Chapter 4

WIP Inventory Control

WIP Locations

Style associates each machine with a work-in-progress (WIP) location. The WIP location may be a physical location where WIP is stocked/palletted, or it may be a virtual location for identification within Style Production.

During production, work in progress is booked against a WIP location. You can use enquiries and reports to review how the work associated with a particular production order is progressing.

Each WIP location holds three balances (that is, quantities): on-hand, held and subcontracted.

A status of held indicates that the work is not ready to move to the next operation. For example, work may be held whilst waiting for a quality inspection. Subsequently, held work may be either released, thereby becoming available, or scrapped.

Style calculates quantity available as:

- Available=On-Hand - Held - Subcontracted

Booking Work Against a WIP Location

Worked can be booked in at those operations designated as count points. Operations that are not count points are named backflushed operations; the operation gets booked in automatically at the next count point operation. Backflushed operations are described later.

There are four levels at which you may book in WIP at a count point operation:

- Style. At this level, you report a single quantity.
- Style/colour. At this level, you report each colour variant. For example, you might break down a quantity of 20 into 5 blue, 5 red, 5 green and 5 black.
- Style/size. At this level, you report each size variant. For example, you might break down a quantity of 20 into 5 xtra large, 5 large, 5 medium and 5 small.
- Style/colour/size. At this level, you report each colour and size variant. For example, you might break down a quantity of 14 into 2 blue/large, 2 red/large, 3 blue/medium, 3 red/medium, 2 blue/small, 2 red/small.

Backflushed Operations

It is time-consuming to book in WIP at every operation.

An alternative to booking at each operation is to backflush work quantities and times at operations. You cannot report against a backflushed operation, other than to book activities such as:

- Actual labour time.
- Machine down time.
- Additional material issues.
- Additional machine time
- Additional labour time.

You could choose to not book any work-in-progress at any operations, booking completed work at the final operation only. However, this is unusual. You are more likely to backflush certain operations along the route.

If a backflushed operation requires materials, the next booking at a count point operation takes materials out of stockrooms back to the previous count point.

Pay gets booked via the bundle tickets.

Held Inventory options

The options described below allow you to perform the following activities with WIP inventory:

Option	Purpose
Hold Inventory	Hold WIP inventory that you have already booked in as good.
Release Inventory	Release WIP inventory previously booked as held.
Scrap Held Inventory	Scrap WIP inventory booked in previously as held.

Hold Inventory

1/P4W

Use this option to hold WIP inventory that was booked in previously as good (ie Available) at an operation. By marking inventory as held, you prevent the inventory's movement to the next operation.

You must record all transactions against count point operations.

Select Hold Inventory on the menu to display the WIP Inventory Hold Entry screen.

WIP Inventory Hold Entry Screen

Select Hold Inventory on the menu to display the WIP Inventory Hold Entry screen.

MJ212	ST - Style Test & QA Company	User QASTYLE	15/07/97 16:03:43

Lot Number.....?			
Quantity..... 0			
F3=Exit F4=Prompt F12=Previous F19=Held WIP Inventory Details			
5-26 SA MW KS CL IM DM II KENB20A KB PET159S1			

Fields:

Date

Specify a transaction date; entry is mandatory. The system will default to the current date but this can be overtyped if required.

Shift

If a shift is entered, then this should be a shift number on the shift profile in force at the relevant machine on the day specified.

WIP Location

Enter the machine WIP location at which the WIP inventory transaction is being recorded. The system will validate any quantity against the available (on-hand less held less subcontractor) balance at this location; it is essential that the machine WIP location relates to the order/operation at which the transaction is being recorded.

This is of particular importance when bookings have been made to more than one machine with different associated WIP locations.

Order

Enter the relevant production order number.

Operation

Enter the relevant operation sequence.

