## Chapter 2

### Processing

# Recording Sales Orders

The Style Sales Order Processing application provides two ways of recording sales orders. These are:

## **Transcriptional**

On-line allocation is not allowed.

## **Conversational**

A dialogue with the customer to agree how best requirements can be met.

During the process of recording orders a number of additional activities may take place.

- Order pricing and discounting.
- Stock allocation.
- Credit checking.

The order is then processed by generating the necessary documents to instruct the warehouses to pick and despatch the order. This is followed by the preparation of invoices and the subsequent updating of the accounting and sales analysis applications. If sales orders that are attached to PO or WO are changed and the amendment affects purchase/works orders, the details will be written to an exception demand file with a report print out facility.

Within sales order entry and amend, reservation enquiries can be made at style level. Any changes made to a sales order that has reservations made against it will affect the reserved quantity on the corresponding purchase/works order. Order lines that have reservations against them will be displayed with their corresponding order type, e.g., BB, DD, etc. The sales to purchase order utility allows works orders to be detached from sales orders and downdates the reserved quantity against the works order. The circumstances in which this would be needed is if a works order is completed short with reserved sales orders still held against it. The sales order line may then be detached from the works order and processed once more to either create back to back works orders, or reserve against an existing one, depending on the sales order line method.

If MRP is on-line and the sales order maintenance reason code is active various activities will create a trigger for the next MRP run, including:

- Creating a sales order.
- Changing the date in an existing sales order.
- Changing the quantity in an existing sales order.
- Cancelling an order line.

Additional facilities are provided to create miscellaneous invoices and credit notes.

# Transcriptional Order Entry

## **1...** **2...** 1/STOEP

Transcriptional Order Entry (TOE) is identical to Conversational Order Entry (COE) except that on line allocation cannot be performed in TOE.

## Common Routines

Order entry can be broken down into the following tasks:

- Identify the customer.
- Determine defaults to condition order processing.
- Enter and maintain order text.
- Detailing products and quantities.
- Pricing and discounting.
- Stock allocation if requested.
- Credit checking.
- Extra charges and order close.

# Transcriptional Order Entry Screen 1

This is the initial screen for order entry and is used to enter the customer, the key order dates, and the customer order number. As different defaults can be set up for different delivery points, it is not only necessary to identify the account, but also the delivery address. To assist in this a name search is provided. The search, however, can be performed on any two characteristics of the customer. These are determined when the application is installed via the Company Maintenance, Customer Search Control screen.

## Fields:

### Customer No

Enter the account code of the address to which the goods are to be shipped. The code is in two parts, both must be entered. If the name search is used the customer is selected from the displayed list.

### Customer Order Ref

Enter the customer's order reference or purchase order number. This is mandatory or optional, depending upon the setting of the Order Reference Flag on the Customer Maintenance, Customer Sales Information screen.

### Customer Order Date

Enter the date of the customer's order. The default is the current date.

### Delivery Date

Enter the delivery date required. The default is the current date. It may not be prior to the current date. This date will be used as a default on all order lines unless it is changed for a particular line.

### Order Type

The default order type is defined in the Sales Order Processing company profile. The order types are defined in the ORTP descriptions type in the Descriptions file. On line allocation is controlled by order type. This is a mandatory field.

*Note: Order type 7 (rush order) will allocate stock in Transcriptional order entry. Order type 9 (direct order) will not affect inventory stock.*

### Order Source

The order sources are defined in the SRCE descriptions type in the Descriptions file. This is a memo field and is mandatory.

Press **Enter** to display the processing parameters for the selected orders on Order Entry Screen 2.

## Transcriptional Order Entry Screen 2

This screen is displayed when you press **Enter** on the initial Order Entry screen after selecting a customer for the order.

The screen displays the parameters that will be used to control the processing (including amendments or confirmation) of an order. The names and addresses for invoicing and delivery are displayed together with the processing parameters. If it is a prime currency account, details of the currency and exchange rates are displayed in the lower part of the screen. Any of the parameters and the names and addresses may be overridden and will affect this order only.

### Fields:

#### Invoice Name And Address

The name and address to which the invoice will be sent. Enter any change required for this order.

#### Delivery Name And Address

The name and address to which the goods will be delivered. Enter any change required for this order.

#### Salesman

The default salesman is displayed.

#### Mark For Division

This field is only displayed when Divisional checking is switched on at Company profile level. When displayed it allows you to enter the division for which you want to retrieve the customer Mark For details. These details are defined against the customer at item division level. The field is not mandatory.

#### Priority

The default priority to be used for the order, in any back order batch allocation run, is displayed. Enter the new priority if a change is required. There are two special settings.

99 - Force Allocation (Batch Allocation).

00 - Manual Allocation.

### **Price List**

The default price list to be used is displayed. Enter the new price list if a change is required. It must be in the same currency as the currency code specified.

### **Discount List Code**

The default discount list to be used is displayed. Enter the new discount list if a change is required. It must be in the same currency as the account.

### **Priced At**

Pricing can be set up or amended at Order, Despatch or Reprice level. The method defaults to that defined in the company profile it cannot be set at the customer.

### **Cash Discount**

The default cash settlement terms are displayed. Enter the code of the required terms. A prompt is available. It must exist on the Descriptions file - type CDSC.

### **Quotation Ref**

Optional memo field used to store a quotation number.

### **Size Mask System**

Default from the customer master. Valid entries are stored in the MSKS description type in the Descriptions file.

### **Narrative**

Default from the customer master. Valid entries are stored in the SPTS description type in the Descriptions file. The text associated with this code will print on pick lists only.

### **Order Source**

Default from Transcriptional Order Entry Screen 1.

### **Season**

Default from the Company parameter file. This may be overridden by a valid season. Must exist on Descriptions file - type SESN.

### **Currency Code**

The currency code on the price list.

### **Currency Rate Code**

The currency rate code used to define the exchange rates.

### **Currency Rate**

The currency rate converts old pricing to new pricing. The

### **Forward Invoice Date**

The As Of date for ageing in Accounts Receivable. If not entered, the As Of date will be the invoice date.

**Customer Order Date**

Displays the customer order date entered on the Selection screen.

**Delivery Date**

Displays the delivery date entered on the Selection screen.

**Functions:**

**F14**

Additional Details. This gives you access to the Additional Details window.

**F15**

Mark For. This gives you access to the Mark For Details window.

**F19**

Currency. This gives access to the Currency Override window.

**F21**

Maintain internal text to be displayed on reports and enquiries.

**F22**

Maintain external text to be printed on external documents.

## Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency** on the Transcriptional Order Entry Header Screen 2.

IN currencies are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between currencies that are considered to be an IN Currency, that is defined to the Euro, will be fixed and therefore not maintainable. Selecting **F19=Currency** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

However, if one of the currencies involved was not an IN Currency, then selecting **F19=Currency** would display the following Override Conversion Parameters window.

|                                                                           |  |                                |  |                                     |  |                      |  |

### Fields:

#### Rate Code

Select a rate code as setup in the Currency Rate Code option within Financials.

#### Rate

Or. Enter a rate using upto 5 decimal places.

#### Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

### Source to Euro

This specifies whether either the source or target currencies are defined as an IN Currency, that is linked to the Euro. The detail defaults from the Euro Currencies Maintenance option within Financials and decides the Euro calculation.

0 - The currencies will be converted directly. This is not an option for member currencies of the Euro.

1 - Uses a triangulation currency conversion. This is the option for member currencies of the Euro.

Press **Enter** to apply the rate and convert the currencies.

## Text Window (F21 & F22)

This screen is displayed when you select **F21=Internal Text** or **F22=External text**. It enables the retrieval of standard text from the customer details.

The text can then be modified as required.

- The special narrative text is displayed if internal text is requested.
- The customer standard text is displayed if external text is requested.
- This standard text may be accepted or it may be amended.

