Chapter 3

Production Order Enquiries And Reports

Review Orders options

To review non-archived production orders, use the Orders option.

Alternatively, to review orders already archived via the Order Archive Selection option under Style Production Definition Management, use the Archived Orders option.

Orders

1/P4E

Use this enquiry to review one or more production orders. You can use the selection parameters to limit the orders that you review.

You can open additional windows to review material issues and operation bookings details.

Production Order Enquiry Screen 1

Select Orders on the menu to display Production Order Enquiry screen 1.

Fields:

Order Number

This function depends on how you want to use the facility:

- To display an existing order, enter the order number.
- To select from a range of orders, leave this field blank, set your selection parameters and press **F14=By Order**, **F15=By Reference** or **F16=By Style**.

Or Select By

The following fields constitute search criteria for an order review.

Reference

To select orders with a specific reference as entered on the order header in the Reference 1 field, enter a reference here. Press **F15=By Reference** to display orders that have the same reference.

Style

To select orders for a specific style, enter the style code. Press **F16=By Style** to display orders that relate to the style entered.

Orders Due Range

To select orders within a specific date range, enter a 'from' and 'to' date range here. Press **F14=By Order** to display all orders within the date range entered.

Include Status

These fields enable you to include or exclude orders at a particular status.

(Status)

0 - Exclude (default for 'Completed')

1 - Include (default except for 'Completed')

Press **Enter** on Production Order Enquiry screen
1 to display Production Order Enquiry screen 2.

Functions:

F14

By order. Select by order number.

F15

By reference. Select by reference.

F16

By style. Select by style.

Production Order Enquiry Screen 2

This screen shows current details of the production order.

Press **Enter** on Production Order Enquiry screen
1 to display Production Order Enquiry screen 2.

Fields:

Original Quantity

This field displays the original planned order quantities rather than the quantity being produced. This field only appears when the completed quantity has been adjusted through one or more operations being marked as over or short.

Functions:

F14

Review Operations. Displays operation level details for key operations. This function is not displayed for orders at 'Planned' status.

F15

Review Materials. Review materials issued and outstanding.

F16

Review Receipts.

F17

View any sales orders that are reserved against the production order.

F18

Order Progress. Display order progress by bundle ticket type.

F19

Bundle Review. Display the status of all bundles on the order. This function is only displayed if the Allow Bundle Tracking flag on the Company Profile is set to 1 (yes).

F20

Review Output. Review status of variants on the order.

F21

Enables any entered header text to be reviewed; the function is displayed in reverse video. This function is only displayed if additional text has been entered.

F23

WIP Review. Review work-in-progress at each operation.

Order Enquiry Operations Review Screen (F14)

This screen displays a list of the operations, with their status, for the selected production order.

Select **F14=Review Operations** on Production Order Enquiry Screen 2 to display the Order Enquiry Operations Review screen.

Select **F14=Review Operations** on the Order Entry Materials Review screen to display the Order Enquiry Operations Review screen.

F18=Display Qty Started F19=+/- Additional Balances										
10-02		82	MW	KS	IM	II	KENB20A	PET166S2		

Fields:

O(ption)

1 - Display booking details. Any number of operations can be selected before pressing **Enter**. These are then displayed alternately when **Enter** is pressed following review of an operation's details.

2 - Display any text entered against the operation. Such operations are indicated by an asterisk (*) appearing to the side of this column.

Sts

Status. This column displays standard order status codes against each operation: CON (confirmed); REL (released); ACT (active); FIN (complete); CNL (cancelled)

Tkt

Bundle ticket. This column shows the associated bundle ticket number.

Qty Sched / Qty Started

The Qty Sched(uled) field toggles with an additional Qty Started field:

- Quantity scheduled is the operation quantity required to make the required number of variants; including additional requirements due to expected wastage defined for the operation or any other subsequent operations on the order.
- Quantity started is the quantity available to commence work at the operation; that is, the quantity booked good (available) at the previous operation as held in the prior operation WIP location. If it is the first operation it is equal to the scheduled quantity.

