Chapter 1

Maintenance

File Maintenance

The application reference data maintenance functions allow the creation and amendment of master files, control records and parameters that are fundamental to the operation of the module.

File Maintenance, particularly of the company control records and Description file, should be executed with extreme care, since errors will have far reaching effects. A proper procedure of authorisation and maintenance checking must be operated as a matter of company policy.

The Master file enquiries are output only versions of the Maintenance procedures and are, therefore, not separately defined.

By identifying a customer or product as special you are highlighting its importance. This does not affect the sales ordering process, but it is used by the Style Sales Analysis module.

Company Profile Maintenance

1/STCO

This procedure enables the creation and maintenance of company details and defaults for the Sales Order Processing. The company is identified by a two character company code. A Sales Order Processing company will interface to Inventory Management, General Ledger and Accounts Receivable companies with the same code.

Tip: See Inventory Management for more Company Profile screen detail.

Warning: If there is a Copy Company option within Utilities, JBA strongly recommend that you use this option to create a new company. You can use the Copy Company option to copy existing parameters and miscellaneous codes to your new company. You can amend these details using your Maintenance and Utility options.

Company Profile Maintenance Screen 1

This screen is displayed when you select the Company Profile option.

Use this screen to select the company that you wish to maintain.

Company Profile Maintenance		USER GBJBARW2	5/12/96 15:01:03

(Untitled)

Select. Enter 1 against the company you wish to maintain.

Enter Company Code To Maintain

Enter a two character code to create a new company.

The second Company Profile Maintenance Screen is automatically displayed.

Company Profile Maintenance Screen 2

This screen is displayed when you press **Enter** after selecting a company.

Use this screen maintain the official name and address of the sales company, together with key control numbers.

Great care must be taken when updating any company data.

Note: If control numbers are changed there may be a risk of duplicate order or invoice numbers being created.

Fields:

Name And Address

The name of this sales company and its trading address.

Note: The following four fields are maintained by the system.

Last Order Number

The last order number processed. This will be automatically incremented by the system. During set-up this should be set to the number prior to the first order number to be used.

Last Dummy Invoice Number

The last dummy invoice number generated by the system.

When you specify that invoice consolidation is done daily, weekly or monthly, System 21 holds the details of each despatch on a dummy invoice. These dummy invoices are then used during invoice consolidation to create a single invoice for each customer.

Last Invoice Number

The last invoice number processed. This will be automatically incremented by the application, but at set-up time should be set to the number prior to the first invoice number to be used.

Last Quote / Proforma Number Used

This number relates to the last pro forma invoice number. This is automatically incremented by the application, but at set-up time should be set at the number prior to the first invoice number to be used.

Last Acknowledgement Printed

The last acknowledgement number which was printed. This is automatically incremented by the application, but at set-up time must be set to the number prior to the first acknowledgement number used.

Last Schedule Number Used

This number is not used by the application. Memo only.

Current Period

The current period to be used for the Sales Order Processing company. This is entered in the format YYMM. This is updated automatically by the period end routine.

Current Week

The current week to be used for the Sales Order Processing company. This is entered in the format YYWW. This is updated automatically by the week end routine.

Default Price List

System 21 allows you to designate one price list in each company as a default price list. This default price list is used if an item price is not found on the customer's normal price list.

0 - No. This company does not have a default price list.

1 - Yes. This company has a default price list.

Season

The default season for the company.

Invoice Consolidation

Enter one of the following to specify the default level for consolidating invoices. You can override this at customer delivery address level.

0 - Despatch Note. Raise an invoice for each despatch note.

1 - Daily. Consolidate all orders despatched to a customer on a daily basis.

2 - Weekly. Consolidate all orders despatched to a customer on a weekly basis.

3 - Monthly. Consolidate all orders despatched to a customer on a monthly basis.

Note: The Invoice Consolidation process uses Inventory Management weeks and periods.

Press **Enter** to confirm the data entered and display Company Profile Maintenance Screen 3.

Company Profile Maintenance Screen 3

This screen is displayed when you press **Enter** on the second maintenance screen.

You use this screen to set up, at company level, the defaults which control the processing logic of Sales Order Processing. When a new account is added it will normally assume these company defaults, unless they are specifically changed. As an order is entered the defaults from the customer are presented. They may then be confirmed or altered for the order. All of the current defaults are presented and any of them may be changed. Most of the fields are direct questions to switch on a function or process.

Fields:

Allow Back Orders

If an attempt to allocate stock fails, your customer may or may not wish the order to be held until stock is available. You can enter the following:

- 0 - No. Back orders are not permitted.
- 1 - Yes. Back orders are permitted.
- 2 - No - Cancel. If no stock is available to allocate, the order will be cancelled.
- 3 - No - Suspend. If no stock is available to allocate, the order will be suspended until stock becomes available.

Allow Part Delivery

If only part of an order is available, your customer may or may not want the part order to be shipped.

- 0 - No. Part delivery is not allowed.
- 1 - Yes. Part delivery is enabled.

The above controls work together in the following fashion:

1

Allow back orders = No.

Allow part delivery = No.

The order is cancelled if stock allocation fails.

2

Allow back orders = No.

Allow part delivery = Yes.

The remainder of the order line is cancelled if stock allocation fails.

3

Allow back orders = Yes.

Allow part delivery = No.

Create a back order for the whole line quantity if stock allocation fails..

4

Allow back orders = Yes

Allow part delivery = Yes

Create a back order at line level for the unallocated stock if allocation fails.

Produce Manual Pick Lists

0 - No. A manual pick list will not be printed for customers at the time of the print picking notes run.

1 - Yes. A manual pick list will be printed for customers at the time of the print picking notes run.

Carriage Charged

This function is for future use.

Apply Small Order Charge

This function is for future use.

Print Acknowledgement

0 - No. Order acknowledgements are not printed.

1 - Yes. Order acknowledgements are to be printed.

Order Reference Required

0 - No. You can optionally enter a customer's order reference during order entry.

1 - Yes. Always enter a customer's order reference during order entry.

Allocation Priority

Batch allocation attempts to allocate orders first by the delivery point's allocation priority, then by order due date. The allocation priority is a number between 00 and 99.

The higher the number, the more favourably the system regards the order. So 99 indicates that batch allocation has absolute priority as soon as stock levels allow. Conversely 00 implies manual allocation.

Priority Increment

When a delivery point's order fails to get stock allocated, the priority is automatically increased to give it a better chance next time.

Note: You cannot override the priority increment for individual delivery points.

Note: Regardless of how many attempts are made to allocate an order the allocation priority will never exceed 98.

Allow Negative Stock

Specify if negative stock is allowed for this company. If negative stock is allowed, you can allocate stock above the available stock balance, when performing a manual allocation.

0 - No. Forced allocation is not allowed.

1 - Yes. Forced allocation is allowed.

Special Customer/Special Product

This flags customers and products as special.

0 - Normal.

1 - Special.

By identifying a customer or product as special you are highlighting its importance. This does not affect the sales ordering process, but it is used by the Sales Analysis application.