Press **Enter** to validate your entries and display Order Entry Screen 3.

## Transcriptional Order Entry Screen 3

This screen is displayed when you press **Enter** in Order Entry Screen 2. It provides detailed item and order line information.

Order lines are entered at the bottom of the screen and after acceptance rolled up into the main area. Line overrides can change prices, discounts and delivery due dates.

The minimum data to enter is product code and quantity, providing that the Bypass Order Control Quantity Flag is set to 0 (in Company Profile Screen 6). When set to 0, the quantity entered against a style regulates the individual quantities that can be entered in the colour/size/fit matrix.

### Fields:

#### Product

Enter the style code of the product to be sold. The style search may be used by using a prompt.

#### Quantity

Enter the quantity ordered for delivery on the nominated delivery due date. Optional entry depending upon the Bypass Order Control Flag setting on the company profile.

All other entries are only required if an override is to be applied.

#### UOM

Unit of measure. Enter the unit that you wish to order the item in, e.g., EA for each.

#### Price

Enter a fixed price. This overrides all other pricing and is assumed to be a net price. It must be in the currency of the customer. Price/Discount list must be blank, if a fixed price entered.

### **Source Warehouse**

Warehouse from which stock is to be allocated.

### **Del Date**

Delivery Date. Enter the delivery due date for this order line, if different from the due date for the order.

### **Price List**

Enter the price list to be applied to this line if it is different from the price list for the order. If an item is to be free of charge an FOC price list profile must be created. If no price exists on the price list the order will be suspended with an NP - no price suspense code. The price list must be in the currency of the account.

### **Del Seq**

Delivery Sequence number. A different customer delivery sequence number may be attached to each order line if required.

### **Status**

Customer credit status.

### **Suspend**

Enter an Order line suspension code in order to suspend this particular order line.

### **Disc %**

Discount Percentage. Enter the discount to be applied to this line. It is expressed as a percentage. Discount list must be blank if discount % entered.

### **Ord/m**

Order methods:

0 - Normal. This is the default method. It enables you to sell, i.e., allocate, from stock. If there is a stock shortage for the order line you can select an appropriate alternative ordering method.

1 - Make to order. This option enables you to create a back-to-back (make to order) production order. This is only allowed for manufactured items.

2 - Purchase to order. This option enables you to create a back-to-back purchase order to satisfy a particular order line quantity.

3 - Deliver direct. This creates a back-to-back purchase order for direct delivery from the supplier to the customer. It bypasses normal stock allocation for the order line.

*Note: For direct delivery to be allowed, the entire order quantity must be outstanding.*

*Note: Blanket orders may not be set to direct delivery.*

4 - Reserve. This option enables you to reserve against an existing production or purchase order. If a manufactured item it will be reserved against works orders. If unable to fully reserve against works orders it will then check for any purchase

orders and reserve against those found. If it is not a manufactured item reservations will be made against purchase orders.

*Note: Kits and kit components must be assigned order method 0 even though the component style may have a different ordering method.*

*Note: Rush Order types (type 7) and Direct Order types (type 9) are not affected by order method - they always default to Normal (0) and cannot be changed.*

## **Functions:**

### **F13**

Trailer. Displays a summary of the order values.

### **F16**

Stock. A search prompt is available to help you access stock levels for individual styles.

### **F17**

Customer. Displays customer details screen.

### **F18**

Balance. Displays a summary of customer accounts.

### **F19**

Period Balance. Displays the credit, invoice, cumulative totals and outstanding balances for a selected customer.

### **F20**

Calculator.

## Order Entry Trailer Screen (F13)

This screen displays when you press  
**F13=Trailer** in Order Entry Screen 3.

A summary of the order value is displayed. Space is then provided for up to three additional charges. A small order surcharge may automatically appear, if set up in the company profile. For charges to be added, they must have been previously set up on the Descriptions file with the Major type SUNC. When this is done, a standard value may also be set up together with the normal VAT code. When a charge code is retrieved, the standard amount will also be retrieved, if set up on the description file. This may be overridden if applicable.

### Fields:

#### Suspend

If the order has been suspended for credit or pricing reasons a suspension code and description is displayed. You can choose to manually suspend the order with an accompanying reason code.

#### Charge Code

Enter a valid charge code. It must have been set up on the Descriptions file. A prompt is available.

*Note: The charge code amounts are held in base currency on the descriptions file. This amount will be converted to the currency of the order.*

#### Amount

An amount associated to the selected charge code may be displayed. This can be overridden if necessary.

#### VAT Code

Enter a valid VAT code that exists on the Descriptions file.

A total of goods is then displayed, followed by the total VAT and the order total, i.e. goods, charges and VAT.

Any discount applicable to this order will be displayed and where appropriate will be taken into account before calculating VAT.

When you press **Enter**, validation is performed and the order is processed. A summary screen is then displayed showing the order number, the customer, the order reference and the order date.

### **Functions:**

#### **F8**

Update.

#### **F15**

Mark For.

#### **F16**

Export Details.

#### **F17**

Lost Sale.

#### **F21**

Internal text.

#### **F22**

External Text.

Press Enter to return to Order Entry Screen 3.

## Cancellation Code Window (F17)

This screen displays when you press **F17=Lost Sale** in Order Entry Screen(F13).

This option enables an order to be logged as a 'lost sale'. A reason code must be entered.

Enter the Mark for details for the customer order then press **F8=Update** to validate and update the details. You will then be returned to the screen from which you selected **F15=Mark for**.

### Functions:

#### F16

Customer. This is used to display the customer details. These details are retrieved for the customer and any divisions. They can be amended.

## Period Balances Window (F19)

This window is displayed when you press  
**F19=Period Balance** in Order Entry Screen 3.

The Period Balances window displays the credit, invoice, cumulative totals and outstanding balances for a selected customer.

Press **F12=Previous** to return to Order Entry Screen 3.

# Conversational Order Entry

## **1...** 2/STOEP

Conversational Order Entry (COE) is identical to Transcriptional Order Entry (TOE) except that on line allocation can be performed in COE. This is a flexible program which enables the customer's requirements to be met by quoting realistic delivery dates and sourcing from other locations. The standard customer selection and order defaults are used. Stock allocation may be performed based on order type. Pricing and credit checking are also performed. The order can be suspended for a number of reasons including credit stop, credit limit failure, zero price, and price override. Sales Order Line Entry is carried out in the same way as Transcriptional Order Entry (TOE). See TOE for further details.

### **Common Routines**

Order entry can be broken down into the following tasks:

- Identify the customer.
- Determine defaults to condition order processing.
- Enter and maintain order text.
- Detailing products and quantities.
- Pricing and discounting.
- Stock allocation if requested.
- Credit checking.
- Extra charges and order close.

The Style Sales Order Processing application is designed to maximise customer service and support a high level of dialogue with the customer to enable all of the sales opportunities to be explored with the customer.

## Sales Order Line Entry

Sales order lines are entered at the bottom of the screen and after acceptance rolled up into the main area. Line overrides can change prices, discounts and delivery due dates.

The minimum data to enter, is product code and quantity, if the Bypass Order Control Quantity Flag is set to 0 on the Company Profile Maintenance, (in Company Profile Screen 6).

### Fields:

#### Product

Enter the style code of the product to be sold. A search prompt is available.

#### Quantity

Enter the quantity ordered for delivery on the nominated delivery due date. Optional entry depending upon the Bypass Order Control Flag setting on the company profile.

All other entries are only required if an override is to be applied.

#### UOM

Unit of measure. Enter the unit that you wish to order the item in, e.g., EA for each.

#### Price

Enter a fixed price. This overrides all other pricing and is assumed to be a net price. It must be in the currency of the customer. The price/discount list must be blank, if a fixed price has been entered.