Qty Comp

The Qty Comp(leted) is the quantity booked good at the operation, whilst the Qty O/S (outstanding) is the difference between the quantity scheduled and the quantity completed.

Enter 1 in the Option field on the Order Enquiry Operations Review screen to display Transaction Input Enquiry Screen 1.

Functions:

F13

Select a new production order.

F14

Access material review.

F15

Display all operations/Display key operations. This function toggles between displaying key operations only, or all operations.

F18

Display quantity started/Display quantity scheduled. This function toggles between quantity available at prior operation and quantity required to meet the order requirement.

F19

+/- Additional Qtys. Display the following additional balances at each operation: quantities reworked, held and scrapped.

Display also the original planned order quantity rather than the quantity being produced. This field only appears when the completed quantity has been adjusted through one or more operations being marked as over or short.

Transaction Input Enquiry Screen 1 (Option 1)

This screen displays a summary listing of the production bookings and material issues which have been made against a selected operation on a production order.

Enter 1 in the Option field on the Order Enquiry Operations Review screen to display Transaction Input Enquiry Screen 1.

Where applicable, use the PageUp and PageDown (or equivalent) keys to look through a multi page display.

F3=Exit F12=Previous								
10-04		SA	MW	KS	IM	II	KENB20A	PET166S2

Fields:

Opt(ion)

1 - Display further details. Only a single line can be selected at any one time. The detailed enquiry also shows the transaction number for reference. Press **F12** to return to the Operation Bookings screen.

Actvty

Activity. This column shows the activity type associated with the operation. WOMISS (production order material issue) and STATUP (status update) are system dependent codes. PRODRP (production reporting) shown in the example screen is a user-defined code.

Some such similar code would be displayed against each of your booked quantities; but note that more than one type may be recorded against the operation.

Item

The Item column shows the style code extended to full style/colour/size level where appropriate. In the example screen, the line ELF_BOOTSBEIE01 indicates

the style (elf_boots); colour (bei) beige; and size code (e01) which translates to actual size 6.

Sts

The Sts (status) column indicates the status of the transaction with respect to the Transaction Manager; that is, indicates whether or not the transaction has been processed. A status code of blank (unprocessed); 1 (part processed) or 2 (processed) may be displayed. In the majority of cases the most usual status is 2. A status of unprocessed could indicate that the Transaction Manager is not running.

Enter 1 in the Option field on Transaction Input
Enquiry screen 1 to display Transaction Input
Enquiry screen 2.

Transaction Input Enquiry Screen 2 (Option 1)

Enter 1 in the Option field on Transaction Input Enquiry screen 1 to display Transaction Input Enquiry screen 2.

Enter 1 against an operation to display a breakdown of the operation quantities at all of the WIP locations at which it exists. More than one operation may be selected.

Enter 1 in the Select field on the Order Enquiry WIP Review screen to display the WIP Location Stock Status window.

Functions:

F15

Planning Enquiry. Enables access to MPS/MRP enquiry depending on whether the style is defined as an MPS or MRP item.

WIP Location Stock Status Window (Option 1)

This window shows a breakdown of all the WIP inventory at a given operation on an order. It shows individual balances for each of the WIP locations where it exists. The information is presented at style level.

Enter 1 in the Select field on the Order Enquiry WIP Review screen to display the WIP Location Stock Status window.

Fields:

Operation

This field enables you to display WIP inventory details for additional operations, without returning to the WIP Review screen and selecting again.

Functions:

F16

Lot Enquiry. Displays lot details of individual lots held at the location; for lot controlled items only.

F17

Subcontractor. Shows additional subcontractor details for subcontracted operations.

F19

Held. Displays any held inventory references.

Archived Orders

1...
2...

6/P4E

Use this enquiry to review orders that have been archived via the Select Orders to Archive function.

Prompts and facilities are similar to the standard Orders enquiry routine, except that all orders are at a status of 'Complete'.