Order Priced At

The normal rule for invoice pricing is for it to occur at the point of the order being taken. However, this may be changed so that repricing occurs when the despatch takes place.

1 - Order. The order is priced at order entry.

2 - Despatch. The order is priced at despatch.

3 - Re-price At Despatch. The order is re-priced at despatch.

Pricing Option

Transcriptional order entry allows for pricing to be performed as the order is entered, or when a batch pricing procedure is run. This can improve data entry times.

1 - Interactive. Price during the order entry.

2 - Batch. Price using a batch process.

Press **Enter** to confirm the entries made and display Company Profile Maintenance Screen 4.

Company Profile Maintenance Screen 4

When you press **Enter** on the third maintenance screen this screen is displayed.

You use this screen to enter defaults for order processing. The screen presents the current defaults and any of them may be changed.

Fields:

Order Minimum Value

Enter a minimum order value. A sales order will be suspended automatically if its value is less than this amount.

Picking Note Minimum Value

Enter a minimum value for picking notes. A picking note will not be produced if its value is less than this amount.

Currency Rate Code

The default rate code to identify the currency exchange rates used to convert transaction currency orders into base currency.

Price Suspend In Normal Order Entry

0 - No. The entry of a fixed price during Conversational Order Entry will not suspend the order.

1 - Yes. The entry of a fixed price during Conversational Order Entry will suspend the order.

Price Suspend In Fast Order Entry

0 - No. The entry of a fixed price during Transcriptional Order will not suspend the order.

1 - Yes. The entry of a fixed price during Transcriptional Order will suspend the order.

Credit Check/Suspend In Normal Order Entry

0 - No. If a customer fails their credit check during Conversational Order Entry, the order will not be suspended.

1 - Yes. If a customer fails their credit check during Conversational Order Entry, the order will be suspended.

Credit Check/Suspend In Fast Order Entry

0 - No. If a customer fails their credit check during Transcriptional Order Entry, the order will not be suspended.

1 - Yes. If a customer fails their credit check during Transcriptional Order Entry, the order will be suspended.

Customer Stop Suspend - Normal

0 - No. If the customer is on credit stop, sales orders will not be suspended during Conversational Order Entry.

1 - Yes. If the customer is on credit stop, sales orders will be suspended during Conversational Order Entry.

Customer Stop Suspend - Fast

0 - No. If a customer is on credit stop, sales orders will not be suspended during Transcriptional Order Entry.

1 - Yes. If a customer is on credit stop, sales orders will be suspended during Transcriptional Order Entry.

Allocation Credit Check

0 - No. Do not perform credit check during batch allocation.

1 - Yes. Perform credit check during batch allocation.

Note: These credit checks are only performed during batch allocation, not during manual allocations.

Prevent Allocation When Customer Stopped

0 - No. Do not prevent stock allocation if customer is on credit stop.

1 - Yes. Prevent stock allocation if customer is on credit stop.

Use Purchase Order In Allocation

0 - No. Do not include purchase order quantities in available stock balances for batch allocation.

1 - Yes. Include purchase order quantities in available stock balances for batch allocation.

Use Customer Free Stock

0 - No. Do not use customer specific stock located in the customer's stockroom.

1 - Yes. Use customer specific stock located in the customer's stockroom.

Print Cancellation Notes

0 - No. Do not print cancellation notes for this customer if sales orders are cancelled.

1 - Yes. Print cancellation notes for this customer if sales orders are cancelled.

Press **Enter** to confirm the entries made and
display Company Profile Maintenance Screen 5.

Company Profile Maintenance Screen 5

 This is displayed when you press **Enter** on the fourth maintenance screen.

You use this screen to enter defaults for picking and further defaults for order processing. The current defaults are presented and any of them may be changed.

Fields:

VAT Only Reason Code

Miscellaneous invoice/credit note reason code which will print on a VAT only invoice/credit note. VAT Only Reason Codes are set up in Inventory Description file type RFCR.

VAT Only Style Code

Input a special style code. The application will recognise the code and print a VAT only invoice/credit note.

Small Order Value

A sales order value below this amount will automatically add a small order charge (detailed below) to the order.

Small Order Charge Code

Code for the charge amount held in the Inventory Description file that is applied to sales orders below the small order value.

Last Movement Reference Used

Stock movement reference number for update of General Ledger.

GL Error Account

General Ledger update, Default Error account.

GL Charges Account

General Ledger account for miscellaneous charges.

By Pass Order Control Quantity

You can enter the following:

0 - No. The quantity entered against the style acts as a control quantity against all the individual quantities entered in the colour/size/fit matrix.

1 - Yes. The application enables you to proceed directly to the colour/size matrix during order entry, without first entering the style quantity ordered. Order entry will then sum the total quantities entered in the matrix and place this on the order line for the style.

Customer Division Checking

To make a sale to a customer, a salesman must be allocated to a product division, for example, footwear, clothes, accessories, and that product division must be attributed to a customer. Customer Division Checking is set up during Customer Maintenance, using the Customer Division Maintenance Screen.

0 - No. Disable Customer Division Checking for this company.

1 - Yes. Enable Customer Division Checking for this company.

Extended Credit Checking

Credit check types are set up in the Customer Master file.

0 - Do not apply extended credit checking.

1 - Apply extended credit checking.

Available Stock In Order Entry

0 - Do not show available stock at order entry.

1 - Show available stock balances in colour/size matrix window during order entry.

2 - Show calculated free to sell stock figures in matrix.

Use Packed Quantity In Despatch

0 - No. Do not force packing as a procedural step following picking and prior to despatch.

1 - Yes. Force packing as a procedural step following picking and prior to despatch.

Pick Notes From Rush Orders

0 - Print pick notes during next pick note run.

1 - Print pick note, but in batch processing.

2 - Print pick note interactively.

This applies when sales order type = 7 (rush or emergency order).

Labels From Packing

0 - No. Do not print Packing labels in confirmed packing routines.

1 - Yes. Print Packing labels in confirmed packing routines.

Print Despatch Notes

0 - No. Do not print a clean despatch note to be used as the customer's despatch document.

1 - Yes. Print a clean despatch note to be used as the customer's despatch document.

Invoices In Currency

0 - Print invoices in the base currency.

1 - Print invoices in the customer's currency.

Grace Period

0 - No. Do not allow a grace period when performing customer credit checks.

1 - Yes. Additional days grace to be added to normal payment terms before performing credit checking routines. The actual number of days is set on the Style Inventory Descriptions file using type GRAC.

Order Entry By Division

This allows you to restrict the style division by order with individual suppliers. A default can be established at company level with the facility to override for specific customers to allow their operational processes to be matched.

0 - Enables mixed divisions.

1 - No mixed divisions are allowed.

2 - Displays a mixed divisions warning.

Order Entry Trader Windows

0 - No. Do not display the additional Trader windows during order entry.

1 - Yes. Two additional windows are included with the colour/size matrix window during order entry.

Window 1 - Indicates the past five orders and prices for that style and customer.