#### Source Warehouse

Warehouse from which stock is to be allocated.

#### Del Date

**Delivery Date.** Enter the delivery due date for this order line, if different from the due date for the order.

### **Price List**

Enter the price list to be applied to this line if it is different from the price list for the order. If an item is to be free of charge an FOC price list profile must be created. If no price exists on the price list the order will be suspended with an NP - no price suspense code. The price list must be in the currency of the account.

### **Del Seq**

Delivery Sequence number. A different customer delivery sequence number may be attached to each order line if required.

### **Status**

Customer credit status.

### **Suspend**

Enter an Order line suspension code in order to suspend this particular order line.

### **Disc %**

Discount Percentage. Enter the discount to be applied to this line. It is expressed as a percentage. The discount list must be blank if a discount % has been entered.

### **Ord/m**

Order methods. The order method is defaulted to order line where it can be changed. At stock keeping unit (SKU) level no changes are allowed as all SKUs for a line are sourced in the same way.

0 - Normal. This is the default method. It enables you to sell, i.e., allocate, from stock. If there is a stock shortage for the order line you can select an appropriate alternative ordering method.

1 - Make to order. This option enables you to create a back-to-back (make to order) production order. This is only allowed for manufactured items. Lead times are checked to ensure that the item can be made on time.

2 - Purchase to order. This option enables you to create a back-to-back purchase order to satisfy a particular order line quantity. Lead times are checked to ensure that the item can be bought on time.

*Note: If an order line is to be reserved against purchase or works orders and can only be sourced by supply orders that have exceeded its due date, a message will be displayed to inform you of this. This date can be accepted, in which case, the available due date will be used as the order line due date and the customer's requested due date will be held on the sales line as the original due date.*

3 - Deliver direct. This creates a back-to-back purchase order for direct delivery from the supplier to the customer. It bypasses normal stock allocation for the order line.

*Note: For direct delivery to be allowed, the entire order quantity must be outstanding.*

*Note: Blanket orders may not be set to direct delivery.*

4 - Reserve. This option enables you to reserve against an existing production or purchase order. If a manufactured item it will be reserved against works orders. If unable to fully reserve against works orders it will then check for any purchase orders and reserve against those found. If it is not a manufactured item reservations will be made against purchase orders.

*Note: Kits and kit components must be assigned order method 0 even though the component style may have a different ordering method.*

*Note: Rush Order types (type 7) and Direct Order types (type 9) are not affected by order method - they always default to Normal (0) and cannot be changed.*

## **Functions:**

### **F13**

Trailer. Displays a summary of the order values.

### **F16**

Stock. A search prompt is available to help you access stock levels for individual styles.

### **F17**

Customer. Displays customer details screen.

### **F18.**

Balance. Displays a summary of customer accounts.

### **F19**

Period Balance. Displays the credit, invoice, cumulative totals and outstanding balances for a selected customer.

### **F20**

Calculator.

Press **Enter** to see the matrix processing screen.

## Matrix Processing (Style Matrix) Screen

When you press **Enter** on the initial Order Entry screen, the colour / size / fit matrix is displayed, with all available colours and sizes for that style. Input the required order quantities and press **Enter**.

- If the Order Entry Trader Windows Flag is enabled on the Company Profile Maintenance Operational Defaults Screen 3, then the last five orders window and the price and discount window are displayed, above the style matrix.
- If the Available Stock In Order Entry Flag on the Company Profile Maintenance Operational Defaults Screen 3, has been set to 1 (enabled) then the available stock quantities will be shown for each colour / size / fit (style) combination. If the flag has been set to 2, free to sell stock figures will be displayed.

Tip: If you are allocating stock, interactively (normally order type 7 = Rush) do not enter an order quantity for a specific colour size combination that is greater than the available stock. The system will truncate the quantity ordered to equal that which is actually available.

- For a normal order where no on line allocation is attempted, then any order quantity may be entered against a colour/size/fit. In this instance, the stock figures displayed are for reference only.
- If the Bypass Order Control Quantity Flag was set to 0 (No) on the company profile, then the quantity entered within the matrix must equal the control quantity entered on Conversational Order Entry Screen 1.
- If after entering the matrix quantities, the next product details are known, then these can be input at the foot of the matrix, without the need to return to the product detail screen.

### Functions:

#### F12

Returns to Conversational Order Entry Screen 1.

#### F13

Availability Enquiry.

#### F14

Sourcing Enquiry.

#### F24

Further Keys (This will display **F13=Available Enquiry** and **F14=Sourcing Enquiry**).

If the cursor is positioned on a certain colour/size/fit/ and **F13=Available Enquiry** is pressed, then the stock availability enquiry program will be displayed for that particular style/colour/size/fit chosen. Exit from the availability program to return to the same position within the order entry matrix.

If the cursor is positioned on any colour/size/fit combination and **F14=Sourcing Enquiry** is pressed, then the alternative style enquiry program is displayed. This allows you to view alternatives and enquire upon the stock position for that alternative. To exit from this program will return you to the order entry matrix.

When you press **Enter** again, the following processing to take place:

- The order line is priced.
- The discount for the line is calculated.
- A check is made that the product is stored at the nominated stockroom and that the stockroom is a sales warehouse.

Following order line placement, there are additional line functions that may be performed. These may be actioned by placing the appropriate option number against the order line in question and pressing **Enter**.

## Functions:

### F13

Proceed to the order trailer screen.

### F16

Display the full stock position enquiry.

### F17

Display customer account details including credit limit and payment terms.

### F18

Display customer's current account balance information.

### F19

Display the customer's balance by period information.

### F20

Display a simple calculator.

## Order Entry Customer Selection Screen 1

Select Conversational Order Entry on the processing menu.

This is the initial screen for order entry and is used to enter the customer, the key order dates, and the customer order number. As different defaults can be set up for different delivery points, it is not only necessary to identify the account, but also the delivery address. To assist in this a name search is provided. The search, however, can be performed on any two characteristics of the customer. These are determined when the application is installed via the Company Profile Maintenance, Customer Search Control Screen.

### Fields:

#### Customer No

Customer Number. Enter the account code of the address to which the goods are to be shipped. The code is in two parts, both must be entered. If the name search is used the customer is selected from the displayed list.

#### Customer Order Ref

Customer Order Reference. Enter the customers order reference or purchase order number. This is mandatory or optional, depending upon the setting of the Order Reference Flag on the Customer Maintenance, Customer sales Information Screen.

#### Customer Order Date

Enter the date of the customer's order. The default is the current date.

#### Delivery Date

Enter the delivery date required. The default is the current date. It may not be prior to the current date. This date will be used as a default on all order lines unless it is changed for a particular line.

### Order Type

The default order type is defined in the Sales Order Processing company profile. The order types are defined in the ORTP descriptions type in the Descriptions file. On line allocation is controlled by order type. This is a mandatory field.

*Note: Order type 7 (rush order) will allocate stock in Transcriptional order entry. Order type 9 (direct order) will not affect inventory stock.*

### Order Source

The order sources are defined in the SRCE descriptions type in the Descriptions file. This is a memo field and is mandatory.

Press **Enter** to display the defaults for the selected delivery address.

## Order Entry Customer Defaults Screen

Press **Enter** on the Customer selection screen to display this Defaults screen.

This screen displays the parameters for confirmation or amendment, that will be used to control the processing of the order during its life. The names and addresses for invoicing and delivery are displayed together with the processing parameters. If it is a prime currency account, details of the currency and exchange rates are displayed in the lower part of the screen. Any of the parameters and the names and addresses may be overridden, and will affect this order only.

### Fields:

#### Invoice Name And Address

The name and address to which the invoice will be sent. Enter any change required for this order.

#### Delivery Name And Address

The name and address to which the goods will be delivered. Enter any change required for this order.

