data. If the Automatically Update GL field on the Application Maintenance screen (see Maintain Application on the Advanced Financial Integrator menu) has been set for immediate update, then on completion of this job the General Ledger is updated. If the immediate update option is not set then this option extracts the data and makes it available for review using Extract Sessions Transactions.

Select Initiate Production Extracts on the menu to display the Production Data Extract screen.

F1542	Z1 - GB Demonstration Company	User GBJBAMS	5/12/95

F3=Exit F4=Prompt F8=Submit Job			
05-37 SF MW KS IM II KENB20A PET166S2			

Fields:

Source Company

Enter the company number containing the data.

Organisational Model From/To

Enter the Organisational Model. There is only one model.

Post

Enter 1 to select the applications from which the extracted data is to be processed into the Ledger.

Select **F8=Submit Job** to submit the job

Initiate Extract In Test Mode

1...
2... **21/PDA**

This option allows a trial extract of data to be made without updating the ledger in any way.

 Select the Initiate Extract In Test Mode option.

Fields:

Application Code

Enter the required code.

Source Company

Enter the source company.

 Press **Enter** to display the Advanced Financial Integrator Trial Posting WIP Movements screen.

07-32		SF		MW		KS IM II KENB20A PET166S2	

Fields:

Organisation Model

Enter the live model code.

Select Transactions

Enter 0 for all transactions within the specified range or 1 for all unprocessed transactions.

Transaction Range From/To

Leave for blank for all transactions.

Journal Type

- 1 - For Test Journals.
- 2 - For Live Journals.
- 3 - For both kinds of journal.

Be careful to select the correct type of Journal e.g. Live Journals are not actioned if 1 is selected.

Consolidate Postings

- 0 - For individual entries to the same account.
- 1 - For consolidated entries.

Select **F8=Submit Job** to submit the job. A report is automatically produced.

Extract Sessions Transactions

1... 31/PDA **2...**

This option displays extracted sessions.

Select Extract Sessions Transactions on the menu to display the AFI Session Enquiry screen.

F1650		Advanced Financial Integrator				User	GBJBAMS	5/12/95

Install AFI Control Data

41/PDA

This option is used to set up the link between the Production Application and the AFI Application.

Select Install AFI Control Data on the menu to display the Install AFI Control Data screen.

DB940	Z1 - GB Demonstration Company	USER GBJBAMS	5/12/95 16:23:02
Install AFI Control Data			
This option causes AFI Control Data to be copied from the install files in the manufacturing files library into the control files in the AFI library. AFI will then be aware that Manufacturing is installed, and be able to support the link into the General Ledger.			
Copy From Library . . . <u>OSLPDD3</u>		Only amend this, if you have renamed your Manufacturing displays library.	
Copy To Library . . . <u>OSLFIF3</u>		Amend this library to match your Financial Integrator files library, or the Consolidated Financials files library.	
Please note that records will be copied into the file if they do not already exist. If they do exist, they will be overwritten by the new records.			
F3=Exit F8=Submit Job			
11-25	SP	MW	KS IM II KENB20A PET166S2

Fields:

Copy From/To Library

The two fields on the menu are filled with the default file names from the two applications. Unless you have renamed these files it should not be necessary to change them.

Note: This option must be taken when first setting up the AFI links. It is not normally necessary to take it again unless changes are made to the Data Date options in AFI Utilities or if new applications are added.

Change Application

89/PDA

This option allows the appropriate application to be selected before using the other options on the AFI Main Menu.

Select Change Application on the menu to display the Select Application window.

The screenshot displays the 'Manufacturing Advanced Financial Integrator Menu' for user GBJBAMS on 05/12/95 at 16:21:44. The menu lists various options including '1. Initiate Production Extracts', '31. Extract Sessions transactions', 'Test Extracts', and '21. Initiate Extract in Test'. A 'Select Application' window is overlaid, showing a list of applications: DB Bonded Inventory, DI Drinks Inventory Management, DN Bonded Inventory, DO Drinks Sales Order Processing, and DP Drinks Purchase Management. The window also includes a 'More: +' button, a '1=Select' prompt, a 'Position to:' field, and a 'F12=Previous' key. Below the menu, the 'Option 89' is entered, and the 'Search' field is empty. The bottom of the screen shows function key shortcuts: F3=Exit, F4=Prompt, F6=Messages, F12=Previous, F16=Change company, F18=Prints, 15-68, SF, MW, KS, IM, II, KENB20A, and PET166S2.

Fields:

Select. Enter 1 against the application required.

Note: There are 6 applications covering the Production systems.

Note: When entering the AFI menus for the first time after accessing other non AFI menus, the system automatically prompts for the application.