*Note: When a valid operation has been entered, the system will enable **F19** allowing you to review*

*WIP inventory currently held at the designated
WIP location*

Lot Number

If the WIP Lot Tracking flag on the Organisational Model is set to 1 (yes) then all lot controlled item bookings must be made against a lot number. In such circumstances it is mandatory to enter the held lot reference; this provides an additional validation parameter when comparing the lot available quantity to the entered lot quantity.

Quantity

This is the total quantity to be held.

- The quantity must be less than or equal to the available quantity at the order/operation at the WIP location specified.
- Quantities must also correlate to lot control references (ie WIP Lot Tracking) and held references (ie Held Inventory Tracking), where used.
- The quantity entered must be in the same unit of measure as the booked WIP inventory.

Press **Enter** on the WIP Inventory Hold Entry screen to display the Held Reference window.

Functions:

F19

Display current held WIP inventory details.

System Updates:

On update:

- A transaction with an activity type of HLDWIP (hold WIP inventory) and a reporting type of 30 (held WIP) is generated.

Held Reference Window

Use this window to split down the quantity to be held by reference.

Press **Enter** on the WIP Inventory Hold Entry screen to display the Held Reference window.

Fields:

Held Reference

If 1 has been entered in the Held Inventory Tracking field on the Organisational Models screen, then entry of this field is mandatory; otherwise entry is optional.

Enter a reference of up to 15 alphanumeric characters in upper case.

Reason Code

Entry of a reason code is mandatory.

Codes are defined on the Style Inventory Management descriptions file, against type MOVR.

Press **Enter** on the Held Reference window to display the Product Distribution window.

This window displays only if the reporting level is greater than the Style level (ie not set to 0).

Held WIP Inventory Details Window (F19)

This window displays the stockroom, lot control number, booking date and held quantity for each held reference.

 *Note: This window is also accessible from the Release held Inventory and Scrap Held Inventory functions.*

 **F19** on the WIP Inventory Hold Entry screen opens a window displaying held WIP details.

Product Distribution Window

Use this window to:

- View the colours, sizes or colours/sizes related to the selected held reference.
- Input sub-totals for the colours, sizes or colours/sizes related to the selected held reference at the appropriate reporting level.

Press **Enter** on the WIP Held Inventory Release Entry screen to display the Product Distribution window.

Press **Enter** on the WIP Held Inventory Scrap Entry screen to display the Product Distribution window.

Press **Enter** on the Held Reference window to display the Product Distribution window.

Press **Enter** on the WIP Inventory Scrap Entry screen to display the Product Distribution window.

Press **Enter** on the WIP Location Transfer screen to display the Product Distribution window.

Press **Enter** on the WIP Inventory Reallocation screen to display the Product Distribution window.

The Production Distribution window displays only if the reporting level is greater than the Style level (ie not set to 0).

Release Inventory

2/P4W

Use this option to release WIP inventory previously booked as held, either at an operation or via the Hold Inventory option. This option releases WIP inventory at the appropriate reporting level.

All transactions must be recorded against count point operations.

By releasing the inventory, you allow the inventory to move to the next operation.

WIP Held Inventory Release Entry Screen

To display this screen, select Release Inventory from the menu.

MJ212	ZS - Style Demonstration Co.	User GBJBMS	29/03/96 12:06:48

05-26 SF MW KS IM II KENB20A PET166S2			

Fields:

Date

Specify a transaction date; entry is mandatory. The system will default to the current date but this can be overtyped if required.

Shift

If entered, this should be a shift number on the shift profile in force at the relevant machine on the day specified.

WIP Location

Enter the machine WIP location at which the WIP inventory transaction is being recorded.

The system validates the quantity you enter against the held balance at this location.

Warning: it is essential that the machine WIP location relates to the order/operation at which the transaction is being recorded. This is of particular importance when bookings have been made to more than one machine with different associated WIP locations.

Order

Enter the relevant production order number.

Operation

Enter the relevant operation sequence.