#### Priority

The default priority to be used for the order, in any back order batch allocation run, is displayed. Enter the new priority if a change is required.

There are two special settings.

99 - Force Allocation (Batch Allocation).

00 - Manual Allocation.

#### Price List

The default price list to be used is displayed. Enter the new price list if a change is required. It must be in the same currency as the currency code specified.

### **Order Source**

Default from Conversational Order Entry Screen 2.

### **Season**

Default from the Company parameter file. This may be overridden by a valid season. Must exist on Descriptions file - type SESN.

### **Discount List**

The default discount list to be used is displayed. Enter the new discount list if a change is required. It must be in the same currency as the account.

### **Priced At**

Pricing can be set up or amended at Order, Despatch or Reprice level. The default method for the customer is displayed. Enter the required method.

### **Cash Discount**

The default cash settlement terms are displayed. Enter the code of the required terms. A prompt is available. It must exist on the Descriptions file - type CDSC

### **Quotation Ref**

Quotation Reference. Optional memo field used to store a quotation number.

### **Size Mask System**

Default from the customer master. Valid entries are stored in the MSKS description type in the Descriptions file.

### **Narrative**

Default from the customer master. Valid entries are stored in the SPTS description type in the Descriptions file. The text associated with this code will print on pick lists only.

### **Customer Order Date**

Displays date entered on the Selection Screen.

### **Delivery Date**

Displays date entered on the Selection Screen.

### **Forward Invoice Date**

The as of date for ageing in Accounts Receivable. If not entered, the as of date will be the invoice date.

When **Enter** is pressed validation is performed and the Order Line Entry screen is displayed.

## **Functions:**

### **F21**

Internal text to be displayed on reports and enquiries.

### **F22**

External text to be printed on external documents.

## Order Header Text Window (F21, F22)

This screen is displayed when you select **F21=Internal Text** or **F22=External Text**. It enables the retrieval of standard text from the customer details. This can be modified as required.

- This standard text may be accepted or it may be amended.

## Order Entry Trailer Screen

When you select **F13=Trailer** on the Style Matrix screen the trailer screen is displayed.

A summary of the order value is displayed. Space is then provided for up to three additional charges. A small order surcharge may automatically appear, if set up in the company profile. For charges to be added, they must have been previously set up on the Descriptions file with the Major type SUNC. When this is done, a standard value may also be set up together with the normal VAT code. When a charge code is retrieved, the standard amount will also be retrieved, if set up on the description file. This may be overridden if applicable.

### Fields:

#### Suspend

If the order has been suspended for credit or pricing reasons a suspension code and description is displayed. You can choose to manually suspend the order with an accompanying reason code.

#### Charge Code

Enter a valid charge code. It must have been set up on the Inventory Management Descriptions file. A prompt is available.

*Note: The charge code amounts are held in base currency on the descriptions file. This amount will be converted to the currency of the order.*

#### Amount

An amount associated to the selected charge code may be displayed. This can be overridden if necessary.

### **VAT Code**

Enter a valid VAT code that exists on the Descriptions file.

A total of goods is then displayed, followed by the total VAT and the order total, i.e. goods, charges and VAT.

Any discount applicable to this order will be displayed and where appropriate will be taken into account before calculating VAT.

### **VAT Rate**

The VAT rate set up in General Ledger will be applied to the order.

When you press **Enter**, validation is performed and the order is processed. A summary screen is then displayed showing the order number, the customer, the order reference and the order date.

### **Functions:**

#### **F8**

Update.

#### **F16**

Export details.

#### **F17**

Lost sale.

#### **F21**

Internal text.

#### **F22**

External text.

## Export Details Maintenance Screen (F16)

This screen is displayed by pressing **F16=Export details** on the Order Entry Trailer screen. This enables certain export details to be recorded against the order.

1=Select

### Fields:

#### Cancellation Code

Enter a valid code that must exist on the Descriptions file - type CANC.

Details of the next order can then be entered, if appropriate.

### Functions:

#### F5

Refresh details.

#### F15

Display Extended Cancellation Code details.

# Manual Allocation

## 3/STOEP

Even though allocation may be performed interactively as part of order entry (normally order type 7) or as part of a batch run, it is sometimes necessary to explicitly allocate or de-allocate stock to orders. This can either be to a whole order or to an individual line. If it is done at line level, then the amount to be actioned may be defined. Manual allocation may be required in a number of circumstances, for example:

- A customer order has been released after being suspended, for example, for credit checking.
- The allocation priority of the order was set to 00 which ensures manual allocation will take place. This may be used for export or large orders where normal allocation would cause a disruption in the normal pattern of stock availability.

Manual de-allocation can be used to re-assign stock when a decision has been made that better use may be made of it. Stock which is listed on a picking document may not be de-allocated. If this is to be re-assigned the despatch procedure must be completed with a short or zero despatch or the picking note cancelled. This will normally back order the short shipment and release the allocated stock.

## Manual Allocation Order Selection Screen

Select Manual Allocation on the Processing menu.

This procedure may be used to perform all of the manual procedures associated with manual allocation. Three functions may be performed from this screen:

- Allocate stock to all order lines.
- De-allocate stock from all lines on the order which have stock allocated.
- Select a line for display.

There is a simple order select screen which enables the required order number to be entered.

```
OE120                ST - JBA System Test Company    USER GBJBARW2    31/10/95
                                                           14:16:13
Manual Allocation
Order number..... █
F3=Exit
05-20  SF  MW  KS  IM  II  KENB20A  PET178S2
```

### Fields:

#### Order Number

Select a Sales Order number.

Press **Enter** to display the Data Summary screen.

## Manual Allocation Data Summary Screen

This screen is displayed when you press **Enter** on the Selection screen.

The summary order data is displayed at the top of the screen. Processing is then for the whole order or by individual line depending upon the option taken. If whole order allocation is attempted but there is insufficient stock to complete this, then a warning message is displayed and each line must be processed separately. To process an order line, the following must be entered.

|                                                                       |                              |                              |                     |

### Fields:

#### Line No

Enter The Number Of The Line To Be Displayed.

Or

Press **Enter** to display each line in sequence, showing colour / size / fit options.

The requested allocation action is performed and the select order screen is displayed when the process is complete. Stock which has been allocated and printed on picking notes may not be de-allocated. If despatch has not been confirmed, the picking note may be cancelled and the stock de-allocated. This function is only available for Depots which are not warehouses (i.e. defined as such in the Warehousing application).

### Functions:

#### F13

Allocate all order lines. If there is insufficient stock, allocation must be at line level.

#### F19

De-allocate all order lines.

## Manual Allocation Line Processing Screen 1

This screen is displayed when you press **Enter** on Manual Allocation Data Summary Screen and displays all the ordered style combinations for an order line.

It enables allocation and de-allocation to be performed for the whole order line, or selection of individual style to be made. The order summary data is displayed at the top of the screen. This is followed by details of the style combinations for the order line.

| 10-02                                                                     | SA                           | MA                | KS IM II EDN400A PE9106S2 |

### Fields:

#### Sel

Enter a 1 against required lines. This will allow individual colour/size/fits to be fully or partially allocated or de-allocated.

### Functions:

#### F13

Allocate all styles for this order line.

#### F19

De-allocate all styles for this order line.

## Manual Allocation Line Processing Screen 2

This screen is displayed when you select a valid line number on the initial Line Processing screen. It enables allocation and de-allocation to be performed for an individual order line at Full Product level. It also enables part allocation or de-allocation.

The order summary data is displayed at the top of the screen. This is followed by the line details. The available stock for the warehouse is shown. If the quantity is a minus, the stock is over committed. The following entries are possible:

### Fields:

#### Next Line Number

Enter the next line number to be displayed. The next line to be processed or reviewed may be entered.