Window 2 - Shows price applied over the customer's discount matrix.

Allow Over Despatch

Enter 1 to allow an operator to enter a value greater than the quantity to pick in confirmation of despatch.

Discount From Estimates

0 - The discount set up against the mail order estimate is not used at order entry.

1 - The discount used at order entry will be the discount set up against the mail order estimate.

Allow Orders In Currency

0 - Sales orders are only allowed in base currency.

1 - Sales orders can be entered in the chosen currency. This will be converted to base currency to be held on the file.

Consolidate Despatch Notes

0 - You cannot enter multiple sequence numbers against a single picking note.

1 - Multiple sequence numbers can be entered against one picking note in order to consolidate the despatch.

Forecasting In Use

0 - Indicates that Forecasting is not in use.

1 - This indicates this Application is interfaced with Forecasting at style/colour/size level.

2 - This indicates this application is interfaced with Forecasting at style level.

Press **Enter** to confirm your data entry and complete the Company Maintenance process.

Enterprise Group Maintenance

6/STCO

You use this function to define the companies to be used within an Enterprise Group. The companies must be defined before any customer or supplier updates are performed for Enterprise definitions.

Once set up it provides a single source of information for validation and cross reference purposes.

Enterprise Group Maintenance Screen 1

This screen is displayed when you select the Enterprise Group Maintenance option.

It is used to select a company to be used within the enterprise. The company must exist within either Sales Order Processing or Purchase Management.

The Descriptions file is used to define valid parameter values for use within the application. For more information see Style Descriptions File Maintenance.

Customer Maintenance

2/STOEM

Use this procedure to maintain your customer database. This is to ensure that invoices, statements, and acknowledgements, as well as the goods, are sent to the correct address.

Equally, it is necessary to ensure that the correct analysis codes are applied to sales and orders so that accurate analysis can be performed.

It is therefore necessary to identify:

- Where statements are sent, and from where payments will be received.
- The delivery points.
- Where invoices should be sent.
- Trading terms and analysis codes.

The account code used as a unique identifier of a customer is eight characters long with a suffix of three characters. Statement and invoice accounts always have a suffix of 000. You cannot have both a statement and an invoice account. A statement account may have a number of delivery points. These are defined by a suffix other than 000, with a common first eight characters. Normally the invoice would be sent to the delivery point or to the statement address; however, they can be sent to another address if required.

The statement account is set up in the Accounts Receivable application because much of the data is concerned with credit worthiness and payment terms. Sales data can be set up for each delivery point to control Sales Analysis coding, pricing and the rules governing trading with that part of the customer's organisation.

To set up the statement account refer to the Accounts Receivable product information.

Customer Maintenance Screen 1

 This screen is displayed when you select the Customer Maintenance option.

