Chapter 5

Batch Processing

Batch Processing Options

This section covers the three areas of Batch Processing options:

- Batch processing.
- Document preparation.
- Fast batch entry.

The section deals with the processing functions which can be submitted as batch jobs.

Batch Allocation

1... **1/STOEB** **2...**

This procedure reviews all outstanding orders regardless of how they were entered into the system, and endeavours to allocate stock. This is a complex decision and a number of factors must be considered:

- The relative priority of orders.
- The required due date.
- Credit control applications.
- Is part shipment of the order acceptable.
- Are back orders allowed.

These obviously interact with each other in contributing to the allocation decision.

Orders are considered for allocation by reviewing them in priority and then due date sequence. They are excluded from allocation if any of the following is true:

- The due date is beyond the allocation time fence (this is a forward order).
- The customer is on credit stop.
- The credit limit is exceeded prior to allocation commencing.
- The order is suspended prior to allocation.

The order is suspended for credit exception if either of the credit checks fail.

Once an allocation has been performed the allocated order balance is increased. The available to sell order balance is decreased and the allocated order value (used for credit check) is updated on the customer record.

On the batch allocation submission screen you may specify which orders are to be selected by the batch allocation procedure by up to 4 warehouses, up to 10 selected styles, or by a range of product group major and minor codes, range of divisions, customers, and customer classes. All these fields may be prompted for, but must all be valid entries.

A scaling factor may be input to allow limited stock to be allocated across a greater number of orders than would otherwise be the case. The scaling factor % limits the percentage of the order quantity allocated against all selected orders.

Stock from scheduled purchase order deliveries can be allocated based on a date range, providing the parameter is set on the company profile. If no entries are made in any of the above fields then allocation will be attempted against the total order file.

Functions:

F13

Apply different scaling factors to individual style/colour/size /fit combinations.

Output

Three reports are produced from the run.

Fields:

Credit Exception Report

Showing a list of orders where allocations have been prevented because a credit exception has arisen.

Stock Exception Report

Showing a list of orders where allocations have been prevented by insufficient stock being available.

Allocation Audit Report

Shows all orders/order lines successfully allocated during Batch Allocation.

During allocation the system:

- Attempts to allocate stock on all outstanding order lines, regardless of how entered into the system, in priority sequence then due date sequence.
- Performs a credit check both before and during allocation; a failure at any point suspends either part of or all of the order.
- Performs stock checking (Note - batch allocation is also affected by key sizes).
- Produces a report of all orders/order lines successfully allocated (Allocation Audit Report).
- Produces a report of all orders/order lines which have failed because of credit failure (Allocation Credit Exception Report).
- Produces a report of all orders/order lines which have failed because of stock failure (Allocation Stock Exception Report).

Credit checking is performed both before and during allocation.

Note: What actually happens when the on-going credit checks and stock checks fail depends on whether the customer allows part orders and whether the customer allows back orders.

Direct Orders Update

2/STOEB

This option will allocate and print all direct orders with a quantity of stock outstanding against them.

The system operates a batch function to process this option.

Press **F8** to confirm and submit the job to batch.

Picking Note Cancel

3/STOEB

This procedure enables a previously printed picking note to be cancelled. The stock which was allocated on the picking note remains allocated.

Once a picking note has been cancelled it cannot be confirmed as despatched. It is important that picking notes which are cancelled are either destroyed or defaced in such a way as to render their use as an authority to despatch impossible. If a picking note was issued for a sales warehouse (defined to the Warehousing application as a warehouse), it may only be cancelled up to the time that it is selected for picking action and printed on a picking list by Warehousing.

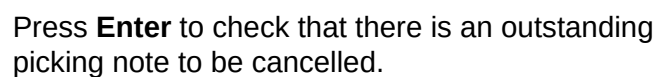

Tip: It is very strongly recommended that access to this procedure is restricted and that it is only performed when the operator actually has the document in hand.

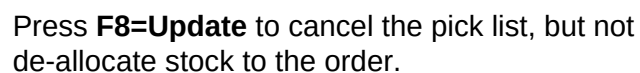

Fields:

The customer number for the picking note to be cancelled.

The picking note sequence number.

The customer's name for whom the goods will be picked is displayed.

Confirmation Of Despatch

1... 4/STOEB
2...

Select Confirmation Of Despatch on the Batch menu.

This method is designed to minimise the time taken to request confirmation. It is essentially a batch process where a number of despatches are entered into a batch and then a separate job is requested to perform the updating.

The following should be done:

- Check that all items were despatched as requested, i.e. no quantities require changing.
- Sort into batches where the despatch method and the despatch date are the same.
- Check that no change is required to extra charges.
- Batch or lot number must be entered if the item is batch/lot controlled.

[illegible]

Fields:

Despatch Date

The current date is the default, but this may be changed by over keying.

Despatch Method

Enter the method used for all the despatches. A prompt is available to display the despatch method codes.

