Chapter 7

Utilities

Security Issues

The Inventory Management Utilities provide data set-up, housekeeping and database integrity checking facilities. The utilities require exclusive use of the company or sometimes the whole application in order to execute. It is strongly recommended, therefore, that access to these options should be restricted to one or two key users who have responsibility for the total system.

A screen is displayed which states:

Warning: Your request requires exclusive use of the system which is not available.

Warning: Other jobs are already using the system.

If the utility option is selected and there is another user signed onto the Inventory company. A similar message is displayed where exclusive use of the application is required but cannot be achieved.

Copy Company

1... 1/STINU
2...

This procedure is used to create a new company within the Inventory Management application by copying company profile data from one company to another. Any differences, (i.e. Company Name), within the new company can then be established by use of the standard maintenance facility.

Fields:

From Company

Enter the company code of the company from which the data is to be copied.

To Company

Enter the company code of the company to which the data is to be copied. This company code should not already exist within the application.

Rebuild Part Search

2/STINU

This facility is used during installation to build the style search keys. Subsequently it should be used after style maintenance when changes have been made to style descriptions and text and when styles have been added to the style file.

There are no selections or parameters to input; this procedure is submitted directly from the menu.

Set Balance Quantities To Zero

3/STINU

The purpose of this procedure is to reset all the Stockroom Balance records for the nominated company to zero. Under normal circumstances this option should not be used. However, in a test environment there may be a need to zero all stocks for a company.

This procedure runs directly from the menu.

Carton Profile

1... **2...** 4/STINU

This allows the running of cartons to be tailored within a particular company. If a carton profile does not exist then carton processing is not possible.

AP003	ST - JBA System Test Company	USER GBJBARW2	9/11/95
Carton Profile Maintenance			10:47:10
Set total prompt.....	2	Set total.....

F3=Exit			
05-41	SA	MM	KS IM II KENB20A PET178S2

Fields:

Set Total Prompt

Enter the text to be used to prompt the user to enter the total for a set within a carton. This will allow a company's own terminology to be used. This prompt is used by carton maintenance.

Number Of Sets Prompt

Enter the text to be used to prompt the user to enter the number of sets within a carton. This will allow a company's own terminology to be used. This prompt is used by carton maintenance.

Margin In Normal Carton Enquiry

Controls the display of cost and margin information within the carton enquiry. If margin is to be displayed then it maybe as a value or a percentage. This will affect carton enquiry when taken as an option off the menu.

Margin In Enquiry From Item Search

As 'margin in normal carton enquiry' processing except it controls the display of margin when carton enquiry is accessed from item search.

Control Breakdown On Invoices

Controls the printing of a breakdown of the carton in terms of pieces on invoices and credits.

Carton Breakdown On Acknowledgements

Controls the printing of a breakdown of the carton in terms of pieces on acknowledgements, cancellation notes and proforma invoices.

Carton Breakdown On Despatch Notes

Controls the printing of a breakdown of the carton in terms of pieces on despatch notes.

Carton Breakdown On Purchase Orders

Controls the printing of a breakdown of the carton in terms of pieces on purchase orders.

Sales Analysis At Carton Or Pieces

Sales analysis may be updated to reflect sales of cartons or the sale of pieces within cartons.

Press **Enter** to update, or **F3=Exit** to exit without update.

Product Description Refresh

1... 5/STINU
2...