You use this screen to select the customer and the customer information to be maintained.

```

Fields:

Customer

Enter a customer.

Sequence No

For specific statement, invoice or delivery accounts, both the eight character Account Code and the three character suffix must be entered.

Detail Required

Enter one of the following to specify what to maintain.

1 - Invoice Address. To maintain the invoice address. You do not need to enter a sequence number.

2 - Delivery Address. To maintain the delivery address. You must enter a sequence number.

3 - Sales Details. To maintain the customer sales details. You must enter a sequence number.

5 - Trade Details. To maintain the customer World Trade details, if you are using the World Trade application. You must enter a sequence number.

 When you press **Enter** the requested screen is displayed.

Invoice Name And Address Maintenance Screen (Option 1)

To display this screen, on the Customer Maintenance Selection Screen, enter the customer. Then enter 1 in the detail required field and press **Enter**.

Tip: You only need to define an invoice address if it is neither the statement nor the delivery address. The customer code must be different to the statement code.

Use this screen to enter and maintain the details for the invoice address.

Fields:

Customer

This is a display field only. The code being processed is shown along with the caption Addition or Amendment as appropriate.

Name

Up to 35 alphanumeric characters for the name of the customer account.

Statement Address 1-5

Enter up to five lines of statement address.

Post Code

Enter up to five characters for each half of the post code.

Contact

Enter up to 35 characters for the contact name at the customer address.

Phone No

Enter up to 20 characters for the customer's telephone number.

Fax No

Enter up to 20 characters for the customer's Fax number.

Currency Customer Flag

You can enter the following options:

0 - Only Accounts Receivable base currency is allowed.

1 - This is a multi-currency customer.

Currency Code

If the account is to be processed in a currency other than your base currency, enter the currency code associated with the customer's currency. This field will default to base currency but can be changed.

Note: The currency fields will only be displayed if Accounts Receivable is operating as a multi-currency application.

Group 1-4

Enter up to four analysis codes. They must be defined to parameter type CGP1.

Remarks

Used for memo purposes.

Salesman

The salesman responsible for the customer.

Region

The customer's sales region.

Invoice Consolidation

This function is used to identify how invoices will be processed for the customer. The code indicates whether each despatch will generate an invoice. Alternatively the customer can be sent one document containing all invoice details for a particular day, week or month.

This field defaults from the company profile but can be changed here for individual customers.

0 - Despatch Note. To produce an invoice for each despatch note.

1 - Daily. By Date. To produce one invoice for all despatches on one day.

2 - Weekly. By week number. To produce one invoice for all despatches during one week.

3 - Monthly. By period number. To produce one invoice for all despatches during one month.

Note: Invoices for any delivery points for this address are consolidated together.

Activity

Enter S to suspend the customer temporarily, and D to delete.

This field is only displayed if the customer invoice detail is being amended.

Press **Enter**. If you are using World Trade the Customer Trade Details Window displays, otherwise the Customer Maintenance Selection Screen is re-displayed.

Delivery Name And Address Maintenance Screen (Option 2)

To display this screen, on the Customer Maintenance Selection Screen, enter the customer and sequence number. Then enter 2 in the Detail Required field and press **Enter**.

Use this screen to enter the delivery point details for the customer. For each delivery point you can set up trading and commercial conditions, including pricing, discounts, normal supplying depot, salesman and regions.

Fields:

Name

Enter up to 35 alphanumeric characters for the customer's delivery name.

Address 1-5

Enter up to five lines of delivery address

Postcode

Enter five characters for each half of the post code.

Contact

Enter up to thirty-five characters for the name(s) of the contact(s) at the customer.

Phone Number

Enter up to 20 characters for the customer telephone number.

Fax Number

Enter up to 20 characters for this customers fax number.

Currency Customer Flag

You can enter the following options:

0 - Only the Accounts Receivable base currency is allowed.

1 - This is a multi-currency customer.

Currency Code

If the account is to be processed in a currency other than your base currency, enter the currency code associated with the customer's currency. This field will default to base currency but can be changed.

VAT Code

This only needs to be entered if it is different from the set-up in Accounts Receivable. The default value for orders will be taken from the delivery address.

VAT Ind

The VAT indicator used to indicate whether or not the VAT Code should be applied to the customer or the item. You can enter the following options:

1 - If the customer is exempt from VAT. The VAT code should have a rate value of zero.

2 - If the VAT code assigned to the customer account will be used.

3 - If the VAT code assigned to the items will be used instead of the customer's code.

Extra Rate VAT

This field is only displayed if you select **F10=Additional Details**.

0 - No. No extra charges are applicable for the VAT Code defined.

1 - Yes. Extra charges are applicable for the VAT Code defined.

St. Addr

Statement Address. The statement address associated with the delivery address is identified.

In. Addr

Invoice Address. The default code will be the account code for which a delivery address is currently being maintained. If the invoice for this customer is to be sent to another address, enter the appropriate invoice account code.

Tip: You do not need to complete the remaining fields for delivery only addresses.

Functions:

F10

Additional Details. Use this function to display the additional field, Extra Rate VAT. Enter 1 if you do charge extra using the VAT Code defined.

Note: If you change any search entry fields, a screen automatically displays so you can maintain the information used to create the

search criteria for this customer.

Press **Enter** to save the changes. The Customer Maintenance Selection Screen is redisplayed.

Customer Sales Information Screen (Option 3)

To display this screen, on the Customer Maintenance Selection Screen, enter the customer and sequence number. Then enter 3 in the Detail Required field and press **Enter**.

Note: The Customer Sales Information is displayed automatically when you set up new delivery address details.

Use this screen to maintain the customer data used to control the processing of sales orders, and for Sales Analysis.

Fields:

Price List Code

The price list which will normally apply to this customer. This field is mandatory.

Discount List Code

The discount list which will normally apply to this customer.

Cash Discount Code

The cash discount code as defined on the Style Inventory Descriptions file against major type CDSC. The rate of discount is defined as a percentage or value which is to apply to the order generated for this customer.

Allocation Priority

The usual priority of orders for this customer; used for the batch allocation of stock to orders.

Currency Rate Code

The default rate code to be used to convert prime currency orders into base currency. This field appears for a multi-currency company and only when the customer has the Currency Customer flag set to 1. In this case this field is mandatory.

Back Orders

- 0 - The customer will not accept back orders.
- 1 - The customer will accept back orders, for example, in the event of a stock shortage.
- 2 - The customer will not accept back orders. The whole order is cancelled.
- 3 - The customer will not accept back orders. The order is suspended.

Part Delivery

- 0 - Will not accept part delivery.
- 1 - The customer will accept delivery of the order lines that can be supplied even though the full order cannot be met due to stock shortages.

Manual Pick List

- 0 - No. Do not print manual pick lists.
- 1 - Yes. Print the order allocations and their associated stockroom prior to producing the picking notes. The list is a manual picking list which can be used to adjust despatch quantities before the orders are sent out.

Carriage Charged

- 0 - No. You do not charge this customer for carriage.
- 1 - Yes. This customer is to have a carriage charge attached to their orders.

Small Order Charge

- 0 - No. A small order charge is not applied to this customer.
- 1 - Yes. A small order charge is added to orders under a specific value.

Acknowledgement

- 0 - No. No order acknowledgement required.
- 1 - Yes. An acknowledgement is printed for each of this customer's orders.

Order Reference

- 0 - No. Entry of an order reference is optional.
- 1 - Yes. Entry of an order reference during order entry is mandatory.

C-of-C To Be Used

- 0 - No. Do not produce Certificates of Conformity for this customer.
- 1 - Yes. This customer requires Certificates of Conformity.

Special Customer

- 0 - No. This customer is not a special customer.

1 - Yes. This customer is defined as a special customer for the Sales Analysis application.

Distribution Centre

This is the customer delivery point which is flagged as being a distribution centre for the overall customer.

0 - No. This customer does not use a distribution centre.

1 - Yes. This customer does uses a distribution centre.

Division

The customer division chosen from those defined on the Style Inventory Descriptions file against major type DN.

Sub-Division

The customer sub-division chosen from those defined on the Style Inventory Descriptions file against major type SV.

Region

The customer sales region code chosen from those defined on the Style Inventory Descriptions file against major type SN.

State

The customer state code chosen from those defined on the Style Inventory Descriptions file against major type ST. Mandatory.

Territory

The customer territory code chosen from those defined on the Style Inventory Descriptions file against major type TR. Mandatory.

Salesman

The customer salesman code chosen from those defined on the Style Inventory Descriptions file against major type TN. Mandatory.

Customer Class

The customer class code chosen from those defined on the Style Inventory Descriptions file against major type CCCC. Mandatory.

Corporation

If the customer is part of a larger organisation, this may be used to define the corporation for analysis purposes.

Default Price List

0 - No. The default price list is not used for this customer.

1 - Yes. The default price list is used for this customer.

Invoice Consolidation

This function is used to identify how invoices will be processed for the customer. The code indicates whether each despatch will generate an invoice. Alternatively the customer can be sent one document containing all invoice details for a particular day, week or month.