Select Archived Orders on the menu to display the Production Order Enquiry screen.

```

PC010                ZS - Style Demonstration Co.        USER GBJBAMS        29/03/96

Order Progress

2/P4E

Use this enquiry to review the progress of a production order by bundle ticket types. Use the enquiry in two ways:

- In a parallel operation production environment, to identify the total quantity available for assembly (marry up).
- To highlight the components/bundle ticket types that are causing the most problems.

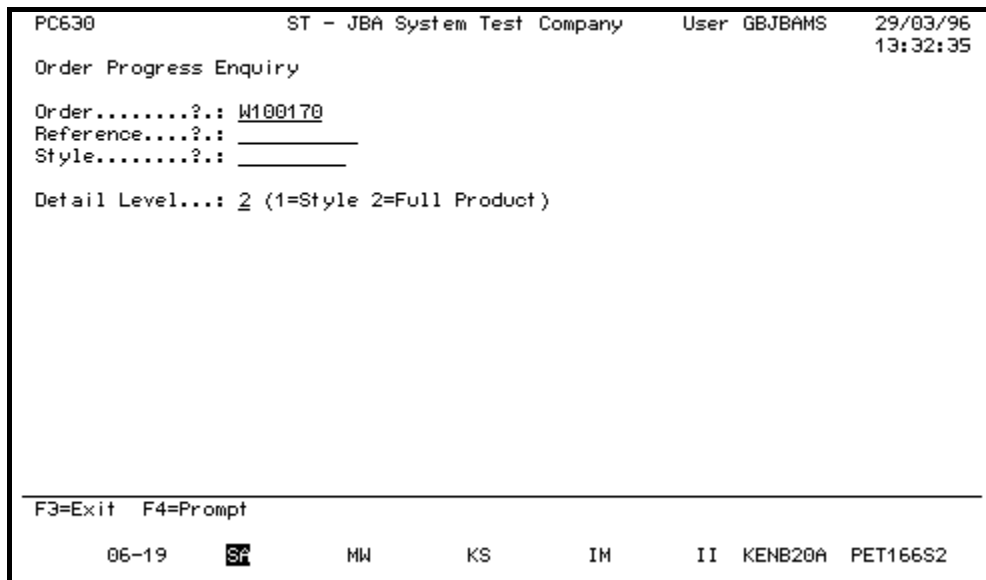

Select Order Progress on the menu to display the Order Progress Enquiry screen 1.

Order Progress Enquiry Screen 1

Use this screen to request an order progress enquiry at either style or full product (variant) level.

-  Select Order Progress on the menu to display the Order Progress Enquiry screen 1.

Material Requirements

3/P4E

Use this enquiry to display production orders that require a specific material.

Select Material Requirements on the menu to display Material Requirements Screen 1.

Material Requirements Screen 1

Select Material Requirements on the menu to display Material Requirements Screen 1.

Material

The system checks that the item is used as a material input on a live production route, and displays an error message if it does not.

Requirement From/To

Production orders are only selected if their requirement for the material falls within the date range. If no date is entered, then an infinite horizon is assumed.

Press **Enter** on Material Requirements Screen 1 to display Material Requirements Screen 2.

Material Requirements Screen 2

Press **Enter** on Material Requirements Screen 1 to display Material Requirements Screen 2.

Material Availability

1... **4/P4E**
2...

Use this enquiry to test material availability against:

- A production order. You can:
 - Check if enough materials are available to satisfy demands made by the order.
 - Allocate material lots.
 - Restrict the enquiry to the first operation only.
 - Include or exclude wastage.
- A style route/BOM. You can:
 - Test alternative configurations of a product for material availability.
 - Check material availability for 'Planned' status orders. That is, those orders that do not yet have firm operational and material requirements.

A trial allocation may be actioned without effecting permanent changes to the system database. As each material is included in a trial kit, a work file keeps a record of the effect. For a particular material, balances at each stockroom may be reviewed, together with the quantities assigned to the trial kit. Exiting the function 'de-allocates' the trial material quantities

For the purpose of the allocation routine, orders at 'Released' and 'Active' status use On-hand stock; whilst 'Confirmed' orders and those enquiries based on a route, use Available stock.

Material Availability Enquiry With Allocation Screen 1

-  Select Material Availability on the menu to display Material Availability Enquiry With Allocation screen 1.
-  Select **F18=Mat. Avail.** on Production Order Release screen 2 to display Material Availability Enquiry With Allocation screen 1.

Fields:

Prod Order

The function of this field depends on how you want to use the facility:

To review material availability for a specific order, enter the order number: you may additionally set the Ignore Effectivity and Include Materials at All or First Operation Only fields

To select from a range of orders, leave this field blank, set your selection parameters and press **F16=Review Orders**.

Leave blank, and select a style route to review

Or Select By

The following fields constitute search criteria for an order review (the fields may be used independently), or for a route/BOM analysis.

Style

Enter a parent style. You cannot enter a production order number and a style item code.

Route

You must enter a route code when checking material availability for a style rather than a production order.

Reference

If selecting orders for review, you can limit the orders presented to those whose Reference 1 entries (as entered on the order header) match the entry specified here

Quantity

This should only be entered for a route/BOM enquiry. Left blank, the system defaults to the economic order quantity (EOQ) on the relevant route.