*Note: When a valid operation has been entered, the system will enable **F19** allowing you to review WIP inventory currently held at the designated WIP location*

Lot Number

If the WIP Lot Tracking flag on the organisational model is set to 1 (yes) then all lot controlled item bookings are made against a lot number. In such circumstances it is mandatory to enter the held lot reference; this provides an additional validation parameter when comparing the lot available quantity to the entered lot quantity.

Held Reference

If a held reference exists for the WIP (ie the Held Inventory Tracking flag on the organisational model is set to 1), then entry is mandatory; otherwise it is optional. Enter a reference of up to 15 alphanumeric characters in upper case.

Quantity

This is the total quantity to release.

- The quantity must be less than or equal to the quantity recorded as held at the order/operation at the WIP location specified.
- Quantities must also correlate to lot control references (WIP Lot Tracking) and held references (Held Inventory Tracking), where used.
- The quantity entered must be in the same unit of measure as the booked WIP inventory.

Unit Of Measure

Leave blank to display the issuing UoM.

Reason Code

Enter a reason code. Codes are defined on the Style Inventory Management, descriptions file, against type MOVR.

Press **Enter** on the WIP Held Inventory Release Entry screen to display the Product Distribution window.

This window displays only if the reporting level is greater than the Style level (ie not set to 0).

Functions:

F16

Open the Inventory Receipts window.

F19

Display current held WIP inventory details.

System Updates:

On update:

- A transaction with an activity type of RELHLW (release held WIP) and a reporting type of 31 (WIP held release) will be generated.

Inventory Receipts Window (F16)

To open this window, select **F16=Receipt Details** from the WIP Held Inventory Release Entry screen.

Note: If the planned receiving stockroom is warehouse controlled, then this window displays automatically.

Use this window to confirm receipts, together with standard facilities for booking finished goods.

This window is described fully under the Production Order Booking option.

Scrap Held Inventory

1... 3/P4W 2...

Use this option to scrap WIP inventory booked in previously as held at an operation or via the WIP Held Inventory Release Entry option.

In doing so, you allow the Held WIP inventory balance to be decreased.

This option scraps WIP inventory at the appropriate reporting level.

All transactions must be recorded against count point operations.

Select Scrap Held Inventory on the menu to display the WIP Held Inventory Scrap Entry screen.

MJ212	ZS - Style Demonstration Co.	User GBJBAMS	29/03/96 12:07:25

05-26	SF	MM	KS IM II KENB20A PET166S2

Fields:

Date

Specify a transaction date; entry is mandatory. The system will default to the current date but this can be overtyped if required.

Shift

If a shift is entered, it should be a shift number on the shift profile in force at the relevant machine on the day specified.

WIP Location

Enter the machine WIP location at which the WIP inventory transaction is being recorded. The system validates the quantity you enter against the held balance at this location; it is essential that the machine WIP location relates to the order/operation at which the transaction is being recorded. This is of particular importance when bookings have been made to more than one machine with different associated WIP locations.

Order

Enter the relevant production order number.

Operation

Enter the relevant operation sequence.

*Note: When a valid operation has been entered, the system will enable **F19** allowing you to review WIP inventory currently held at the designated WIP location*

Lot Number

If the WIP Lot Tracking flag on the organisational model is set to 1 (yes) then all lot controlled item bookings are made against a lot number. In such circumstances it is mandatory to enter the held lot reference; this provides an additional validation parameter when comparing the lot available quantity to the entered lot quantity.

Held Reference

This field allows you to specify which of the held WIP inventory to scrap.

If the Held Inventory Tracking flag on the organisational model is set to 1 (yes) then entry is mandatory; otherwise it is optional. Enter up to 15 alphanumeric characters in upper case.

Quantity

The total quantity to scrap.

- The quantity must be less than or equal to the quantity recorded, as held at the order/operation at the WIP location specified.
- Quantities must also correlate to lot control references (WIP Lot Tracking) and held references (Held Inventory Tracking) where used.
- The quantity entered must be in the same unit of measure as the booked WIP inventory.