This field defaults from the Company Profile but can be changed here for individual customers.

0 - Despatch Note. To produce an invoice for each despatch note.

1 - Daily. By Date. To produce one invoice for all despatches on one day.

2 - Weekly. By week number. To produce one invoice for all despatches during one week.

3 - Monthly. By period number. To produce one invoice for all despatches during one month.

Consolidation By Customer PO

Consolidation by customer purchase order. Select one of the following:

0 - No. Invoice Consolidation is not done to Purchase Order level.

1 - Yes. Invoices will be broken down or consolidated to the level of customer purchase order numbers. This is in addition to invoices produced by despatch - daily, weekly or monthly, depending upon the setting of the Invoice Consolidation flag.

2 - CDC (Customer Distribution Centre). The system will produce a separate invoice for each CDC that was shipped to within a customer's purchase order number. This in turn enables the Accounts Receivable department to access information on a CDC by CDC basis.

Initial Order Pick Percentage

Enter the percentage value you require for your orders. This facility enables you to enter a fill percentage which applies to the order in total, and delays stock delivery until a minimum percentage value can be shipped. The system allocates stock up to that value and then produces pick tickets for the remainder of the order.

Backorder Pick Percentage

To set up a backorder pick percentage, enter the minimum percentage value you require. Where initial order requirements have been fulfilled, and a quantity remains outstanding, back order pick percentages operate. Back order pick percentages suspend pick ticket action until the back order percentage threshold for an order is met. A Description file entry can be used to allow the final shipment to ignore the back order pick percentage and send all that is remaining on the order.

Note: If back order pick percentages are not set up, any quantities outstanding upon reaching the initial pick list percentage will be cancelled.

On pressing **Enter** the information entered is validated and written back to the database.

Functions:

F11

Delete the additional data record. The customer sales information will be deleted.

F13

Open Style Sales Details window.

F15

Mark For Details. This displays the Mark For Details window.

F21

External Text. Additional external customer text to be printed on documentation, for example, on invoices.

Style Sales Details Window (F13)

 This window is displayed if you select **F13=Style Details** on the Customer Sales Details Screen.

Use this window to maintain customer data used to control sales order processing.

Fields:

Uses Xref Products

These codes are maintained through Customer Product XREF Maintenance and they print on any external documents generated.

- 0 - No. Customer product codes are not used in order placement.
- 1 - Yes. Orders may be placed using a Customer's own product codes.

Mail Order Customer

- 0 - No. Mail order estimates are not maintained for this customer.
- 1 - Yes. Mail order estimates are maintained for this customer.

Cancellation Notes

- 0 - No. This customer does not receive cancellation notes.
- 1 - Yes. This customer receives cancellation notes.

Proforma Invoices

- 0 - No. This customer does not receive pro forma invoices.
- 1 - Yes. This customer receives pro forma invoices.

Special Tasking Code

Default tasking narrative that will print on picking documents only. The code can be overridden at order entry. This set up on the Style Inventory Descriptions file against type SPTS.

Size System ID

The size system the customer will normally order by; for example, UK, American, EU, European. This is used to display size description appropriate to a customer. This set up on the Style Inventory Descriptions file against type SIZS.

Credit Check Type

If extended credit checking is in use, set on the Company Profile Maintenance - Operational Defaults Screen 2, this field is used to indicate how credit checks will be carried out for this customer.

- 0 - Do not credit check.
- 1 - Credit check against credit limit.
- 2 - Credit check against credit limit and check for debt outside the payment terms.
- 3 - Check for debt outside of payment terms.

Note: When extended credit checking is not in use all customers are credit checked as though they are type 1.

Cancel Date Required

- 0 - No. Cancellation date is not required.
- 1 - Yes. Create an active cancellation date.

Customer Store Number

Enter the customer store number.

Department Number

Enter the department number.

Order Entry By Division

Changes are only allowed for customer delivery sequence 000. This enables the restriction of style division by order with individual suppliers. A default can be established at company level, with the facility of being overridden for specific customers to allow their operational processes to be matched.

- 0 - Enables mixed divisions.
- 1 - No mixed divisions.
- 2 - Displays a mixed divisions warning.

Press **Enter** to update the details and return to the Customer Sales Information Screen.

Mark For Details Window (F15)

-  The screen is displayed when you select a Division on the Customer Division Maintenance screen and press **Enter**.
-  This screen is displayed when you select **F15=Mark For Details** on the Customer Sales Information Screen.

This screen displays the Mark For Details for the delivery point.

Fields:

Consolidator

This is usually an external shipping company.

This is validated against the AR Customer File and must be a different customer from the one being maintained.

Customer DC

The customer is the same as the customer being maintained, only the delivery sequence can be entered for a distribution centre.

Consolidator Docking Bay

The docking bay where goods are consolidated for this customer. This field is for memo purposes only.

Carton Constraint

Record any constraints on carton contents for this customer. This field is for memo purposes only.

Customer DC Docking Bay

The docking bay for this customer's Distribution Centre. This field is for memo purposes only.

Weight Constraint

Record any weight constraints for cartons for this customer. This field is for memo purposes only.

Primary Ship Via

The primary shipping method used for this customer. This is validated against Inventory Description type SVIA. This field is for memo purposes only.

Volume Constraint

Record any volume constraints on shipments to this customer. This field is for memo purposes only.

Secondary Ship Via

The secondary shipping method used for this customer. This is validated against Inventory Description type SVIA. This field is for memo purposes only.

Shipping Zone

The shipping zone this customer falls into. This field is for memo purposes only.

Collect?

0 - No. This customer does not collect goods.

1 - Yes. This customer does collect goods.

Authorisation Before Ship

0 - You do not require authorisation from this customer before shipping goods.

1 - Yes. Authorisation is required from this customer before goods can be shipped.

Consignee Billing

0 - No. You do not bill the consignee for goods shipped to this customer.

1 - Yes. The consignee is billed for goods shipped to this customer.

Pre Paid

0 - No. Deliveries to this customer are not pre-paid.

1 - Yes. Deliveries to this customer are pre-paid.

Shipping Information

Enter any additional text required for information on this customer's shipping details.

Enter the details required then press **F8=Update** to update and validate the file.

Customer Maintenance Customer Division Screen

This screen is displayed when you press **Enter** on the Customer Sales Information Screen.

Note: This screen is only displayed if you set the Customer Division Checking field to 1, on the Company Profile Maintenance Operational Defaults Screen.

Use this screen to maintain data that confirms which salesman can sell which product group, to a customer.

The customer number and name are displayed for verification purposes.

All the valid divisions set up on the Inventory Description file type DIVN - Inventory product division.

Fields:

*Note: The data you enter here must be set up in
the World Trade SPEX Master files.*

Exporter

Enter the default exporter for this customer.

Export Cargo Shipping Instructions

Enter the default Export Cargo Shipping Instructions for this customer.

Bank

Enter the default bank for this customer.

Bill Of Exchange Information

Enter the default bill of exchange information for this customer.

Other

Enter another address for this customer, if required.

Notify Party 1

Enter the first party to notify when payment is made by letter of credit.

Forwarder

Enter the default forwarder for this customer.

Notify Party 2

Enter the second party to notify when payment is made by letter of credit.

Declarant

Enter the default declarant for this customer.

Invoice Text 1

Enter the first piece of default invoice text for this customer.

Principal

Enter the default principal for this customer.

Invoice Text 2

Enter the second piece of default invoice text for this customer.

Carrier

Enter the default carrier for this customer.

Transit Point

Enter the default transit point for this customer.

Signatory

Enter the default signatory for this customer.

Terms Of Payment

Enter the default terms of payment for this customer.

Autorun

If your version of SPEX supports documentation prior to despatch, for example, SPEX V3.00, you can assign autorun codes at customer level. The autorun code assigned to the customer is carried onto each shipment when you create it.

Country Of Despatch

Enter the default country of despatch for this customer. These details are maintained within World Trade itself.

Note: This value is not used when determining From and To countries for EC reporting, or determining whether or not to create a shipment.

Press **Enter** to save changes to the screen and return to the previous screen.

Tip: This displays the Depot Profile Maintenance - Stock Week Matrix Screen. See Style Inventory Management for a description of this screen.

Depot Profile Maintenance Screen 4

This screen allows all items from an existing warehouse to be copied to the warehouse being maintained.

*Note: This screen is only displayed if
Warehousing is installed.*

Fields:

Copy All Products From Depot

Enter the depot to be used as a base for generating a set of stockroom balance details.

Price And Discount Profiles

5/STOEM

All price and discount lists in the Sales Order Processing application have control data defined on a list profile. This identifies the name of the list and the owner or the user who has authority to maintain it. This authority is defined by the User Profile name.

Discount/Price Profile Maintenance Screen 1

This screen is displayed when you Select Price/Discount Profiles from within Sales Order Processing Maintenance.

Use this screen to select the price or discount list to be maintained.