*On pressing **Enter** on this screen, the system displays a variant spread window in which you must specify the output quantity expected of each variant.*

Ignore Effectivity

This field determines whether materials are considered based on their effectivity dates on the route.

0 - Consider effectivity dates.

1 - Ignore effectivity dates.

As At

Enter an effectivity date. The system defaults to the current date.

Include Materials

This field indicates whether material availability should concern itself with all operations.

1 - Review all materials.

2 - Review materials at the first operation only.

Production Output Quantities Window

This window displays the spread across the variants.

This window is opened when a style route/BOM enquiry has been actioned, for a style with multiple variants on the Material Availability enquiry.

Shipper Schedule

11/P4E

Use this report to:

- List all item operations scheduled to be performed by a subcontractor.
- View the operations that have enough WIP inventory ready to be sent. (That is, where the prior operation quantity exists in WIP inventory as available inventory.)
- View, as an optional extra, standard material requirements needed by the subcontractor to complete the operations.

The report shows production order number, item/operation sequence and description, quantity available to ship, quantity of the item/operation currently at the subcontractors, and the date such inventory is due back as complete.

If materials are requested, inventory details coupled with basic production data is printed for each item/operation listed as being due for shipment. These details pertain to the materials that are absorbed during the subcontract operation. For each material, the report lists its item code and description, quantity required, stocking UoM, the stockroom it can be resourced from and the quantity currently available in the stockroom.

Select Shipper Schedule on the menu to display the Subcontractor Shipping Schedule Report screen.

Order Range From.....? _____ to _____			
F3=Exit F4=Prompt ENTER=Submit Job			
05-47 S MW KS IM II KENB20A PET166S2			

Fields:

Organisational Model

Enter an organisational model.

Subcontractor (Machine) Range

This report considers production due to be completed by a certain date. Such planning details are held for each machine in terms of its firmed work load. The machine referenced is that defined for the parent style route at the subcontracted operation. This field allows the report to be limited to a range of machines. A machine may be an on-site reference, or could be used to indicate a specific or group of subcontractors . Left blank, all associated machines are included.

Shipping Date

Enter the date for which the report is to be printed; this is the date on which WIP is destined to be shipped.

Include Material In Schedule

Controls whether material requirements are printed on the report or not.

0 - Exclude material requirements.

1 - Include material requirements.

Order Range

If a range of orders is entered the report reflects the planned subcontract shipments, on the date entered, to meet the production order range requirements.

Shipper Notes

12/P4E

Use this option to print and reprint shipper (despatch) notes to accompany subcontractor WIP shipping transactions. Shipper notes include the basic information from the production order (eg order number).

Select Shipper Notes on the menu to display the Subcontractor Shipper Print screen.

Fields:

Organisational Model

Enter the 'live' organisational model.

WIP Location Range

Enter a WIP location range or leave blank to include all locations. These are the WIP locations from which inventory is to be shipped, that is, the operations prior to those designated subcontracted.

Subcontractor

The option is given to limit the printing of shipper notes to those relevant to a single subcontractor. Any code entered is validated against Style Purchase Management supplier codes.

Production Order

Enter a production order to limit the printing of shipper notes to a single production order. It can also be used to limit the prompt on the shipper number to only those entered for the specific production order.

Shipper Number

If a specific shipper (despatch) note requires printing, enter the number here.

Shipper Form

Indicates whether the shipper note is to be output to pre-printed stationery, or plain paper.

