Chapter 2

Processing

Types Of Stock Movement

The primary functions of the Inventory Management application are to record stock movements and determine, at any moment, the current stock levels. In order to achieve this, a number of different types of stock movements are provided. This section looks at those movements, defined here as inventory transactions and stock transfers.

Transactions

Whilst provision is made to record these transactions within Inventory Management, the application does form part of an integrated business system and many transactions are more easily performed by other Style applications. (For example, Purchase Management handles the receipt of goods, and Sales Order Processing the despatch). Stock counting and housekeeping are therefore the main movements transacted solely within the Inventory Management application.

When transactions are performed using the Inventory procedures the format of the entry is the same for all types. In order to simplify control, one procedure processes a single transaction type. The first screen enables common data to be entered for a batch of movements, this reduces the amount of keying required. The second screen that is displayed allows one movement to be entered at a time.

The full range of movements made by Inventory Management are detailed in the following pages. This includes an indication of the balances which are updated by each movement type.

A full explanation showing the first screen which is common to all, is given for the first transaction (customer order issue). The relevant differences for the other types of movement transaction are then outlined in detail for each section.

Note: If MRP is on-line and the Unplanned Inventory Transaction reason code is active, any sundry issues or receipts trigger a flag for the next MRP run.

The transactions covered by this application are accessed from within Inventory Management and are listed below:

- Customer Order Issue.
- Sundry Issue (miscellaneous issue).
- Purchase Order receipt.
- Sundry Receipt.
- Adjust Physical Stock.
- Adjust Allocated Stock.
- Adjust Frozen Stock.
- Record Purchase Order.
- Carton Stock Adjustment.

Customer Order Issue

I/STINP

This is used to record the issue of stock which has previously been allocated to an individual customer order.

Record Customer Order Issue Screen 1

This screen enables the entry of the default data which is relevant to the current batch of Inventory movements (in this case it is customer orders).

 *This screen is basically the same for all the transactions within processing.*

Narrative.....

Reason code.....? _

F3=Exit F4=Prompt

05-26 SF ML KS IM II KENB20A PET178S2

Fields:

Stockroom

Enter up to two alphanumeric characters which specify the stockroom. The stockroom must exist on the company profile. This is a mandatory field.

Reference Number

Enter up to fourteen alphanumeric characters which specify the reference number of the movement. This must be a unique number per stockroom.

Reference Date

Enter a valid date to specify the reference date. This field is mandatory and defaults to today's date. If the date the movement actually took place is not the same as today's date then you may change the reference date. The reference date is used to look up the table of period and week end dates set up by the Period/Week end file, to decide the week and period numbers for ageing the stock movement and history records.

 *The reference date cannot be greater than today's date.*

 *The period will be either the current period or current +1.*

Reference Type

Enter up to three alphanumeric characters which specify the reference type. You can use the reference type as a mnemonic to describe the reference number, i.e. REQ may indicate that the reference number is a store requisition note number.

The reference type must be defined on the descriptions file against major type TRAN.

Narrative

Enter up to twenty alphanumeric characters which specify the narrative associated with the movement.

Reason Code

Enter a reason code chosen from those defined on the descriptions file against Major Type MOVR.

All of the above information is written to the movement history and is available for display and reporting, to aid recognition and analysis.

Press **Enter** to accept the entered details and display the screen for entry of the individual movements.

Record Customer Order Issue Screen 2

 This screen is displayed when you press **Enter** on the initial Customer Order Issue screen.

It enables the entry of an individual customer's order issue details.

IN009		ST - JBA System Test Company		USER GBJBARW2		8/11/95 14:39:47	
Record Customer order issue							
Stockroom.....?.		WH		The Warehouse			
Customer.....?		_____					
Product Code.....?		_____

Ref No. Date & Type..		MRLA		8/11/95		A .?	
Narrative.....		_____					
Movement Reason....?		B		Move from A to B			
F3=Exit F4=Prompt		07-24		F12=Previous		F16=Matrix	
SF		MK		KS		IM II KENB20A PET178S2	

 Enter the following details for the issue:

Fields:

Stockroom

Enter up to two alphanumeric characters to specify the stockroom from which the customer's order will be issued. The value input on the Record Customer Order Issue Defaults Screen will be displayed as a default, but it may be changed if necessary.

Customer

Enter up to eleven alphanumeric characters to specify the customer to which the issue is being made.

Product Code

Entry of the product code can be either the full items code (15 characters) or the nine character style code with **F16** available to select the matrix.