```
0E075          ST - JBA System Test Company  USER GBJBARW2  31/10/95

Authority.....	_____		
Currency.....	___		
Text.....	_____		
F3=Exit F12=Previous			
MA	a	08/017	

Fields:

Authority

The user profile of the individual who will be maintaining the list.

Currency

The currency code of the currency in which the list values are expressed.

Note: Currency details will only be displayed if the multi-currency flag is set to 1 (Yes) on the Accounts Receivable Company Profile.

Text

The name or title of the list.

Default Price List

0 - No. This is not a default price list.

1 - Yes. This is a default price list.

As the customer's price list is usually only a selection of all available items, the default list acts as a standby list. If the item on order does not exist on the customer's price list, the default list is used to price the item, provided the Default Price List Flag on the Customer Maintenance-Customer Sales Information screen has been set to 1. If you wish to change the default price list, you must set this field to 0 on the old list, before setting this new default list to 1.

Note: This field is only displayed when you are maintaining a price list profile.

On pressing **Enter** the data is validated and written back to the database.

Price Lists

6/STOEM

Use this option to maintain price lists for use in Sales Order Processing.

Note: A price list can only be maintained by the authorised owner of the list.

Price List Maintenance Screen 1

This screen is displayed when you select Price Lists from within Sales Order Processing Maintenance.

Use this screen to select the price list, effectivity date and item for which price details are to be maintained.

Enter the reference number corresponding to the item you wish to maintain.

After selecting the line, the list price, UoM and factor can be amended.

 When you press **Enter** the data is written back to the displayed list. Press **F12=Previous** to return to the initial selection screen.

Discount Lists

7/STOEM

This procedure enables the maintenance of discount lists to be used by order entry. A discount list is identified by a three character code and can be associated with a customer. Discounts can be set for an item, an item group or an order.

Note: A discount list can only be maintained by the authorised owner of the list.

Discount List Maintenance Screen 1

 This screen is displayed when you select the Discount Lists option from within Sales Order Processing Maintenance.

Use this screen to select a discount list for maintenance. One list can have item discounts, item group discounts and whole order discounts. However, the discounts must be individually defined; that is, you cannot define group discounts and order discounts on the same screen. A discount list may only be maintained by its current owner, as defined by the authority on the Discount profile.

You can only enter data into one of the following fields:

- Product Discount Group.
- Style.
- Order Discount.

What you enter here will affect which fields are displayed on the next screen.

0E085	ST - JBA System Test Company	USER GBJBARW2	31/10/95 13:27:43

F3=Exit F4=Prompt			
05-26 <u>SF</u> MW KS IM II KENB20A PET178S2			

Fields:

Discount List Code

The discount list to be maintained.

Product Disc Group

The item discount group as held on the Item Master file. This defines a group of items subject to the same discount.

Style

Enter the unique code of the item for which you wish to maintain discounts.

Customer

This is the customer to whom the discount is to apply. If left blank the discount will apply to all customers.

Order Discount

0 - No. Do not maintain order discounts.

1 - Yes. Maintain whole order discounts.

Effective Date

The first date from which the discount should be applied. If left blank the current date will be assumed.

Press **Enter** to display Discount List
Maintenance Screen 2.

Discount List Maintenance Screen 2

 This screen is displayed when you enter data on the initial screen and press **Enter**.

Use this screen to maintain discounts for a selected item, item discount group, or whole order discount within a discount list. The specification of the list is displayed, that is, the user ID of the person authorised to maintain it, effective date, currency, item discount group, item, and order discount indicator.

Currency code.....	GBP		
F3=Exit F12=Previous			
11-26	SF	MW	KS IM II KENB20A PET178S2

Fields:

UoM Code

The quantity limits are expressed in the units identified here. If this is left blank, the unit of measure identified in the order is used.

UoM Factor

If the UoM is different from the units of measure identified in the order, the UoM factor is used to convert the ordered UoM to that of the discount UoM. Once the conversion is performed the discount is deduced by the system.

 *Note: The UoM code and UoM factor do not appear if you enter 1 in the Order Discount field.*

Percent/Value

- 1 - Discounts entered here are expressed in percentages.
- 2 - Discounts entered here are expressed as values.

Based On

- 1 - The qualifying limits for this discount list are quantities.
- 2 - The qualifying limits for this discount list are values.

Note: The whole order discounts are always expressed in percentages and are based upon order values.

There then follows a series of qualifying limits and rates to define a scale of discounts. The types of entry in the qualifying limits and rates are governed by the based on and percent/value flags.

Qual Limits

The quantity or value up to which the related discount will be earned. The last limit must be 99999999999999.99.

Rates

The discount in percentage or value earned by the corresponding qualifying limit.

Press **Enter** to update the database and return to the initial screen.

New Price List

1... **2...** 8/STOEM

You use this option to:

- Update an existing price list. You can adjust all of the prices in a list by a defined percentage. A positive value will increase all prices in the list. A negative value will decrease the prices.
- Create a new price list. This can be generated as a direct copy of a existing price list or a defined variation of an existing list.

A batch job is submitted to create the price lists.

Create New Price List Screen

This screen is displayed when you select the Create New Price List option from within Sales Order Processing Maintenance.

If a new price list has been created on a previous occasion, the details will appear in the initial screen. To create a new list, override the existing information.

0E155	ST - Style Distribution Company	USER STYLEEDU	4/09/97 14:05:50
Create New Price List			
Price list details:			
New list.....	_____	Old list.....?	_____
Effectivity date.....	_____	Effectivity date.....	_____

Currency rate.....	.00000	_ ('1'=Multiply,'2'=Divide)	
F3=Exit F4=Prompt			
15-41 SA MW KS CL IM DM II KENB20A KB PET310S1			

Fields:

New List

To create a new list, enter the name of the new list. To update an existing list, enter the name of the existing list.

Effectivity Date

Enter the date that the prices on the price list are to be effective from.

Old List

Enter the code of the price list to be updated or used as a base for the new one.

Effectivity Date

Enter the effectivity date of the Old list.

New Authority

If creating a new list, enter the user profile of the person who is to have authority for the list.

If updating an existing list the system assumes the authority for the list is the same as before.

Tip: If you want to create a based-on price list, and want this new price list to be effective from today, enter *yesterday's* date in the first

Effectivity Date field, and *today's* date in the second Effectivity Date field.

Factor (%)

Enter the percentage by which the prices on the old list are to be decreased or increased.

For a percentage decrease, enter - (minus) after the percentage.

Number Of Decimals

The prices calculated for the new list may not be a whole number of pounds. This field allows you to decide how many decimal places should appear in the new prices.

Examples:

Current price - 27.37

Factor - 8%

Calculated price - 29.55960

Number of decimals - 1 (would give a price of 29.6)

Number of decimals - 2 (would give a price of 29.56)

Update Prices

0 - No. To produce an audit report to show the effect a price update would have.

1 - Yes. To implement the price list update.

Currency

The currency code of the new price list.

Currency Rate Code

The currency rate code is used to define the exchange rates.

Currency Rate

The currency rate converts old prices to the new prices. The conversion operation is determined by the Multiply/Divide field. Either a currency rate or a current rate code must be entered.

1 - Multiply. This option will multiply the transaction value by the currency rate.

2 - Divide. This option will divide the transaction value by the currency rate.