Employee No.

Employee number who made the despatch. Used for enquiry purposes.

Carrier Code

Enter a code to indicate the carrier used to deliver the goods to the customer, used when requesting carriers consignment notes. Set up on Descriptions with major type CARC.

Enter for each picking note:

Picking Note

Enter the order number and the picking note sequence number.

Customer Code

Enter the customer's account code.

The picking note is matched against the customer and, if correct, is added to a list of despatches to be confirmed. In order to action all of the requests outstanding, Confirmation of Despatch - processing is submitted to the batch job queue.

Batch Deallocation

5/STOEB

Select Batch De-allocation on the Batch menu.

This process is used to deallocate stock previously allocated to an order.

Once deallocation is performed the allocated order balance is decreased. The available to sell order balance is increased and the allocated order value (used for credit check purposes) and is updated on the customer record.

You can specify which orders to deallocate by specifying:

- A range of product group major/minor codes.
- Up to 10 selected styles.
- Up to 4 warehouses.

You can input a scaling factor to allow a limited amount of the allocated order stock to be deallocated. The scaling factor % limits the percentage of the order quantity deallocated against selected orders.

Note: If no selections are made in the scaling factor field, the system will attempt to deallocate the whole order.

Order Cancellation

6/STOEB

Select Order Cancellation on the Batch menu.

This procedure enables cancellation of part or all of an order with an accompanying reason code. An order or a line may be cancelled, even if a picking note has been raised, unless the picking note is for a sales warehouse which is defined to the warehousing application as a warehouse. If an order is to be cancelled with live picking notes, it is strongly suggested that these are retrieved prior to the cancellation action taking place. Otherwise they could be used to despatch stock and the error only found when despatch confirmation is requested.

Order Cancellation Screen 1

This screen enables either the cancellation of the order or of individual order lines.

```
OE115          ST - JBA System Test Company    USER GBJBARW2    31/10/95
                                                    14:19:58

F3=Exit  F4=Prompt

05-25    [Logo]    MW    KS    IM    II    KENB20A    PET178S2
```

Fields:

Order Number

Enter the order to be cancelled.

Cancellation Code

Enter the appropriate cancellation code.

The second screen is then displayed when you press **Enter**:

Order Cancellation Screen 2

This screen is displayed when you press **Enter** on the initial screen.

The summary order data is displayed at the top of the screen. Processing is either for the whole order or by individual line depending on the option taken. A cancellation code must be entered and will default to line level, unless overridden.

F3=Exit F4=Prompt F12=Previous F13=Cancel whole order			
20-26 SF MW KS IM II KENB20A PET178S2			

Fields:

Line No

Enter the number of the order line at which the order line display should start. (Pressing **Enter** rolls through the order lines on the order line display.)

Cancellation Code

Enter the appropriate cancellation reason code.

If the whole order cancellation is requested the subsequent screen sets out details of the requested picking notes and invites confirmation. If there are no outstanding picking notes, confirmation is not required. If a line number is entered, the next screen output not only includes the details of the requested picking notes, but also of the selected line.

Functions:

F13

Cancel the whole order.

Order Cancellation Screen 3

This screen is displayed when you select an order line to cancel.

It enables the cancellation of a specific order line. In addition to summary details of the order header and requested picking notes, the status of the requested line is output.

Entries can be made in the following fields:

Fields:

Document Type

Enter the type of document to be printed.

- 1 - Acknowledgement.
- 2 - Proforma.
- 3 - Cancellation note.

Include Already Printed ?

If you want to include documents that have already been printed you can:

- 0 - No. No Reprint.
- 1 - Yes. Reprint.

Ranges

It is possible to enter the following criteria in ranges:

- Order Date.
- Delivery Date.

- Order Number.
- Customer.

Note: All of the range entries must be valid entries.

Picking And Despatching

A company will develop, over time, a set of procedures to control and produce the paper work for picking stock and confirming despatch. These procedures will take into account the formality of the organisation, the likelihood of a product being out of stock and the requirement for the opportunistic despatch of items which may only be available late in the pick despatch cycle.

The following general sequence of events is followed by the system.

For stockrooms:

- The stock is allocated to the order.
- The picking note is requested and printed. In addition, for stockrooms which are also defined as warehouses in the Warehousing application:
 - The location of the stock in the warehouse is identified and printed on a picking list.
 - The stock is confirmed picked.
- Despatch can be confirmed in one of two ways, interactively or in batch. The first method displays the requested despatch note on the screen and allows amendment, the second permits the entry of a batch of despatch notes for submission to the job queue. In both cases, after despatch confirmation, the stock is reduced and the numbered invoice request generated.

Picking Notes

12/STOEB

Once stock has been allocated to an order it is possible to request its despatch, either by printing out a picking note, or if the stockroom is a warehouse, by transferring the request to the Warehousing application. It is only necessary to print those despatches which have to be made immediately. This is controlled by printing notes to the nominated picking time fence.