0 - Print on plain paper. Headings, titles, quantities and numbers are included.

1 - Print on pre-printed stationery. Only quantities and numbers are printed.

Reprint

Indicates whether or not the document has been printed before.

0 - Print for first time.

1 - Reprint the document.

Functions:

F8

Submit the print job for batch processing

Stock Report

13/P4E

Use this report to print details of WIP inventory and materials at subcontractors. Optionally, a cost analysis of WIP and materials can be produced. Additionally, the report can include shipper and receipt information.

Select Stock Report on the menu to display the Subcontractor Stock Status Report screen.

Subcontractor Stock Status Report

Selection:

Organisational Model...? ☐

WIP Location Range....? to

Subcontractor.....? to

Item Number Range.....? to

Operation Sequence....?

Report Basis:

Include Valuation..... 0 1=Yes

Include Shipper Details 0 1=Yes

Include Receipt Details 0 1=Yes

Sequence:..... 1 1=By Subcontractor, 2=By Item/Operation

F3=Exit F4=Prompt F8=Submit Job

06-30 MW KS IM II KENB20A PET166S2

Fields:

Organisational Model

Enter the 'live' organisational model.

WIP Location Range

Enter a WIP location range or leave blank to include all locations. These are the WIP locations assigned to machines at operations prior to those designated subcontracted.

Subcontractor

Enter a code to restrict the report to a single subcontractor.

Style Range

Enter a style range or leave blank to include all styles.

Operation Sequence

The option is given to report only one operation sequence.

Include Valuation

Indicates if the report should include the value of the inventory at the subcontractor.

0 - Do not print material and WIP inventory values.

1 - Include valuation.

Include Shipper Details

0 - Do not print shipper details.

1 - Include shipper details. The details printed are: shipper number, shipped quantity, received quantity, due dates, production order and line numbers and the status of the shipment.

Defaults to 0 if the Shipper Tracking flag on the organisational model is set to 0 or 2 (shipper tracking not required), otherwise if the tracking flag is set to 1 or 3 (shipper tracking required) the default is 1.

Include Receipt Details

Indicates whether or not receipts from subcontractors should be printed.

0 - Exclude receipt details.

1 - Include receipt details. The additional details printed are: advice note number, received date and received quantity.

Sequence

Controls the sequence in which the report is printed:

1 - Subcontractor code is the prime sequence. Style code sequence within subcontractor.

2 - Style code is the prime sequence. Subcontractor sequence within style code.

Receipts Schedule

1...
2... **14/P4E**

This report prints details of the WIP inventory expected back from subcontractors. The report is printed in subcontractor sequence. For each planned receipt, the report shows the:

- Style/operation number and description.
- Quantities due back grouped according to the MPS reporting profile.
- Total in the last column.

If the date range is not completely covered by the eight buckets, the eighth bucket quantity refers to all expected receipts from its start date to the end of the date range. For example:

- Date range: 1/11 - 31/12 = 61 days.
- Reporting policy: 7 days per bucket.
- Eighth bucket starts 20/12, normally finishes 26/12, however, because it is the eighth bucket, it covers to 31/12.

Select Receipts Schedule on the menu to display the Subcontractor Receipts Schedule Report Selection screen.

Latest Operation Start Date

Enter an operation cut-off date or leave blank to include all operations.

Machine Range

Enter a range of machines or leave blank to include all machines.

Include Order Status

The option is given to exclude 0 or include 1 operations at 'Confirmed', 'Released' and 'Active' status.

WIP Valuation

24/P4E

Select WIP Valuation on the menu to display the Work In Progress Valuation screen.

This report values work-in-progress using actual costs, and shows for each issued, received and WIP value (issued less received) the following costs:

- Material.
- Labour.
- Machine.
- Subcontract.
- Overheads.
- Others. variable, setting, fixed, miscellaneous and total. The report shows a summary total for all orders/items.

To calculate material costs, you can choose to use either production costs or inventory costs.