The **F16=Matrix** function is not available if Warehousing is in use for this stockroom.

Movement Qty

Enter up to eight characters, (zero decimals) to specify the total quantity being issued for the style. If you wish to enter a negative quantity to correct a previous over issue, then key the quantity followed by a minus ('-') sign and press the Field Exit key.

Lot

Enter up to fifteen alphanumeric characters to specify the lot from which this part is to be issued. If the product is stock recorded at lot, serial or bin level (as specified by the batch control indicator for the product) then the lot code must be entered. A prompt is provided to display available lots.

Quantity Units

Enter the unit of measure code (as defined on the descriptions file against Major Type UNIT), which defines the unit of measure in which the movement quantity is expressed. Only those units defined for the product are allowed. Unless it is changed, this unit will default to the issue unit for this particular product/stockroom.

Cost/Unit

Enter up to fifteen numeric characters, five decimals, which specify the cost/unit for this movement. If the movement is a goods receipt transaction and latest, average or FIFO costing is in use, this movement cost will be used to value the movement. Otherwise the movement will be valued according to the costing method defined for the product/stockroom.

Cost/unit is not used for issues.

The reference number, date and type, the narrative and movement reason will default to the values input on the Record Customer Order Issue Defaults Screen. However, these may be amended for an individual movement.

Press **F16=Matrix** to display the matrix showing all available colour / size / fitting options for the style. The total quantity entered can now be divided between the colours and sizes / fittings. The quantities entered in the matrix must equal the total quantity for the style, entered on the Record Customer Order Issue Defaults Screen. you must press **Enter** to validate and accept.

When you press **Enter**, the three units of measure for the part are displayed. The issue units of the product at this particular stockroom are highlighted in reverse image as the default units. However, the screen may still be changed.

The screen will continue to redisplay until no more changes have been made, in this case pressing **Enter** will process the movement and prompt for the next product number.

When the batch of movements has been entered and the last movement has been processed, you press **F12=Previous** to return to the Record Customer Order Issue Defaults Screen.

The following updates are performed for each customer order issue (at the style/colour/size/fitting level):

- The movement quantity is subtracted from the physical stock and allocated stock for the product/stockroom.
- Available stock for the product/stockroom is recalculated.
- Usage figures for the product/stockroom are updated.

- The last issue date for the product/stockroom is updated.

Special Functions:

F16

Matrix of colours / sizes / fittings

Sundry Issue

2/STINP

Selecting this option displays the Record
Miscellaneous Issue Screen.

Record Miscellaneous Issue Screen

This transaction enables the entry of issue details for which no prior allocation has taken place.

See 'Customer Order Issue' for a more detailed explanation of the movement screens.

```

Fields:

Stockroom

Enter the stockroom relevant to the receipt details. A prompt is available.

Supplier

Enter up to eleven alphanumeric characters to specify the supplier from whom the part has been received.

The updates associated with this transaction type are as follows:

- Add to physical stock.
- Subtract from on-order.
- Recalculate available stock.
- Recalculate costs (average, latest, and the creation of a FIFO record, depending on costing method).
- Update date of last receipt.

As costs are being re-calculated, a cost should be entered if any form of actual costing is being used. A new Lot/Batch record is created if the product is lot controlled and if a lot of the stated number does not already exist.

Sundry Receipt

4/STINP

Selecting this option displays the Record
Miscellaneous Receipt Screen.

Record Miscellaneous Receipt Screen

This transaction enables the recording of the receipt details for which no record of supply has been made. This routine may be used to set the initial shelf stock at the system implementation stage.

See Customer Order Issue for a more detailed explanation of the movement screens.

The following field details are required to process a receipt:

Fields:

Received From

Enter up to eleven alphanumeric characters to specify the source of the receipt.

The updates associated with this transaction type are as follows:

- Add to physical stock.
- Recalculate available stock.
- Recalculate costs (average, latest, and the creation of a FIFO record, depending on costing method).
- Update date of last receipt.

As costs are being recalculated, a cost should be entered if any form of actual costing is being used. A new Lot/Batch record is created if the product is Lot controlled and a Lot of the stated number does not already exist.

Adjust Physical Stock

5/STINP

Selecting this option displays the Record Stock Adjustments Screen.

Record Stock Adjustments Screen

This transaction enables the entry of adjustments to stock balances, normally following a stock take and stock reconciliation.

See 'Customer Order Issue' for a more detailed explanation of the movement screens.