Unit Of Measure

Leave blank to display the issuing UoM.

Reason Code

Entry of a reason code is mandatory.

Codes are defined on the Style Inventory Management, descriptions file, against type MOVR.

Press **Enter** on the WIP Held Inventory Scrap Entry screen to display the Product Distribution window.

Functions:

F19

Display current held WIP inventory details.

System Updates:

On update:

- A transaction with an activity type of SCHLWP (scrap held WIP) and a reporting type of 32 (WIP held to scrap) will be generated.

Scrap Available Inventory

Use this option to scrap WIP inventory that is currently available (ie either booked in previously as good or released after being held). In doing so, you allow the WIP inventory balance to be decreased.

This option scraps WIP inventory at the appropriate reporting level.

WIP can be scrapped at any operation, irrespective of its reporting type. That is, non count point operations can be selected.

- At a count point operation, only existing, available WIP may be scrapped. The transaction reduces the available balance at the operation
- At non count point operations (backflush), the balance is reduced at the prior count point if there is one. Materials are backflushed and costs recovered for the operations after the previous count point up to and including the operation at which scrap is recorded

*This option does not scrap held WIP inventory.
Use the WIP Held Inventory Scrap Entry Screen instead.*

Select Scrap Available Inventory on the menu to display the WIP Inventory Scrap Entry screen.

MJ215 ST - Style Test & QA Company User QASTYLE 15/07/97

5-26 SA MW KS CL IM DM II KENB20A KB PET159S1

Fields:

Date

Specify a transaction date; entry is mandatory. The system will default to the current date but this can be overtyped if required.

Shift

If entered, this should be a shift number on the shift profile in force at the relevant machine on the day specified.

WIP Location

Enter the machine WIP location for which the WIP balance is to be reduced because of scrap occurring. The location may be any location where order/operation balances are held.

If the operation to be entered is not a count point, then the WIP location should exist at a prior count point operation.

Order

Enter the relevant production order number.

Operation

Enter the relevant operation sequence. The order/operation must exist and have a recorded WIP balance.

The transaction will assume that the activity associated with the operation has taken place, and will backflush materials and recover costs accordingly.

WIP scrap may be recorded for any valid operation:

- If it is a count point, then the available WIP balance will be reduced for that operation.
- If it is not a count point, the balance will be reduced at the previous count point, and materials and costs will be recovered for all operations following the count point operation up to and including the operation at which the booking is made.

Lot Number

If the WIP Lot Tracking flag on the organisational model is set to 1 (yes) then all lot controlled item bookings are made against a lot number. In such circumstances it is mandatory to enter the held lot reference; this provides an additional validation parameter when comparing the lot available quantity to the entered lot quantity.

Scrap Reference

The scrap reference applies to all variants scrapped. Enter a reference by which this transaction may be identified. Entry is optional.

Quantity

Enter the total quantity to scrap.

- The quantity must be less than or equal to the available quantity at the order/operation at the WIP location specified.
- Quantities must also correlate to lot control references (WIP Lot Tracking) where used. Enter the quantity in the same unit of measure as the booked WIP inventory.

Unit Of Measure

Leave blank to display the issuing UoM.

Reason Code

Entry of a reason code is mandatory. Codes are defined on the Style Inventory Management, descriptions file, against type MOVR.

Press **Enter** on the WIP Inventory Scrap Entry screen to display the Product Distribution window.

System Updates:

On update:

- A transaction with an activity type of INVSCR (scrap WIP inventory) and a reporting type of 33 (scrap WIP) will be generated.

Transfer Location

1... **5/P4W**
2...

Use this option to move WIP inventory from one WIP location to another. You may transfer both available (ie booked good) and held WIP inventory.

This option is useful should you wish to use a different workstation with different WIP locations on the next operation.

This option moves WIP inventory at the appropriate reporting level.