It will then be displayed following the action requested for the displayed line. If the line number is not known, then by pressing **Enter**, all line numbers will be displayed in sequence, showing colour/size/fit options.

#### Action Quantity

Enter the quantity to be allocated/de-allocated. A quantity is entered and then the action taken as indicated by the function key, **F13=Allocate entire line** to allocate, **F19=De-allocate entire line** to de-allocate.

The requested allocation is carried out. Stock which has been allocated and for which a picking note has been requested may not be de-allocated. If the sales warehouse is not defined to the Warehousing application as a warehouse, picking notes may be cancelled. The stock may then be de-allocated.

### Functions:

#### F13

Allocate the action quantity.

#### F15

Restart at order select.

#### F19

De-allocate the action quantity.

# Order Cancellation

## 4/STOEP

This procedure enables cancellation of part or all of an order with an accompanying reason code. An order, a line or SKU may be cancelled, even if a picking note has been raised, unless the picking note is for a sales warehouse which is defined to the Warehousing application as a warehouse. If an order is to be cancelled with live picking notes, it is strongly suggested that these are retrieved prior to the cancellation action taking place. Otherwise they could be used to despatch stock and the error only found when despatch confirmation is requested.

*Note: If a sales order or line is cancelled using order cancellation the change will be reported on the demand exception file.*

## Order Cancellation Selection Screen

Select Order Cancellation on the Processing menu.

This screen enables either the cancellation of the order, individual order lines or SKU lines.

Enter an order number.

#### Cancellation Code

Enter a valid cancellation/reason code. It must be a valid code held on the descriptions file against type CANC.

## Order Cancellation Header Screen

This is displayed when you press **Enter** when a valid order number has been entered on the selection screen.

The summary order data is displayed at the top of the screen. Processing is either for the whole order, individual line or SKU depending on the option taken. A cancellation code must be entered and will default to line level, unless overridden.

### Fields:

#### Line Number

Enter the number of the order line at which the order line display should start. Press **Enter** to roll through the order lines on the order line display.

#### Cancellation Code

Enter the appropriate cancellation reason code. It must be a valid code held on the descriptions file against type CANC.

If the whole order cancellation is requested the subsequent screen sets out details of the requested picking notes and invites confirmation. If there are no outstanding picking notes, confirmation is not required. If a line number is entered, the next screen output not only includes the details of the requested picking notes, but also of the selected line.

#### Cancel SKUs At Line Level

This facility enables you to select specific SKU lines for cancellation against a given order line (except for kit items). You can enter the following:

0 - No.

1 - Yes. If cancellation at SKU level is set to 1 all SKUs that have been defined against that particular order line will be displayed.

**Functions:**

**F12**

Order Cancellation Selection Screen.

**F13**

Cancel the whole order.

## Order Line Cancellation Screen

This screen is displayed when a specific line is entered on Order Cancellation Header Screen and enables the cancellation of a specific order line.

In addition to summary details of the order header and requested picking notes, the status of the requested line is displayed.

### Fields:

#### Line No

Enter the next line number to be displayed.

When you press **Enter** and no line number is entered, the following line will be displayed.

#### Cancellation Code

Enter the appropriate cancellation code. It must be a valid code held on the descriptions file against type CANC.

If you select **F13=Cancel Line** the line to be cancelled. If a line number is present when **F13=Cancel Line** is pressed, the line will be cancelled and the new requested line displayed.

### Functions:

#### F12

Returns to Order Cancellation Header Screen.

#### F13

Cancel the line. If a line number is present it will be displayed following the cancellation of the requested line.

Or

Cancel Selected SKUs. If Cancel SKUs At Line Level has been selected, **F13=Cancel Line** will cancel the selected SKUs.

# Order Amendment

## 5/STOEP

Existing orders may be amended once they have been entered. Some of these changes are achieved by specific single function procedures, like cancellation, allocation and release from suspension. If however, it is required to change the details of the customers requirements or the trading agreement, this is done in the order amendment procedure.

As with order entry, there are three phases of amendment, but in this instance it is only necessary to perform the required phase. Thus, if an additional charge is to be added only the order trailer need be processed.

In general it is possible to amend anything on an order that is sensible to amend. However, it is not possible to change a customer or indeed the product on an order line. For example, if one hundred of an item were ordered and seventy despatched the Order quantity cannot be reduced to fifteen. Apart from reasonable constraints everything can be amended, including adding additional items to the order.

## Order Amendment Screen

Select Order Amendment on the Processing menu. Several functions can be performed from this screen. These are, selection of the order to be amended, and identification of the type of amendment to be made.

```

05-27  SF  MW  KS  IM  II  KENB20A  PET178S2
```

### Fields:

#### Order Number

Enter the number of the order to be amended.

#### Detail Required

Enter one of the following:

- 1 - Update header.
- 2 - Update line.
- 3 - Update trailer.
- 4 - Update export details.

#### Size Mask System

Enter the appropriate size mask code. Optional entry. This will determine the size headings in the matrix.

After you have selected an option with which to amend the order press **Enter** to display the required screen.

Tip: Once selected, the processing of the

screens and functions are as per the Order Entry routines.

# Suspended Order Release

## 6/STOEP

Orders may be suspended for a number of reasons. This may be done automatically, because a non-standard situation has arisen during order entry, or by the operator. The automatic actions are caused by:

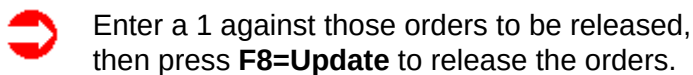

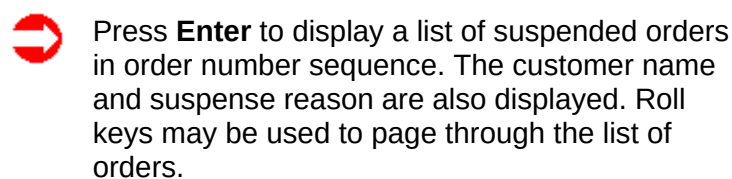

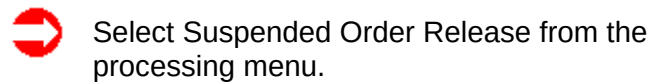

- Customer on credit stop.
- Credit limit exceeded.
- An override price entered requires authorisation.
- No price in the price list resulting in a zero price.

Additional reasons can be set up in the descriptions database to be used for manual order suspension. One possible use is to record and price orders with reason code Q for quotations. Acknowledgements could then be used as a Quote and Suspend Order Release used to convert the quote into an order.

It is possible to select the type of suspended orders that may be shown for release. This is enabled by setting the return code against the suspended orders release task code in the Application Manager maintain Tasks option.

- If the return code is set to Blank (the default), then all suspended orders will be shown.
- If the return code is set to 01, all suspended orders except for CS (Credit Stop), CL (Credit Limit Exceeded and LT (Litigation) will be displayed.
- If the return code is set to 02, only suspended orders for CS (Credit Stop), CL (Credit Limit Exceeded and LT (Litigation) will be displayed.

The above will only happen if an individual order is not selected.

# Picking Note Cancel

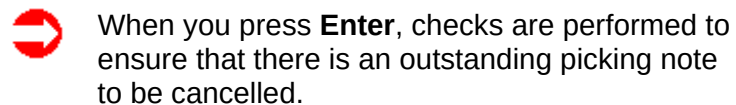

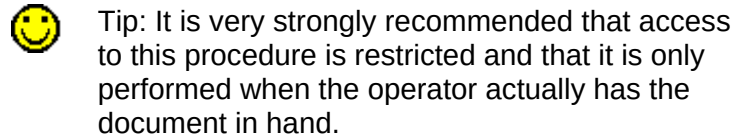

## 7/STOEP

This procedure enables a previously printed picking note to be cancelled. The stock which was allocated on the picking note remains allocated.