Press **Enter** to validate the data.

Press **Enter** a second time to go to the Create New Price List Details Screen.

Create New Price List Details Screen

This screen is displayed when you enter data into the Create New Price List Screen and press **Enter**.

You use this screen to enter details of the items you want to include on the new price list.

Fields:

Stop/Sell Flag

Enter 1 against a colour/size/fit element, to set the Stop/Sell flag for that variant.

Press **Enter** to confirm the choice.

Note: Using an order type that causes on-line interactive allocation, will override the flag setting for that order only, for example order type 7 - Rush.

Press **Enter** to update the database and return to the initial screen

Functions:

F19

Displays the area to the left of the window.

F20

Displays the area to the right of the window.

Key Size Flag Maintenance

11/STOEM

Certain colour, size and fit combinations will sell more than others by a wide margin. As this will deplete the popular items stock, shortages are more likely. Company policy may dictate that less popular colours and sizes should be shipped only if the more popular items are also despatched at the same time. These popular items can be marked as Key sizes.

This policy is accomplished by indicating the popular colours, sizes and fits for a style. Batch allocation will then allocate less popular items only if the more popular items can be allocated as well.

Fields:

Style

Enter a Style.

Press **Enter** to display the Style matrix window.

Key Size Style Matrix Screen

This screen is displayed when you enter a Style on the selection screen and press **Enter**.

Use this screen to indicate the most popular colour/size items of your range.

Fields:

Key Size Flag

Enter 1 in a field of the matrix to indicate that item variant as a Key size. Press Enter to confirm the setting.

Press **Enter** to confirm the choice and return to the initial screen.

Mail Order Estimate Maintenance

You use mail order estimate maintenance screens enable you to either set up new mail order estimates using the or update existing mail order estimates.

There are two options available:

Mail Order Estimates - Original

1...
2...

12/STOEM

To set up new estimates.

Mail Order Estimates - Latest

1...
2...

13/STOEM

To update existing estimates.

On the initial screen you enter a control quantity for the style.

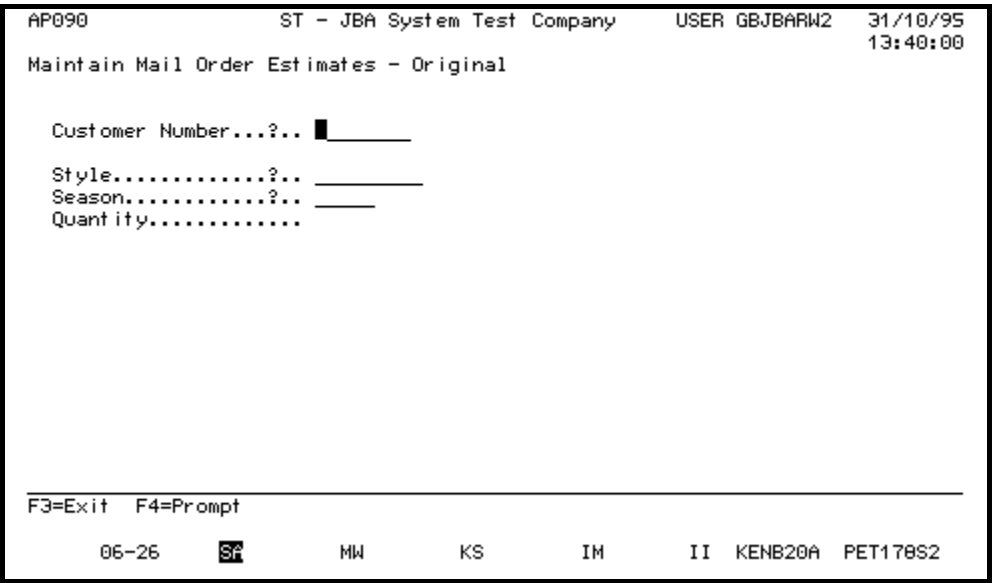

On the second screen you enter individual quantities for each variant of the style. These individual quantities must add up to the control quantity. If, for example, the control quantity were 1000, you would create an estimate of the usage per 1000 of each variant.

Mail Order Estimates - Original

 Select the Mail Order Estimates - Original option.

If the Mail Order Customer Flag on the Customer Maintenance Style Sales Details window is set to 1, an estimate can be maintained for the customer on a season/style level. Order entry will record actual bookings against the estimate.

Use this screen to select a customer, style and season and if creating a new estimate, a quantity.

Fields:

Customer Number

Enter a customer who is flagged as a mail order customer.

Style

Enter the style that is being estimated.

Season

Enter the season for which the estimates are being made. Valid seasons are contained in the SESN description type in the Style Inventory Descriptions file.

Quantity

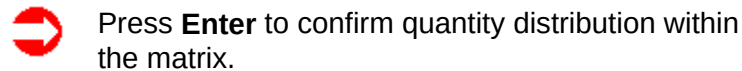

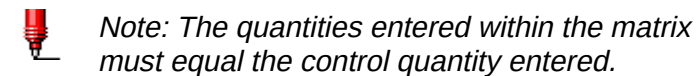

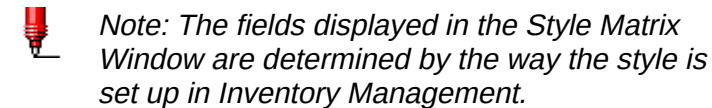

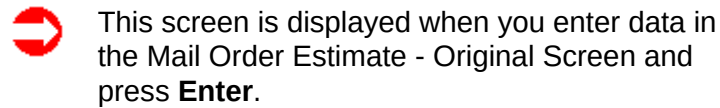

If creating a new estimate then enter a quantity. If amending an existing estimate then the quantity will be displayed, which you can override if necessary.

Note: If the Discount from Estimates Flag on the Company Profile Maintenance - Operational Defaults Screen is set to 1, mail order estimates quantities are used in the discount calculation to find the appropriate discount percentage rather than the order quantity.

Press **Enter** to display the Style Matrix Window.

Maintain Mail Order Estimates - Latest

Select the Maintain Mail Order Estimates - Latest option.

You use this function to update an existing mail order estimate without losing the original data.

The system performs a check that verifies an original estimate already exists.

Fields:

Specification (1 to 3)

These user defined details default through from Style Inventory Management Company Profile.

Effectivity Start

This is the date that the Kit Item is entered onto the system for the first time.

Purchase Pack

Enter up to six alphanumeric characters to define the purchase pack of this Kit Item.

Item Type

This is the Item Type chosen from those defined on the Style Inventory Descriptions file against Major Type PTYP. Maximum field length is one character.

Item Class

This is the Item Class chosen from those defined on the Style Inventory Descriptions file against Major Type PCLS. Maximum field length is two characters.

Item Group Major

This is the Item Group chosen from those defined on the Style Inventory Descriptions file against Major Type PGMJ. Maximum field length is three characters.

Item Group Minor

This is the Item Group chosen from those defined on the Style Inventory Descriptions file against Major Type PGMN. Maximum field length is three characters.