Select Transfer Location on the menu to display the WIP Location Transfer screen.

MJ211	ZS - Style Demonstration Co.	User GBJBAMS	29/03/96 12:08:12

Fields:

Date

Specify a transaction date; entry is mandatory. The system will default to the current date but this can be overtyped if required.

Shift

If entered, this should be a shift number on the shift profile in force at the relevant machine on the day specified.

From Location

The WIP location 'from' which inventory is to be transferred.

To Location

The WIP location 'to' which inventory is to be transferred.

Order

Enter the relevant production order number.

Operation

Enter the relevant operation sequence. The order/operation must exist and have a recorded WIP balance.

Lot Number

If the WIP Lot Tracking flag on the organisational model is set to 1 (yes) then all lot controlled item bookings are made against a lot number. In such circumstances it is mandatory to enter a lot reference; this provides an additional validation parameter when comparing the lot available quantity to the entered lot quantity.

Inventory Status

Inventory booked good (available) 0 or held 1 may be transferred. The system will validate the quantities booked good or held at the order/operation to ensure that no more than exists is moved.

Held Reference

The held reference applies to all variants transferred at one time. Entry of a held reference is mandatory if the Held Inventory Tracking flag on the Organisational Model is set to 1 (yes); and transfer of held WIP is requested.

Note: The reference entered must be an existing reference relating to the inventory being transferred; the system will force entry of upper case characters

Quantity

The total quantity to transfer.

- If transferring held inventory, enter a quantity less than or equal to the held quantity at the order/operation at the WIP location specified.
- If transferring available inventory, enter a quantity less than or equal to the good quantity at the order/operation at the WIP location specified
- Quantities must also correlate to lot control references (WIP Lot Tracking) and held references (Held Inventory Tracking) where used.
- Enter a quantity in the same unit of measure as the booked WIP inventory.

Unit Of Measure

Leave blank to display the issuing UoM.

Reason Code

Entry of a reason code is mandatory. Codes are defined on the Style Inventory Management, descriptions file, against type MOVR.

Press **Enter** on the WIP Location Transfer screen to display the Product Distribution window.

This window displays only if the reporting level is greater than the Style level (ie not set to 0).

System Updates:

On update:

- If available inventory is transferred, a transaction with an activity type of TRFWIP (transfer WIP) and a reporting type of 40 (WIP available location transfer) will be generated.
- If held inventory is transferred, a transaction with an activity type of TRFHLD and a reporting type of 41 (held WIP location transfer) will be generated.

Reallocate Inventory

6/P4W

Use this option to transfer WIP inventory from one production order to another.

For example, this option is useful where inventory has become redundant or trapped at a WIP location. (This situation can occur when the production order against which the inventory is booked closes via booking routines or the order completion facility.)

To reallocate WIP, the two production orders must:

- Have the same product code.
- Have the same reporting level.
- Use the same planning route.
- Be of order type 1 (standard orders).

In addition:

- The deallocate order must be at status 8 (closed).
- The reallocate order must be at status 3 (released) or 4 (active).

Deallocation is carried out on an operation by operation basis, creating a free WIP balance. You can reallocate the balance on the same basis to a different order.

Select Reallocate Inventory on the menu to display the WIP Inventory Reallocation screen.

MG220	ST - Style Test & QA Company	User QASTYLE	16/07/97 10:02:06

Fields:

Date

Specify a transaction date; entry is mandatory. The system defaults to the current date which you can overtype.

Shift

If a shift is entered, then this should be a shift number on the shift profile in force at the relevant machine on the day specified.

From WIP Location

Enter the machine WIP location at which you wish to record the free WIP inventory.

To WIP Location

Enter the machine WIP location to which you wish to reallocate the free WIP inventory.

From Order

Enter the production order from which you wish to deallocate inventory. The order must have an order type of 1 (standard order) and a status of 8 (complete).

