Chapter 6

Advanced Financial Integrator

Introduction to AFI

The System 21 Production Advanced Financial Integrator (AFI) provides a framework within which to post details of costs incurred in the manufacturing process to the General Ledger. AFI uses user-defined journal rules to create auditable General Ledger account postings for production activities.

Each link from Style Production to AFI has an Application Code defined that is specific to AFI. The Style Production AFI application codes are:

Production Application	File	Description
P1	PCP56	WIP movements
P2	PCP62	Material movements
P3	PCP59	Labour and machine movements
P4	PCP58	Setting and overhead movements
P5	PCP93	Scrap movements
P6	PCP53	Subcontract movements

These movements can be processed using the standard AFI Application and standard General Ledger functions to create Trial or Actual (Live) posting in the General Ledger.

All processed movement records are marked with:

- A General Ledger Update indicator (Trial or Live)
- General Ledger session number.

This ensures that records cannot be updated more than once.

AFI is a structured application, therefore each Production application has its own:

- Application reference data
- Extract option
- General Ledger update program
- Utilities

Considerations

- Since the AFI application does actually update the General Ledger, use it with caution. We recommend that you restrict access to the update options.
- The purpose of the Trial General Ledger Update facility (see Initiate Extract In Test Mode), is to ensure that the data extraction is correct by providing a

simulation of the postings which are about to be made. Use this facility to verify the integrity of the journals before committing a live update.

- The extraction of Subcontract movements should be carefully monitored as they are generated in two movement files. There is a possibility of double counting if records are extracted from both files. The two files are:
 - PCP56 - Change balance at Subcontractor.
 - PCP53 - Subcontract Movements.
- In Co-Product environment, multiple Standard and Actual Co-Product Output Inventory Receipts may exist for a given transaction event. Care should be taken that all relevant receipts are identified.
- The POSTING PERIOD used by the standard AFI Application is taken from the current period as set in the Inventory Application.

WARNING - You cannot use the AFI options on the Production, Advanced Financial Integrator menu unless you have carried out all maintenance necessary in the standard AFI Application. For more information, refer to the Advanced Financial Integrator product information.

Initiate Production Extracts

1/P1A

This option carries out the live extraction of data. How it does this depends upon the setting of the Automatically Update GL field on the Application Maintenance screen. (To access this screen, go into Maintain Application in the Advanced Financial Integrator application.)

- If this field is set for immediate update, then the General Ledger updates upon completion of this job.
- If this field is not set for immediate update, then this option extracts the data and makes it available for review using Extract Sessions Transactions (option 31/P1A).

Note: To extract the data without updating the General Ledger, run Initiate Extract In Test Mode (option 21/P1A).

Select Initiate Production Extracts on the menu to display the Production Data Extract screen.

Fields:

Source Company

Enter the company that contains the data.

Organisational Model From/To

Enter the Organisational Model.

Post WIP movements

Enter 1 to extract WIP Movements for review or for updating the General Ledger.

Post Material movements

Enter 1 to extract material movements for review or for updating the General Ledger.

Post Labour & WS movements

Enter 1 to extract labour and workstation movements for review or for updating the General Ledger.

Post Setting & OH movements

Enter 1 to extract setting and overhead movements for review or for updating the General Ledger.

Post Scrap movements

Enter 1 to extract scrap movements for review or for updating the General Ledger.

Post Subcontract movements

Enter 1 to extract subcontract movements for review or for updating the General Ledger.

Select **F8=Submit Job** to submit the job.

Initiate Extract In Test Mode

21/ P1A

This option allows you to carry out a trial extract of data without updating the General Ledger in any way.

Advanced Financial Integrator Trial Posting Screen

Select Initiate Extract In Test Mode on the menu to display the Advanced Financial Integrator Trial Posting screen.

Use this screen to select the type of movements (eg WIP movements, material movements etc) on which you wish to perform a trial extract.

Fields:

Application Code

Enter the AFI application code for the type of movement you require.

Press **Enter** on the Advanced Financial Integrator Trial Posting screen to display Advanced Financial Integrator Trial Posting WIP Movements screen 1.

Advanced Financial Integrator Trial Posting WIP Movements Screen 1

Press **Enter** on the Advanced Financial Integrator Trial Posting screen to display Advanced Financial Integrator Trial Posting WIP Movements screen 1.

Use this screen to select the source company for the trial extract.

Fields:

Source Company

Enter the company that contains the data.

Press **Enter** on Advanced Financial Integrator Trial Posting WIP Movements screen 1 to display Advanced Financial Integrator Trial Posting WIP Movements screen 2.

Advanced Financial Integrator Trial Posting WIP Movements Screen 2

Press **Enter** on Advanced Financial Integrator Trial Posting WIP Movements screen 1 to display Advanced Financial Integrator Trial Posting WIP Movements screen 2.

Use this screen to select the transactions for which you wish to extract trial data.

Note: You need to specify whether you wish to extract test journals or live journals or both.

Fields:

Organisation Model

Enter the live model code.

Select Transactions

Enter one of the following:

- 0 - Select all transactions within the specified range.
- 1 - Select all unprocessed transactions.

Transaction Range From/To

Enter a transaction range. To obtain all transactions, leave blank.

Journal Type

Enter one of the following:

- 1 - Test. Extract test Journals.
- 2 - Live. Extract live Journals.

3 - Both. Extract both test and live journals.

Consolidate Postings

0 - No. Post entries to the same account individually.

1 - Yes. Consolidate postings to the same account.

Select **F8=Submit Job** to submit the job and print a report.

Extract Sessions Transactions

1...
2...

31/P1A

Use this option to view data extracted by the Initiate Production Extracts program (option 1/P1A).

Select Extract Sessions Transactions on the menu to display the AFI Session Enquiry screen.