- Production costs. Material costs for manufactured materials are based on the selected cost route.
- Inventory costs. Uses the cost held against the material, based on the setting of the Costing Method field on Product Maintenance screen 5. For more information, refer to the Style/Material Details option.

For both types, you can choose whether to print costs at operation level.

Operation Detail Not Required

Multiplies the material cost by the material quantity issued against the production order.

Operation Detail Required

The unconsumed cost and cost per unit must be maintained for each operation. An example of this is given below under Operation Level Material Costs.

To obtain the cost per unit, the total cost of materials at the operation is divided by the production order quantity. These costs are then added to the total cost of unconsumed materials and total cost per unit respectively. The total unconsumed costs to be carried forward is calculated as:

- (Qty complete at this operation less WIP at this operation) x total cost per unit

The cost of material at this operation is calculated as:

- Unconsumed from previous operation less costs carried forward.

Operation Level Material Costs - Example

Below is an example of the calculations required for material costs for a production order where the ordered quantity is 200:

Materials Issued	Operation	Total Cost
Fabric	10	£100
Trim	20	£50

The status is:

Operation	Complete Qty	WIP
10	150	50
20	100	50
30	50	50
40	0	0

The material WIP costs are:

Operation 10:

1. (Oper complete - Oper WIP) x (Op Material cost / order qty) = carried forward
2. (Material cost b/forward + Op Material cost) - carried forward = material cost at operation

$(150 - 50) \times (100 / 200) = £50$ carried forward

$(£0 + £100) - £50 = £50$ material cost at Operation 10

Operation 20:

1. (Oper complete - Oper WIP) x (previous Material cost + [Op Material cost / order qty]) = carried forward
2. (Material cost b/forward + Op Material cost) - carried forward = material cost at operation

$(100 - 50) \times (£.50 + [£50 / 200]) = £37.50$ carried forward

$(£50 + £50) - £37.50 = £62.50$ material cost at Operation 20

Operation 30:

1. (Oper complete - Oper WIP) x (previous Material cost + [Op Material cost / order qty]) = carried forward
2. (Material cost b/forward + Op Material cost) - carried forward = material cost at operation

$(50 - 50) \times (0.75 + [0 / 200]) = £0$ carried forward

$(£37.50 + £0) - £0 = £37.50$ material cost at Operation 30

Fields:

Report Sequence

Enter one of the following:

- 1 - By Order. Sequence the report by production order number.
- 2 - By Item. Sequence the report by style.

Operation Detail

Enter one of the following:

0 - No Detail. Print three lines of cost: at issue, WIP and completed. The calculation for the completed line is:

For materials:

(Issued cost) x (production order completed quantity / production order quantity)

For non materials:

(production order completed quantity) x (cumulative unit cost for production order)

- 1 - Detail. Print costs at operation level for costs at WIP only.

Use Style Cost Route

Enter one of the following:

- 0 - No. Enter a cost route in the Cost Route field below.
- 1 - Yes. Use the cost route defined for the style.

Cost Route

If you have set the Use Style Cost Route field on this screen to 0, enter a cost route here.

Note: If the style is non-manufactured, then leave this field blank.

Cost Set

Enter the cost set you wish to use. To use a blank cost set, leave this field blank.

Material Costs

Enter one of the following:

- 0 - Production. Use production costs.
- 1 - Inventory. Use inventory costs.

Order Number

Enter an order range or leave blank to include all orders.

Style / To

Enter a range of styles to run the report over. To explode styles to full product detail level, enter style variants. To include all styles, leave blank.

Include Order Status

Enter one of the following:

- 1 - Active. Include active orders.
- 2 - Complete. Include complete orders only.
- 3 - Both. Include complete orders only.

To submit a batch job that prints the report, press **Enter**.

Labour Efficiency

25/P4E

This report compares actual labour used to standard labour derived from the planning route. Efficiency is reported by route, and summarised by machine for a selected date range.