To Order

Enter the production order to which you wish to reallocate inventory. The order must:

- Have an order type of 1 (standard order).
- Have a status of at least Released.
- Be for the same parent style and route as the deallocated order.

From Operation

Enter the operation from which you wish to deallocate WIP inventory.

To Operation

Enter the operation to which you wish to reallocate WIP inventory. You must allocate WIP inventory by item/lot/operation.

From Lot Number

If the WIP Lot Tracking flag on the Organisational Model is set to 1 (yes), then all lot controlled item bookings are made against a lot number.

In such circumstances, you must deallocate WIP inventory on a lot-by-lot basis.

To Lot Number

If the WIP Lot Tracking flag on the Organisational Model is set to 1 (yes), then all lot controlled item bookings are made against a lot number.

In such circumstances, you must reallocate WIP inventory on a lot-by-lot basis.

Quantity

Enter the quantity of WIP inventory to reallocate.

Reason Code

Codes are defined on the Style Inventory Management, descriptions file, against type MOVR. (Mandatory.)

Press **Enter** on the WIP Inventory Reallocation screen to display the Product Distribution window.

System Updates:

On update:

- On deallocation, a transaction with an activity type of DEALLW (deallocated WIP) and reporting type 09 (deallocate WIP from a production order) will be generated. DEALLW also incorporates the allocation process.

Adjust Inventory

1...
2... **8/P4W**

Use this option to increase or decrease the balance of available or held WIP inventory or subcontractor inventory.

Make your adjustments at product code/lot/operation level.

Use this option to set up WIP balances when you first install the system, as part of initial stock take-on.

Select Adjust Inventory on the menu to display the WIP Inventory Adjustments screen.

MJ210ST - Style Test & QA CompanyUser QASTYLE30/06/9714:35:02

Reason Code.....?

F3=Exit F4=Prompt

05-26SfMKKSIMIIKENB20APET149S2

Fields:

Date

Specify a transaction date; entry is mandatory.

The date defaults to the current date which you can overwrite.

Shift

If entered, this should be a shift number on the shift profile in force at the relevant machine on the day specified.

WIP Location

Enter the machine WIP location for which the WIP balance is to be adjusted.

The location will usually be the location associated with the machine on the production route of the order operation to be entered.

For subcontracted balances, the WIP location will be that at the operation prior to that designated subcontracted.

Order

Enter the relevant production order number.

Operation

Enter the relevant operation sequence.

- The order/operation must exist and have a recorded WIP balance.
- For the final operation on a route, you can adjust held WIP balances only.
- Quantities booked as good or available at these operations are automatically transferred to inventory and so do not remain in WIP.
- For subcontractor balance adjustments, you must enter the operation prior to that designated as subcontracted. This operation will have two relevant balances:
 - WIP booked at the operation.
 - Subcontractor balance generated as a result of moving inventory via Subcontractor WIP Shipper.

To update the first balance, enter an operation sequence without a subcontractor code.

To adjust the latter balance, enter a subcontractor code.

Product Code

Enter the product code for the product for which WIP inventory needs adjusting. The product code has three parts:

- Style.
- Colour.
- Size.

The product code must be in the same format as required by the reporting level.

Note: You can adjust only one variant at one time. This is because you can adjust WIP inventory up and down.

Lot Number

If the WIP Lot Tracking flag on the organisational model is set to 1 (yes) then all lot controlled item bookings are made against a lot number. In such circumstances it is mandatory to enter the lot reference to be adjusted; this provides an additional validation parameter when comparing the lot available quantity to the entered lot quantity.

Subcontractor

If the subcontractor balance is to be adjusted, enter the relevant subcontractor (supplier) code.

Shipper Number

If the Shipper Tracking flag on the organisational model is set to require tracking, then all movements to and from a subcontractor are tracked by shipper number

(despatch note) number. In such circumstances, any scrapped quantity must correlate to a quantity shipped on the designated shipper number.