Once a picking note has been cancelled it cannot be confirmed as despatched. It is important that picking notes which are cancelled are either destroyed or defaced in such a way as to render their use as an authority to despatch impossible. If a picking note was issued for a sales warehouse defined to the Warehousing application as a warehouse, it may only be cancelled up to the time that it is selected for picking action and printed on a picking list by Warehousing.

# Confirmation Of Despatch

## 8/STOEP

When all or part of an order has been despatched, it is necessary to perform a number of major updates. These are:

- Change the order to reflect the despatch.
- Reduce the stock of the items despatched.
- Create an invoice request.

There are two procedures to accept this information. The first enables the review and amendment of each despatch prior to confirmation and the second limits input to a list of despatches to be submitted as a batch job. This procedure enables review and amendment. The principle of entry is that only lines requiring change must be entered.

This applies both to the despatch lines and the additional charges. The quantity to despatch can be increased providing the parameter is set on the company control file and the available stock would not become negative.

## Confirmation Of Despatch Screen

This screen is used to enter the despatch to be confirmed. The despatch note number is in two parts; the order number and the picking note sequence number. The first despatch note has a picking note sequence of zero. Both parts of the number must be entered.

```
OE125          ST - JBA System Test Company    USER GBJBARW2  31/10/95
                                           14:26:07

Order number..... █
Picking note....?.  █

F3=Exit  F4=Prompt

05-25  SF  MW  KS  IM  II  KENB20A  PET178S2
```

### Fields:

#### Order Number

Enter the order number for which despatch is to be confirmed.

#### Picking Note

Enter the picking note sequence number. Up to 10 numbers may be entered, per picking note, to produce a consolidated despatch note.

When you press **Enter**, if there is an unconfirmed despatch note with the required number, it is displayed. For other methods see Confirmation of Despatch in the Batch Processing section.

## Confirmation

Following the completion of confirmation, the select screen is displayed, but it now includes confirmation of the despatch just made and the invoice number that will subsequently be generated. This should be written on the despatch note copy, to aid manual reconciliation if necessary.

# Invoicing

Invoices and credit notes are raised and printed on the basis of one document for one action; that is, one invoice for each despatch and one miscellaneous invoice or credit per request.

There are two stages in the production of an invoice and credit note. These are:

- Generate the invoice/credit note.
- Print the document and update the Ledgers.

At any time a procedure may be run to print the documents and update the Ledgers. It is obviously essential that this procedure be run not less than once per day.

When an invoice is raised for a despatch from a sales order it can be at price ruling at the time of order or despatch. This re-pricing is performed by the same procedures that update the Ledgers and print the invoice.

All invoices and credit notes are raised and printed in the currency of the Sales Account to which they are posted.

In order to simplify the auditing of invoices, a single number sequence is used for each Sales Company. This number sequence includes both invoices and credit notes.

## Credit Notes And Invoices

The options for credits and invoices are performed in an identical fashion. The facilities for the identification and selection of a Customer are the same as for order entry. Similarly, special addresses may be entered together with any necessary explanatory text for the document or the document lines.

As with order entry, pricing and discount may be standard for the customer or manually entered.

It is possible to reverse out an invoice by entering its invoice number in a field called Original Document Reference. This will create a reverse entry of the original invoice.

There are two types of Miscellaneous Invoice or credit note that can be issued. This may be for a purely financial (non stock) transaction or can include the corresponding stock update. If an under charge on an invoice is to be corrected, a miscellaneous invoice or credit note without stock update is used. If, however, a direct sale was made at a trade counter, a miscellaneous invoice with stock update would record the sale and the stock issue.

Where a customer receives goods which have been incorrectly labelled or packaged, or where some of the goods are rejected or not sold, the customer may pay less than the full amount invoiced. Credit note processing is supported by a charge back document or debit note. This would be raised by the customer to cover the underpayment amount. The customers Chargeback reference would be entered when the sundry credit note or returns credit note is created. It may also be entered and amended when returns notes are created.

Any chargeback number would be printed on the credit note and in credit enquiries. It is also passed to Accounts Receivable as a reference for the credit note transaction.

Tip: Chargebacks are allowed for credit notes with or without stock update.

There are four options for miscellaneous invoices and credit notes, each will call a common procedure, but will perform the updating described in its option title, for example:

### **9/STOEP CREDIT NOTES (NO STOCK UPDATE)**

Example

A customer may have been overcharged for some goods, so a financial only adjustment is needed.

### **10/STOEP MISCELLANEOUS INVOICES (NO STOCK UPDATE)**

Example

A customer may have been undercharged for some goods so a financial only adjustment is needed.

### **11/STOEP CREDIT NOTES (STOCK UPDATE)**

### Example

A customer may have returned some goods in good condition, so both a financial and stock adjustment are needed.

**1...** **12/STOEP MISCELLANEOUS INVOICES**  
**2...** **(STOCK UPDATE)**

### Example

A customer might buy goods from a trade counter, so there is no need to use the order entry facility . However, stock adjustments have to be made and an invoice produced.

***Warning: As the screens are similar for each of the four options, only one option is described in detail.***

## Sundry Invoicing And Credit Notes Screen 1

Select the Sundry Invoice / Credit Notes option you require on the Processing menu.

This screen enables the selection of the customer for whom the document is to be raised. The type of transaction is identified. The order and delivery dates are set to the current date.

|                       |                              |               |                           |

| Customer order date.. | 21195                        |               |                           |
| Delivery date.....    | 21195                        |               |                           |
| Lowest paid pricing.. | 0                            | 1=Yes, 0=No   |                           |
| F3=Exit F4=Prompt     |                              |               |                           |
| 05-24                 | SF                           | MW            | KS IM II KENB20A PET178S2 |

### Fields:

#### Customer Number

If the Account code and delivery address is known it is entered, otherwise a prompt may be used for a customer search.

#### Customer Order Ref

Customer Order Reference. Enter the reference number of the customer's order. This may be set as mandatory or optional via the Order Reference Flag on the Customer Maintenance, Customer Sales Information Screen. Even if it is not mandatory every effort should be made to enter the correct customer order number to aid cross-referencing.

#### Customer Order Date

Enter the date of the customer's order. The default is the current date.

#### Delivery Date

Enter the date that delivery was made to the customer. The default is the current date.

#### Lowest Paid Pricing

0 - No.

1 - Yes.

If this indicator is set to 1 then the system will retrieve the lowest selling price applicable to the product/customer combination in order to lessen the impact on the company should a credit note be raised in error.

### **Update Commission**

Applies to credit notes only. Indicates whether the salesmen commission is to be updated by this transaction.

Press **Enter** to validate your data and display  
Sundry Invoicing And Credit Notes Screen 2.

## Sundry Invoicing And Credit Notes Screen 2

This is displayed when you press **Enter** to validate your data on the initial screen.

Sundry Invoicing And Credit Notes Screens 2 and 3 display the processing defaults associated with the selected customer account and enable confirmation and amendment. If the account is for any currency other than the Accounts Receivable base currency, the details of the currency are also displayed. You can change any of the standard defaults for the customer.

### Fields:

#### Invoice And Delivery Name And Address

The invoice and delivery name and address for the customer are displayed. These may be amended if differing addresses apply to this credit note/miscellaneous invoice.

Press **Enter** to display Sundry Invoicing Screen 3.

## Sundry Invoicing And Credit Notes Screen 3

This screen is displayed when you press **Enter** on the second screen and enables you to enter various financial and despatch details for the invoice raised.

### Fields:

#### Original Doc. Ref.

This can be used in two ways:

If a miscellaneous invoice is to be raised as a supplement to a normal invoice, then enter the number to aid cross-reference.