This allows colour and size descriptions held against items and size masks to be updated. When a colour or size description is amended styles set up in this colour or size are not automatically updated. Running this utility will search for all occurrences of this colour or size and update the description.

```

Fields:

Colour Code

Enter the colour code that has had its description amended. Optional entry, search is available.

Size Code

Enter the size code that has had its description amended. Optional entry, search is available.

At least one colour or size code must be entered unless **F13=Refresh All**, is taken to refresh all colours and sizes.

Functions:

F8

Update.

F13

Refresh All Colours and Sizes.

Install AFI Control Data

1... 2... 6/STINU

All postings from Style Distribution to General Ledger are made through the Advanced Financial Integrator (AFI). The procedure is used to create the required Data Dictionary entries, so that AFI is able to reference style.

AP906	ST - JBA System Test Company	USER GBJBARW2	9/11/95 10:50:30
Install AFI Control Data			
Copy From	<u>OSLAPF3</u>	Only amend this, if you have renamed your Style files library,	
Copy To	<u>OSLFIF3</u>	Amend this library to match your Financial Integrator files library, or the Consolidated Financials files library.	
F3=Exit F8=Submit Job			
08-25	SF	MM	KS IM II KENB20A PET178S2

Fields:

Copy From

Enter a library from which to copy the data.

Copy To

Enter a library to which the data will be copied .

Note: The AFI library lists must also be amended to access the style data base. Refer to the Style Installation guide for details.

AFI Test Stock Movements Extract

7/STINU

This function takes a trial extract of data from Inventory Management and creates a General Ledger journal. Note that no actual updating of data takes place, either within Inventory Management or General Ledger. It is purely a paper exercise to simulate the effect of creating the specified journals for the nominated company. Three reports can be generated:

- General Ledger Postings - A list of the postings generated.
- Exceptions Report - Displaying, for example, any balancing postings automatically created for an unbalanced journal.
- Error Report - Displayed error conditions encountered.

Inventory Trial Extract And Update Screen

Select Test from within Inventory Processing Profile/AFI. The Prompt for Inventory Trial Extract and Update screen is then displayed.

Fields:

Source Company

Enter the source company whose data is to be used for this trial extraction.

Work With Inventory Movements Not Yet Processed

Enter 1 if, for the purposes of this trial, you want to use only data which has not been extracted in live operation mode by AFI. Enter a 0 if you wish to specify a range of transaction numbers on which the trial is to be based.

Work With Inventory Movements From And To

This is only relevant if the previous response was 0. Specify here the range of transaction dates in the source application to be used in this trial. If you wish to use only the inventory movements which occurred on a single day, specify the same date in the From and To entries.

A window facility is available to display transactions within the source application which can be used for this trial.

Type Of Journal Definition To Use

There are three valid options here:

- 1 - Use only journal definitions which are specified as being under test.
- 2 - Use only journal definitions which are specified as being live.
- 3 - Use both test and live journal definitions.

Consolidate Postings

Indicate here, by specifying a 1, whether you wish consolidation to take place on those postings defined as consolidatable. A 0 here specifies that no consolidation takes place, even though you may have postings defined as consolidatable.

Press **Enter** to validate the selection screen.

AFI Live Stock Movements Extract

This facility enables you to initiate the extract of Inventory transactions from the Inventory movements file for processing by AFI to create General Ledger journals.

1... **8/STINU**
2...

Inventory To General Ledger Window

Select Live i.e. *Initiate Inventory Extract* from within Inventory Processing Profile/AFI to see the Inventory to General Ledger Window:

Fields:

Company

Specify here the company code of the company for which Inventory transactions are to be extracted.

Transactions are extracted according to the selection criteria set up on your journal condition.

Press **F8=Submit**, to proceed

Size Mask Change Batch Update

9/STINU

This option gives you the ability to commit the size mask batch update to a batch function. A window is displayed to confirm this.

The standard Batch Processing window is displayed. Press **F8=Submit** to submit the update or **F3/F12** to exit without submission.

Company Deletion

10/STINU

The purpose of this procedure is to remove data from the application for one or more selected companies. The process is performed in three steps:

- Copy to a temporary library, the data for the companies to be retained.
- Clear the physical files in the live library.
- Copy back the data from the temporary library to the live library.

On the first screen, you enter the libraries that contain the relevant data for the deletion.

Note: If miscellaneous libraries are present then this option should be run separately for each library.

Press **Enter** to continue.

On the Delete Movement/History Records Screen a list of existing companies is displayed.

Fields:

Select

Enter a 1 against the appropriate company(s) for deletion and press Enter to continue.

Press **F8=Submit** to submit the update or **F3/F12** to exit without submission.

Delete Movement/History Records

11/STINU

The purpose of this procedure is to purge data from the Stock Movement (INP95) and Stock History (INP90) files. A record is deleted from the appropriate file when its week number is prior to the current week being processed, modified by the number of weeks entered as a parameter. Great care must be taken over the control of history deletion, as the Stock History Records are used to determine average usage.

A screen is displayed, which requests the following:

Fields:

No. Of Weeks Movement To Retain

Enter up to three numeric characters to specify the number of weeks of Stock Movements to be retained. The default is 60 weeks. If 999 is entered then all movements will be retained.

No Of Weeks History To Retain

Enter up to three numeric characters to specify the number of weeks of Stock History records to be retained. The default is 60 weeks. If 999 is entered then all history records will be retained.