Inventory Status

Inventory booked good (available) 0 or held 1 may be adjusted.

Note: Adjust held inventory cannot be used if a subcontractor has been entered, as no held balance exists for subcontracted WIP inventory

Held Reference

This field is only relevant if an adjustment is being made to held inventory. Entry of a held reference is mandatory if the Held Inventory Tracking flag on the Organisational Model is set to 1 (yes).

Note: The reference entered must be an existing reference relating to the inventory balance being adjusted; the system will force entry of upper case characters

Quantity

Enter the quantity by which you wish to adjust the WIP inventory balance.

Enter a positive quantity to increase the balance, or a negative quantity to decrease the balance.

Note: A negative quantity must be entered with a trailing minus sign (-) suffix not prefix; that is, enter 20- and not -20

If the adjustment is negative, the system will validate that the same unsigned quantity is less than or equal to the current appropriate balance to be updated.

Unit Of Measure

Leave blank to display the issuing UoM.

Reason Code

Entry of a reason code is mandatory.

Codes are defined on the Style Inventory Management, descriptions file, against type MOVR.

System Updates:

On update:

- If adjusting the available quantity, a transaction with an activity type of INVADJ (inventory adjustment) and reporting type 35 (WIP adjustment) will be generated
- If adjusting the held quantity, a transaction with an activity type of HLDADJ (adjust held WIP) and reporting type 36 (WIP adjustment held) will be generated

Total Stock Status

11/P4W

Use this option to review WIP inventory and stockroom balances.

Select Total Stock Status on the menu to display
Total Stock Status Enquiry screen 1.

Select Total Stock Status on the menu to display Total Stock Status Enquiry screen 1.

Fields:

(Untitled)

Select. Select an operation to display actual WIP inventory balances, or details of transactions which generated the balances.

1 - Review WIP inventory in detail. The window displays balances by WIP location; and provides further functions to display lot numbers, held references, operation schedule and subcontractor details. Available is on-hand less held less subcontractor.

2 - Review WIP inventory movements.

Functions:

F15

Access an MPS or MRP enquiry, depending on whether the Planning Type flag for the item has been set to 0 (MRP) or 1 (MPS).

F16

Display stockroom inventory balances.

F17

Access the Inventory Availability enquiry.

Subcontract Stock

12/P4W

Use this option to review subcontractor WIP inventory.

Select Subcontract Stock on the menu to display
Subcontract Stock Status Enquiry screen 1.

Subcontract Stock Status Enquiry Screen 1

Select Subcontract Stock on the menu to display Subcontract Stock Status Enquiry screen 1.

Fields:

Org. Model

Enter the 'live' organisational model.

Subcontractor

Enter the subcontractor code.

Press **Enter** on Subcontract Stock Status Enquiry screen 1 to display Subcontract Stock Status Enquiry screen 2.

Subcontract Stock Status Enquiry Screen 2

Press **Enter** on Subcontract Stock Status Enquiry screen 1 to display Subcontract Stock Status Enquiry screen 2.

Inventory Movements

14/P4W

Use this option to review WIP inventory movements. You can look at the movements for an item exploded to full product detail level.

The program displays transactions in date, transaction number and reporting type sequence. Within the item, the program displays transactions for the operation, reporting type, date and WIP location ranges specified.

Select Inventory Movements on the menu to display WIP Inventory Movements screen 1.

WIP Inventory Movements Screen 1

Select Inventory Movements on the menu to display WIP Inventory Movements screen 1.

Fields:

Org Model

Enter the 'live' organisational model.

Product Code

Enter a product code for the product whose movements you wish to review. To include all items, leave blank. The product code has three parts:

- Style.
- Colour.
- Size.

Enter exact matches for the product codes.

Note: This option does not treat blank colour and blank size fields as wildcard entries.

Operation

Enter an operation or leave blank to include all operations.