*If, however, an existing invoice is to be credited, enter the number and a credit note mirroring the invoice will be presented on the subsequent screens for review, amendment and acceptance.*

#### Reason Code

A reason must be given for this type of transaction. Enter the code or select it from a prompt.

*Note: The reason for credit will control which invoices/credits go into Sales Analysis as value only and which go in as quantity and value. This allows financial credits (i.e. wrong price charged) to only update value in Sales Analysis.*

*Note: If the reason code is set up with a parameter limit at zero then quantities will be taken into Sales Analysis, otherwise quantities will not be taken into Sales Analysis.*

### **Despatch Method**

The method of despatch must be identified. Enter the code or select it from a prompt.

### **Period Number**

The account period to which the transaction will be posted. The default is the current Sales Order Processing period. It may be earlier or later.

### **Warehouse**

The normal stockroom from which deliveries are made is displayed. This may be changed to any valid stockroom.

### **Price List Code**

The price list to be used for pricing the document. The customers standard price list is displayed. It may be changed, but only to a price list in the same currency as the account.

### **Discount List**

The code of the discount list to be used for the document. The customers standard discount list code is displayed. It may be changed, but only to a discount list in the same currency as the account.

### **Cash Discount Code**

The code of the cash settlement discount to be used for the document. The customers standard discount is displayed. It may be changed to any valid settlement terms.

### **Currency Code**

Currency code for this transaction.

### **Currency Rate Code**

Prime currency rate code.

### **Currency Rate**

The currency rate for the rate code. To enter a fixed rate blank out the rate code and put the rate that you want to apply in this field.

### **Multiply Divide**

Multiply or Divide

If 1 is specified, the currency rate will be used to multiply the transaction value to get a base value.

If 2 is specified, the currency rate will be used to divide the transaction value to get the base value.

### **Season Code**

Enter a valid season code to which this transaction relates. This may be prompted for.

### **Salesman**

Enter the code for the salesperson responsible for the sales invoice.

### **Functions:**

#### **F13**

Payment details.

#### **F14**

Additional Details

#### **F21**

Internal Text

#### **F22**

External Text

*Note: If the account is in any currency other than the base currency of Accounts Receivable details of the currency, currency rate code and exchange rate are displayed. The exchange rate may be changed for this invoice.*

*Note: If the VAT only invoice reason code is used then the invoice or credit generated will have a zero goods value and a VAT value equivalent to the quantity multiplied by the price entered. The product must be the VAT only product code set up on the company profile, this facility can be used to credit customer charged VAT in error or at the wrong rate. It is also possible to invoice if VAT was not charged or was under charged.*

## Additional Details Window (F14)

This screen is displayed when you select **F14=Additional Details**. This screen enables you to enter a miscellaneous analysis code which can be used during the AFI extract process to extract all credit/invoice line details for records and reports.

### Fields:

#### Miscellaneous Analysis Codes

1/2/3/4. Enter a 12 character code broken down into three characters per field. This code is validated against the Descriptions file.

## Invoice Header Text Window (F21, F22)

This is displayed when you select **F21=Internal Text** or **F22=External Text**.

Text may be added to a document, either to be printed or to act as an internal explanation. This is achieved by taking the appropriate function key. On completion of this, a screen allowing the entry of the line details is displayed.

*Note: If the Credit Note without stock update option selected, an additional field, stock receipt reference, is displayed on the customer defaults screen. This is to cater for the instance where a returned item is booked into stock first. When raising the Credit Note the appropriate item details can then be retrieved.*

## Sundry Invoicing And Credit Notes Screen 4

The screen is displayed when adjustments have been made and you press **Enter** on the second screen. It enables entry of the items for which the credit or miscellaneous invoice is to be raised.

The manner of entry is similar to order entry in that the minimum required is the product code and the quantity. The standard discounting and pricing rules will then be applied. Again, as with order entry a net price or override discount may be entered. For any line there are two mandatory entries; the item numbers and the quantity, others are only made to override the defaults.

### Fields:

#### Untitled

The untitled field is used to select one of three options:

- 1 - Amend Component. This enables you to amend various details on the credit note.
- 2 - Text. This enables you to enter text against a line on the credit note.
- 3 - Additional Details. This displays the miscellaneous analysis code set up for a credit note line.

#### Product Code

Enter a valid style/colour/size/fit code. A prompt is available.

#### Quantity

A quantity must be entered. If a value is to be credited against a delivery it should be divided by the despatch quantity and the resulting price should be entered in the price override fields as a net price and the despatch quantity in this field.

All other fields are optional.

### **Price**

This is in the prime currency of the account. It is a net price and includes all discounts apart from settlement discount.

### **Lot**

[Not used]

### **Disc %**

Discount percentage. This is the document line discount. Only a percentage may be entered.

### **P List**

Price list. If the price list to be used for this line is different from the list entered for the document defaults it should be entered here. The price list must be in the same currency as the account. If no price exists on the price list for the product, a line will be generated for zero value.

However, when the print invoice/credit note procedure is run re-pricing is attempted using the price at despatch routine. If this fails the document is not printed, the accounts receivable is not updated and it is reported on an exception report.

### **D List**

Discount list. If the discount list to be used for this line is different from the list code entered for the document default enter it here. The discount list must be in the same currency as the account.

### **VAT**

Enter the required VAT code if the standard is to be changed. A prompt of valid codes is available.

### **Txt**

Text. To print additional text for the line enter a 1. This will result in the standard text window being displayed.

## **Functions:**

### **F15**

Restart.

To add more lines to the document, use **Page Up / Page down**. The extension of the lines is displayed by pressing **Enter**.

## Sundry Invoicing And Credit Notes Screen 5

To add extra charges or credits to a miscellaneous invoice or raise a charge only invoice or credit, up to three such charges may be added.

For a charge to be added it must already have been set up on the Descriptions file with the Major type SUNC. When this is done a standard value may also be set up together with its normal VAT code. When a charge is retrieved the standard value will be retrieved as well, provided that an entry has not been made in the amount column. Make the following entries:

### Fields:

#### Charge Code

Enter a valid charge code. It must have been set up on the descriptions file (type SUNC). A prompt is available.

#### Amount

Enter the charge amount. If a standard charge exists on the descriptions file and no amount is entered it will be retrieved.

The amount is held in base currency on the descriptions file, and will be converted to prime currency at the rate specified.

#### VAT Code

Enter the VAT code. It is only necessary to enter this code if the normal code is to be changed.

When you press **Enter** the document is accepted and a summary screen displayed showing the document number, the customer, order reference and the date.

*Note: If a miscellaneous invoice or credit has no price because one did not exist in the price list at the time the document was entered, pricing will be attempted. If this fails the document will not be printed, the ledgers will not be updated and an error will be written to the Invoices Not Priced report.*

## **Functions:**

### **F15**

Restart.

## Sundry Invoicing And Credit Notes Screen 6

This screen is displayed when you have pressed **Enter** to validate entries on the document lines screen 4. It displays details of the invoice created during sundry invoice processing and enables you to confirm and complete the invoice.

Returns to Sundry Invoicing Screen 5.

#### F15

Restart.

#### F16

Complete invoice/credit note.

# Confirmation Of Packing

## 13/STOEP

This procedure extends the standard pick and despatch procedure by adding an additional packing step. Packing identifies the physical number of cartons to be shipped, which contain the inventory quantities being released.

This is an optional step and is only required if the Use Packed Quantity in Despatch flag on the Company Profile Maintenance, Operational Defaults Screen 3 screens is set to 1 (Yes).

## Confirmation Of Packing Screen 1

Select Confirmation of Packing on the Processing screen.

This screen is used to select the order number for confirmation.

|                         |                              |               |                           |

### Fields:

#### Qty To Pack

Quantity to pack. If you are not shipping the entire picking note line quantity of items requested, then input the actual quantity of items to be 'packed'.