```

Fields:

Carton Style

Enter up to nine numeric characters to specify the style associated with the carton being opened. If the carton has a colour/size/fitting element then the matrix will be displayed to allow the colour and size / fitting of carton to be selected.

Piece Style

Enter up to nine numeric characters to specify the style associated with the pieces within the carton.

Inc Available

Include Available. If opening a carton to retrieve a particular number of pieces of a particular colour and size / fitting, then by using the 'include available flag' the system will suggest a number of cartons to open. The number of cartons to open will take into account any loose pieces that are available in the warehouse e.g.

If a carton contains 1 red small and 3 red small are required then normally 3 cartons would need to be opened but if 1 loose piece were already available then only 2 cartons need to be opened.

Warehouse

Enter the two alphanumeric characters that specify the warehouse or stockroom that contains the carton and pieces being are being processed.

Calculate Cartons

Enter 1 to enable the system to calculate the number of cartons to be opened as based on the number of pieces required. When processing in this way, the matrix for pieces will be displayed and quantities may be entered.

Press **Enter** to display the Movement Detail Window.

The window is used to enter movement information.

```

F3=Exit F4=Prompt

09-56 SF MW KS IM II KENB20A PET170S2

```

Fields:

Reference

Enter up to fourteen alphanumeric characters which specify the reference number of the movement. This must be a unique number per stockroom.

Date _____

Enter a valid date to specify the reference date. This field is mandatory and defaults to today's date. If the date the movement took place is not the same as today's date then you may change the reference date. The reference date is used to look up the table of period and week end dates set up by period/week end file, to determine the week and period numbers for ageing the stock movement and history records.

The reference date cannot be greater than the current date.

The period will be either the current period or current +1.

Movement Type

Enter up to three alphanumeric characters which specify the movement type. You can use the movement type as a mnemonic to describe the reference number.

The movement type must be defined on the descriptions file against major type TRAN.

Narrative

Enter up to twenty alphanumeric characters which specify the narrative associated with the movement.

Reason Code

Enter a reason code chosen from those defined on the descriptions file against Major Type MOVR.

Carton Cost

The cost will be defaulted from the stockroom balance record. For latest, average and FIFO a piece cost will be calculated where piece cost is carton cost divided by number of pieces within the carton. For standard cost items the standard cost of pieces will not be calculated from the cost of the carton, instead the standard cost of pieces is used.

Press **Enter** to accept the entered details and display the Carton Quantity Screen.

Carton Quantity Screen

This screen is displayed when you enter the pieces required in the matrix screen.

The carton quantity entry screen displays upon entry, either manual or direct from movement details when the calculate carton option is not being used. The physical stock and available stock is shown for information purposes.

Cartons To Open

This allows you to enter the number of cartons to be opened. If you are creating cartons from pieces, enter a negative quantity for the number of cartons to open. This quantity will be pre-set if you use the calculate carton option.

The adjustment is made when you press
F8=Update.

*When the warehousing application is interfaced
you must enter the location details for
Warehousing updates.*

Stock Transfers

When a transfer takes place between two stockrooms there is often not only a physical change in position (which may take some time to accomplish), but also a change in responsibility. Inventory Management has two movements to record these actions, one to Transfer Out and a second to Transfer In.

Record Transfer Out and Confirm Shipment Receipt are used in conjunction to perform the two halves of a stock transfer.

Record transfer In/Out allows you to transfer one or more available items between two stockrooms, immediately. There is no change to the in transit stock balance.

Frozen stock transfers, both single and multi-items, allow you to transfer frozen stock between two stockrooms immediately, in a single operation.

A transfer can only take place if the item is already defined at the 'to' stockroom using the Stockroom Details option within Inventory Maintenance.

If a message indicating that there is insufficient frozen or physical stock in the stockroom for the desired transfer to take place appears at the base of the screen and you wish to proceed with the transfer, you should take the following course of action:

Exit the transfer option. If you are unsure as to which stock balance is preventing the transfer from occurring, take the Item/Stockroom option from Enquiries. This will enable you to view each stock balance for the item/stockroom combination.

You then take the appropriate stock adjustment option: physical, available or frozen, from the Inventory Processing so as to increase that stock balance. Finally return to the Stock Transfer option and continue as before.

Transfer Out

9/STINP

Selecting this option displays the Record Transfer Out Screen.

Record Transfer Out Screen

This transaction enables the recording of the first part of the stock transfer of stock from one stockroom to another.

The movement screens are exactly the same as those detailed in 'Customer Order Issue'.