Trans Type

Indicates whether you want to enquire on transactions affecting on-hand or held inventory balances.

1 - On-hand. these are generated by routines associated with a transaction type of 70 (WIP movement).

On-hand=Available plus Held plus Subcontractor balances.

2 - Held. These are generated by routines associated with a transaction type of 71 (change held balance).

Reporting Type

Reporting types are system defined and action specific updates to the database. A reporting type is never prompted for or entered directly during any booking or reporting routine but is invoked as a consequence of the activity type to which it is linked.

Each reporting type is linked to a set of predefined transaction types which are used by the Transaction Manager to perform required updates to the database.

Note: A reporting type may be associated with more than one activity type; although an activity type can only be linked to one reporting type.

Reporting type descriptions are displayed against each listed transaction.

Date Range

Enter a date range or leave blank to include all dates.

WIP Loc Range

Enter a WIP location range or leave blank to include all locations.

Press **Enter** on WIP Inventory Movements screen 1 to display WIP Inventory Movements screen 2.

WIP Inventory Movements Screen 2

Press **Enter** on WIP Inventory Movements screen 1 to display WIP Inventory Movements screen 2.

```

Fields:

The display shows for each transaction:

- Date the transaction was enacted
- System maintained transaction (audit) number
- Reporting type description
- Activity type; which may be user-defined or system dependent
- WIP location at which the movement was recorded
- Operation sequence

Movement quantity; negative values indicate a transfer out of the WIP location.

(Select)

- 1 - Display the detailed WIP inventory movement.

Stock Status And Valuation

1... **21/P4W**
2...

This report prints work-in-progress inventory balances at machine WIP locations. WIP balances are held at count point operations defined on production routes. Three balances are maintained at each order / operation:

- On-hand.
- Held.
- Subcontractor.

The last two may optionally be printed on the report.

If a count point operation is the last operation on a route, then it can only have a WIP held balance; that is, no on-hand or subcontractor.

If WIP valuation is requested, then the balances will be valued using the standard operation costs on the costing route for the on-hand quantities.

Select Stock Status and Valuation on the menu to display the Stock Status Report Selection screen.

```

05-30  SA  MK  KS  IM  II  KENB20A  PET149S2

```

Fields:

Organisational Model

Enter the 'live' organisational model.

WIP Location Range

Enter a WIP location range or leave blank to include all locations.

Product Code

Enter a product code range, exploded to full product detail if required. To include all items, leave blank. The product code has three parts:

- Style.
- Colour.
- Size.

To list all colours for a style, leave the colour field blank. To list all sizes for a style, leave the size field blank.

Order Range

Enter a production order number range or leave blank to include all orders.

Include Subcontract Details

Indicates whether or not WIP balances at subcontractors should be included on the report.

Include Held Details

Indicates whether or not held WIP balances should be included in the report.

The held total is included in the on-hand balance and has no effect on the valuation of work-in-progress.

Include Valuation

Indicates whether WIP balance values will be printed on the report. The value of a WIP balance is calculated by multiplying the on-hand quantity at the operation by the standard operation cost on the costing route.

If the report is sequenced by item, the value of all operation balances for the item will be added together and one total printed

If the report is sequenced by WIP location, the value of all operation balances for each item at the WIP location will be added together and a total printed for each item

0 - Exclude valuation.

1 - Include valuation.

Only Report Negative Inventory

The option is given to restrict the scope of the report to negative WIP inventory balances. This may be used to identify imbalances.

0 - Report all inventory (default).

1 - Only report negative balances.

Sequence

Enter 1 against the sequence required.

Held Inventory

1...
2... **22/P4W**

Use this option to print a report showing held WIP inventory balances at machine WIP locations for a selected product. Balances are held at count point operations defined on the style's production route.

If you select valuation, balances are valued using the standard operation costs on the style's defined costing route.

 Select Held Inventory on the menu to display the Held WIP Inventory Stock Status Report Selection screen.