#### Position To

This enables you to enter a live number from which to commence the display.

When you press **F8=Pack** the packed quantity is accepted and the selection screen is displayed.

*Note: After completion of the confirmation of packing routine, the confirmation of despatch routine must be run*

### Functions:

#### F8

Pack. Fill quantity packed field with same quantity listed in quantity picked field, i.e. 'pack all items picked.'

#### F11

Fold. This adds the style description to the confirmation of packing screen.

**F12**

Previous. Returns to Confirmation of Packing Screen 2.

# Copy Sales Order

## 14/STOEP

The purpose of this procedure is to create a new sales order by copying an existing one.

## Copy Sales Order Screen

Select Copy Sales Order on the Processing menu.

This option enables you to create new orders by copying existing orders. Normal and reservation order methods will be picked up by batch allocation.

*Note: For copy orders, the order methods will be retrieved from the item rather than copied from the order.*

### Fields:

#### Order Number

Enter a valid order number you wish to copy.

#### Copy Suspense Codes

Indicate whether to copy any suspended order lines.

#### To Customer Number

Enter a valid customer number and delivery address. A prompt is available.

#### Customer Order Ref.

Optional. Enter a customer reference if appropriate.

#### Copy Pick Percentages?

1 - Copy.

2 - Retrieve.

#### Customer Order Date

Default to current date. Override with a valid date, if appropriate.

**Delivery Date**

Default to current date. Override with a valid date, if appropriate.

**Cancel Date**

The cancellation date for the order.

**Do-Not-Ship-Before Date**

Enter the earliest shipping date for the order.

Pressing **Enter** validates the information.

# Blanket Order Distribution

## 15/STOEP

This option enables a whole or master order to be selected. 'Call offs' can be made against the allocated quantity of the order. The allocated order quantity can then be re-distributed around selected delivery points of the customer who originated the order. New orders are then raised for the selected delivery points and the allocated stock is then transferred from the whole or master order to the 'call off' order.

Tip: Blanket orders must be set up in the Descriptions file as type B in Major type **ORTP**. The order type must then be defined against a sales order.

# Blanket Order Distribution Screen 1

Select Blanket Order Distribution on the Processing menu.

This screen enables you to select a blanket order.

|                                                                                                                        |                              |                |                      |

## Fields:

### Order Number

This is the master order number.

### Order Reference

The reference number given to the customer's order.

### Customer Order Date

The date of the call offs. The default is the current date, which can be changed.

### Date Delivery Req

The date on which the delivery is to be made to the customer.

### Create Orders By

You have two options:

- 1 - Style/Branch. This selects one line orders then allows you to set up multiple branches.
- 2 - Branch. This selects multiple branches and allows one line orders to be set-up.

Press **Enter** to display the second screen.

## Blanket Order Distribution Screen 2

This screen is displayed when you press **Enter** on the initial screen. It enables you to select the order line for your blanket order.

### Fields:

#### Sel

Select. Use a 1 to select the line.

#### Seq

The delivery point of the customer.

#### Customer Name

This shows the name of the delivery point/branch of the customer.

#### Ordered Quantity

The quantity called off for the sales order.

#### Avail Qty

Available quantity. This is the quantity available to be redistributed that is, the allocated quantity of the order.

*Note: If the decision was made on the first screen to create an order by Style/Branch, this screen would allow a selection of multiple delivery addresses. Also, the screen displayed allows you to select multiple one line orders. This in turn causes one order to be created for each delivery address.*

*Note: If the decision was made to create an order by Branch, the screen would allow one delivery point/branch to be set up with as many lines as required.*

When you press **Enter**, the style matrix is displayed.

# Quantity Entry Delivery Sequence Window

 This screen is displayed when you press **Enter** on the third screen. The screen displays the delivery points or branches of the customer to enable you to enter the Stock Keeping Units (SKUs) for the style selected.

# Bulk Order Amendment

## 16/STOEP

The purpose of this procedure is to effect mass changes to all existing sales orders. Amendments to existing sales orders include product (style) replacements, due date changes, customer delivery address changes, and product (style) colour/size/fit amendments.

# Bulk Order Amendments Screen

Select Bulk Order Amendments on the Processing menu.

This screen enables you to choose which type of amendment to make.

```

AP490          ST - JBA System Test Company      USER GBJBARW2    31/10/95
                                           14:31:01

Type of Amendment:  _

1. Product Replacement
2. Due Date Amendment
3. Delivery Address Amendment
4. Product Size Amendment

F3=Exit
05-23  SF  MW  KS  IM  II  KENB20A  PET178S2

```

**Fields:**

### Type Of Amendment

Choose one of the following four types of sales order amendment:

- 1 - Product Replacement.
- 2 - Due Date Amendment.
- 3 - Delivery Address Amendment.
- 4 - Product Size Amendment.

## Bulk Order Amendment Details Screens

There are four types of mass change amendment details.

Tip: All functions are the same for each of the amendment details screens.

## Product Replacement Screen (Option 1)

This screen is displayed when you press **Enter** after selecting option 1 on the initial screen.

The screen allows all order lines requesting one particular style to be changed to another. Input the existing style number and the new, desired style number.

## Due Date Amendment Screen (Option 2)

This screen is displayed when you press **Enter** after selecting option 2 on the initial screen.

The screen allows the amendment of delivery due dates, for all sales orders in a given date range, for a particular style code. Input the style code in question, the date range over which you wish sales orders to be amended, and the new delivery due date for that style.

## Delivery Address Amendment Screen (Option 3)

This screen is displayed when you press **Enter** after selecting option 3 on the initial screen.

The screen allows the amendment of orders to a different customers delivery address for all sales order lines due after a specified date. Input the customers account code and delivery address sequence code whose orders you wish to amend. Input the new delivery sequence code for the customer. Input the due date after which orders will ship to the new delivery address.

## Product Size Amendment Screen (Option 4)

This screen is displayed when you press **Enter** after selecting option 4 on the initial screen.

The screen allows the change of colour/size/fit combinations on all orders for a specific style. Input the style code to be amended. Also input the colour/size/fit combination of the style which is to be changed.

# Sales To Supply Order Amend

## 17/STOEP

This option is used in conjunction with the audit reports produced if delivery/receipt dates are changed on purchase orders that affect the sales orders attached to them.

Enhanced allocation allows sales orders to be reserved against incoming purchase orders. This means that current available stock need not be allocated to sales orders which can be fulfilled by incoming stock.

It may be necessary due to a change in circumstances to disconnect /break the link between sales orders and purchase orders, this option enables that disconnection of the link.

# Sales To Supply Order Amendment Screen 1

 Select Supply Order Amendment on the Processing menu.

The initial screen enables a purchase order or sales order to be entered.

### Fields:

#### Sel

Select an order line to amend by placing a 2 against the line required to detach the sales order from the purchase order line.

#### Sales Line Number

The sales order line number.

#### Purchase Line No

The corresponding number for the purchase order and line number.

#### Supplier Or Customer Name

The name of either the supplier or the customer

#### Qty

The quantity entered on the order line.

#### Delivery Date

The date of delivery for the stock on that specific order line.

#### Product/Description

The product code and its relevant description.

When you press **Enter** the option will:

- Update reducing the reserved quantity on the sales order.
- Update reducing the reserved quantity on the purchase order.
- Delete the record.

## Process Orders By Customer Purchase Order Number

### 18/STOEP

This option allows the selection of a customer purchase order number, and displays the orders associated with it. The associated dates can then be updated or the orders can be cancelled.

# Process Orders By Customer Reference Screen 1

Select Customer Reference on the Processing menu.

The selection is made by Customer code and their reference, that is their purchase order number, or ship with reference i.e. the reference code defined against the sales order. This selects all sales orders with the same ship with reference.