Division

Enter a division from those defined on the Style Inventory Descriptions file against Major Type DIVN. Maximum field length is two characters.

Sub-Division

Enter a sub-division chosen from those defined on the Style Inventory Descriptions file against Major Type SDIV. Maximum field length is two characters.

The above codes are used to define which division of the company has responsibility for this particular product.

Purchase Unit

Enter a unit chosen from those defined on the Style Inventory Descriptions file against Major Type UNIT. Maximum field length is two characters.

Stock Unit

Enter a unit chosen from those defined on the Style Inventory Descriptions file against Major Type UNIT. Maximum field length is two characters.

Issue Unit

Enter a unit chosen from those defined on the descriptions file against Major Type UNIT. Maximum field length is two characters.

The above units are the three valid units of measure to be used in association with this product.

VAT Code

Enter a VAT code chosen from those defined on the Style Inventory Descriptions file against Major Type VAT.

Discount Group

This is a three character field.

This can be specified against a Discount List for the group. This is defined to Descriptions with Major Type PGR. Maximum field length is three characters.

Inventory Source

Enter an Inventory Source code chosen from those defined on the Style Inventory Descriptions file against Major Type INSC. This field is not currently used within this application. Maximum field length is one character.

Sales Analysis Flag

Enter 1 to allow the Kit Item information to be used within Sales Analysis.

Flag Item For Deletion

0 - No. Do not delete the item in the next Item Deletion run.

1 - Delete. Flag the item for deletion in the next Item Deletion run.

Note: The item is deleted after first checking that there are no outstanding transactions and that

the end date entered in the End Date below has been reached.

Stock To Purchase Conversion Factor

Enter nine numeric characters with five decimals to specify the relationship between the stock and purchase units. If stock and purchase units are the same, this should be 1. If, for example, stock units are Each and purchase units are Tens then this conversion factor should be 10. The default is 1.

Issue To Stock Conversion Factor

Enter nine numeric characters with five decimals to specify the relationship between the issue and stock units. If issue and stock units are the same, the conversion factor should be 1. If, for example, the issue unit is Each and the stock unit is Tens then the conversion factor should be 10. Default is 1.

Weight Per Selling Unit

Enter eleven numeric characters, four decimals to specify the weight of a single selling unit.

Tip: When you press **Enter** all data that has been entered is validated and the screen is redisplayed, showing code descriptions for confirmation.

Press **Enter** a second time display the second screen.

F8=Update F9=Add style F12=Previous

MA a 13/019
```

Fields:

Quantity

The number of fields displayed in the style matrix depend on how the style has been set up in Inventory Management. In this example the style matrix contains colour and size.

If you chose option 1, you can enter quantities against the item variants you want to include in the Kit.

Press **Enter** to save any changes and return to the Kit Details Maintenance Screen.

Available To Promise/Ship Date Maintenance

18/STOEM

You use this option to define an available-to-promise and ship date for individual styles.

Available To Promise/Ship Date Maintenance Selection Screen

 This screen is displayed when you select the Available to Promise/Ship Date option.

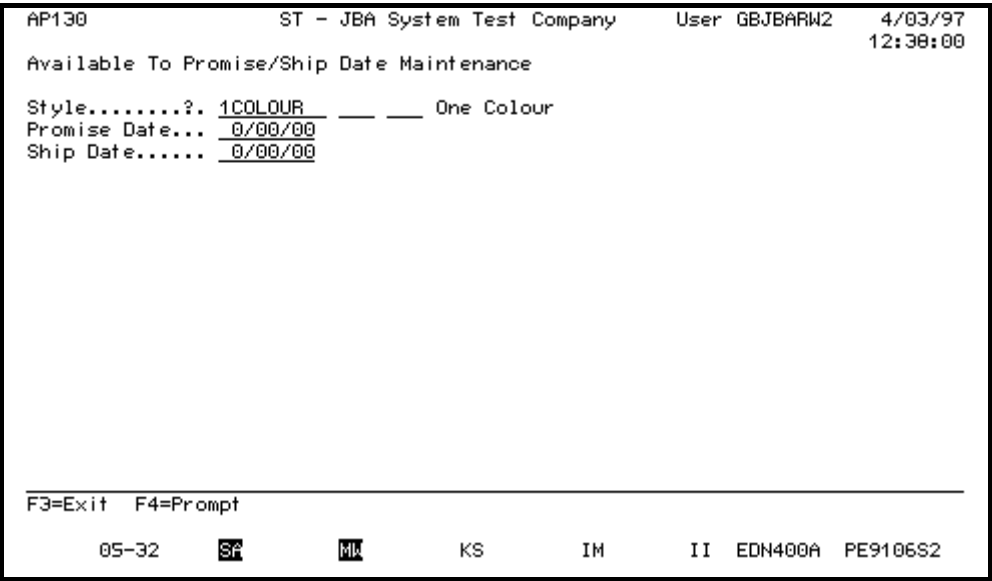

You use this screen to enter the details of the style for which you wish to create Available To Promise/Ship Date details.

 Tip: What you enter in the three Style fields determines what is displayed on the next screen.

If you enter just a style, the next screen displays a line for each colour, size and fit within the style, so that you can set up promise and ship dates for all variants of that style.

If you enter a style and a colour, the next screen displays a line for each size and fit for the style/colour combination you entered.

If you enter a style, colour and size, the next screen displays a line for each fit for the style/colour/size combination you entered.

```

Fields:

Style

Select Style to maintain all item records for each style.

Promise Date

You can use this to set Available To Promise Dates against each item, so that at order entry time they can only be ordered if the customer order date is later than the promise date.

 Note: All of the Promise date and Ship Date fields on the next screen will be set to the dates

entered on this screen.

Ship Date

This enables you to set ship dates against each item so that the picking process will only select those with a ship date later than the picking date.

Press **Enter** to confirm your data input and display the Promise/Ship Date Maintenance Screen.

Available To Promise/Ship Date Maintenance Screen

This is displayed when you press **Enter** on the selection screen.

Use this screen to set up promise and ship dates for each individual item variant selected in the previous screen.

Fields:

Promise Date

This enables you to set available-to-promise dates against each item, so that at order entry time they can only be ordered if the customer order date is later than the promise date.

Ship Date

This enables you to set ship dates against each item, so that the picking process will only select those with a ship date later than the picking date.

Press **F8=Update** to update the details and return to the selection screen.

Mark For Mass Maintenance

19/STOEM

This function provides a quick method of attaching Customer DCs and Consolidators to delivery addresses.

You can use it:

- At set-up time to create the main bulk of the data, which can then be fine tuned using Customer Maintenance.
- To maintain customer records if some fundamental changes with a customer's Consolidators and Customer DCs have taken place.

Mark For Details Mass Maintenance Selection Screen

This screen is displayed when you take the Mark For Details Mass Maintenance option.

Use this screen to enter the customer and specify if you want to maintain delivery addresses and divisions.

These fields will be used as the defaults for the customer.

The customer is validated against the Customer file defined to Sales Order Processing.