Press **Enter** to confirm the input parameters, and submit the job to remove movement and history records.

Delete FIFO / Lot Details

1... 12/STINU **2...**

This procedure purges data from the FIFO details file. The option to purge details from the batch/lot file is also included. FIFO records which contain zero balances, and batch/lot records with zero balances and no stock movements are deleted.

IN910	ST - JBA System Test Company	USER GBJBARW2	9/11/95
			10:51:50
FIFO AND BATCH/LOT			
Cut-off Date 9/11/95			
Location (0=NO,1=YES) 0			
Only FIFO cost records up to and including the cut-off date with a zero balance will be deleted			
F3=EXIT			
06-18	SF	MM	KS IM II KENB20A PET178S2

Fields:

Cut Off Date

Enter the cut off date for the FIFO details deletion

Location

Enter 1 if you wish to delete batch/lot details otherwise enter 0.

Cut- Off Date For Location

Enter the Cut-off date for the batch/lot details deletion. This is prompted if location is set to 1.

Press **Enter** to confirm the selection and submit the job.

Database Integrity

20/STINU

The purpose of this procedure is to check the integrity of the parts data across several files. These are:

Item Master - INP35 Size Master - AP015

Stockroom Balance - INP60 Size Masks - AP020

Stockroom Profile - INP20 Colour Master - AP010

Stock Location - INP80 Product Copy - AP036

FIFO Costs - INP83

No automatic adjustments are made but a report is produced highlighting the errors for manual amendment.

The following entries are required:

Fields:

Company Code

Enter the company code of the company for which this integrity processing should be done.

Option

Enter 1 or 2 to specify whether the validation should be top-down or bottom-up (See below for a full explanation of these terms.)

Message Type

Enter 1 if warnings and serious messages should be printed, otherwise leave the default 2, which will cause only serious messages to be printed.

The routine processes are as follows:

Top Down Validation

This function reads the style/product Master Records and performs the following integrity checks:

- The procedure checks that each product has at least one product/stockroom record associated with it. A warning message is printed if this is not the case.
- The procedure checks that a stockroom profile record exists for each stockroom defined on a stockroom balance record. A serious error message is printed if this is not the case.
- The procedure checks that at least one FIFO cost record exists for stockroom balances associated with products for which FIFO costing is specified. A warning message is printed if this is not the case.
- The procedure checks that for FIFO costed products, the sum of the FIFO balance quantities is equal to the stockroom balance physical stock. A serious error message is printed if this is not the case.

- The procedure checks the presence of FIFO records for products which are not FIFO costed. If any such records are found, a serious error message is printed.
- The procedure checks that for lot controlled products the sum of the balance is equal to the stockroom balance physical stock. A serious error message is printed if this is not the case.
- The procedure checks for the presence of lot records for products which are not defined as lot controlled. If any such records are found, a serious error message is printed.

Bottom Up Validation

This function is processed as above, but in reverse, a similar report is then produced.

Allocation Reconciliation

21/STINU

This procedure reconciles allocation totals on stockroom balance records to Sales, Transfer and Production orders.

On the request screen, enter a 1 if you wish the application calculated 'Allocated' quantity to be used to update the stockroom balance record where differences are found.

Enter a 0 if you just require differences to be reported.

Press **Enter** to confirm your selection and submit the job.

On Order Reconciliation

22/STINU

This procedure reconciles on order totals on stockroom balance records to Purchase and Production orders.

On the request screen, enter a 1 if you wish the application calculated order quantity to be used to update the stockroom balance record where differences are found.

Enter a 0 if you just require differences to be reported.

Press **Enter** to confirm your selection and submit the job.

Audit Negative FIFO Records

23/STINU

This procedure audits any FIFO records (with negative quantities) which have resulted from over issues of FIFO costed items.

The procedure is accessed by selecting the option from within Utilities. The individual task is then carried out by batch job.

The procedure runs directly from the menu.

Inventory Processing Profile Maintenance

30/STINU

The processing profile provides information for the Inventory interface program. These profiles provide both user-defined Inventory updates as well as standard updates dictated via other distribution products.

Inventory Processing Profile Maintenance Screen 1

This screen is used to select a processing profile for maintenance.

06-21 SF MW KS IM II KENB20A PET178S2					

Fields:

Profile Code

Profile Code which defines the interface instruction set.

Sequence

Define the sequence of Inventory updates within the profile.

Movement Type

The movement type which is to be generated for a given part.

Stockroom

Enter a 1 for 'from' stockroom or a 2 for the to stockroom. The to stockroom should only be used when two stockrooms are affected by the instruction set in this profile.

Update for Balance Fields

Physical/On Order/Allocated

The Update For Balance Files specify which of the balance fields are to be updated as a result of this transaction.

On Back Order

0 Update not required.

Frozen

1 - Add quantity actually moved.

Bonded

2 - Subtract Quantity Actually Moved.

In-Transit

3 - Add quantity planned to move.

Forward

4 - Subtract quantity planned to move.

Other Stock Balance Updates

Enter 0 for No or a 1 for Yes in each field.

Recalculate Available

Is available stock to be recalculated?

Update cost

Are Latest, Average And FIFO costs to be updated?

Update Usage

Are the usage figures to be updated?

Date Of Issue

Is The Date Of Last Issue To Be Updated?

Date Of Receipt

Is the date of last receipt to be updated?

Stock History: Update For History

Specify the balance to be updated for stock history:

0 - Update not required.

1 - Receipt.

2 - Issue.

3 - Adjustment.

4 - Transfer out.

5 - Supplier orders.

6 - Transfer in.