Any stock which has been allocated, but is outside the time fence, will not normally be included on the picking notes.

If an order is to be satisfied from more than one stockroom, a picking note will be printed for each stockroom. This is to simplify the control of the documents at the depots.

All outstanding allocations inside the time fence, irrespective of the method and the timing of the allocation will be included on a picking note.

Note: Great care must be taken not to run this procedure for the same stockroom and at the same time as the print picking list procedure in the Warehousing application.

Request Picking Screen

The Request Picking Screen enables the selection of picking notes.

5-27 SA MW KS CL IM DM II STUD140 KB PET179S1			

Fields:

Time Fence

The default picking time fence is retrieved from the descriptions file - major type DNTF is displayed in the field. Enter the requested picking note time fence. This is expressed in days. It may be changed, for example, prior to holidays or week ends.

OR

For a range of orders

OR

A single order. This is used to print the despatch note for a customer for whom a manual pick list has been printed prior to the confirmation of despatch.

OR

For a range of product codes (styles), customers, division, customer classes, order types, product groups, order types, and order priorities.

Ship with Control

This field enables you to select the criteria for production of the pick note.

Consolidator

If the customer has been selected, this field will be validated against the customer DC. If you enter a consolidator range this will restrict the production of the pick note to that of the entered range of Consolidators only.

Customer DC

This is the delivery address of the customer flagged as a distribution centre for the pick note. If you enter a range of customer Dcs this will restrict the production of the pick note to that of the entered range of Customer DCs only.

The procedure may be run to print picking notes for all warehouses/stockrooms or a selected warehouse up to the picking note time fence or 'Lead Time'.

A summary picking list and detail picking list may be printed and sequenced, if required.

Note: If sequence by product is selected, pick notes will print with items sequenced in bin number 1 sequence. This may help to pick products in a logical sequence.

Press **Enter** to validate and submit the job to the job queue.

Picking Notes Reprint

13/STOEB

This function allows you to Reprint Picking notes.

The procedure is submitted to the batch queue.

The procedure may be run to reprint picking notes for all warehouses/stockrooms or a selected warehouse up to the picking note time fence or Lead Time.

OR

For a range of orders

OR

A single order. This is used to print the despatch note for a customer for whom a manual pick list has been printed prior to the confirmation of despatch.

OR

For a range of product codes (styles), customers, division, customer classes, order types, product groups, order types, and order priorities.

A summary picking list and detail picking list may be printed and sequenced, if required

Note: If sequence by product is selected then pick notes will print with items sequenced in bin number 1 sequence. This may help to pick products in a logical sequence.

Time Fence

The standard default is shown. Enter the requested picking note time fence. This is expressed in days. It may be changed, for example, prior to holidays or week ends.

Press **Enter** to validate and submit the job to the job queue.

Invoice/Credit Print

14/STOEB

This is a batch program that prepares and prints the Invoice and Credit Note documents for all transactions since the previous run. Enter the VAT date for invoices, then press **Enter**. If no date is entered then it defaults to the current date.

The procedure is submitted to the batch queue. The following actions are performed:

- For orders priced at time of despatch the invoice is priced using the prices and exchange rate applicable at the date of despatch. If the order is not complete the residual order is revalued using the despatch price.
- Invoice documents are generated.
- Credit notes are generated.
- Accounts Receivable is updated, if it is attached.
- A summary posting report is generated for Accounts Receivable update.
- If a summary or credit line has no price because one did not exist in the price list at the time the document was entered, pricing will be attempted. If this fails, the document will not be printed, the Ledgers will not be updated and an error will be written to the Invoice Not Priced report.

The following documents and reports are output:

- Invoices.
- Credit notes.
- Summary posting report (if Accounts Receivable is attached).
- Invoices not priced.

Note: When World Trade is attached, the VAT on invoices is recalculated and World Trade movements are generated.

Invoice/Credit Reprint

15/STOEB

This is a batch program that reprints the invoice and credit note documents. Enter the VAT date for invoices, then press **Enter**. If no date is entered then it defaults to the current date.

The procedure is submitted to the batch queue.

The following documents and reports are output:

- Invoices.
- Credit notes.
- Summary posting report (if Accounts Receivable is attached).
- Invoices not priced.

Press **F8** to validate and submit the job.

Consignment Notes

16/STOEB

This option enables the printing of consignment notes. These provide a formal document detailing the load contents according to consignment code specified within the load header (if Transport Planning is installed).

Fields:

Carrier Code

This is the code given to the organisation responsible for the transportation of the goods. A prompt is available.

Print Consignments

You have the option to print the consignment details.

1 - Yes. Print the documents.

2 - No. Do not print.

Press **Enter** to confirm your entries, then select **F8** to submit the job to batch.

Despatch Note Reprint

17/STOEB

This function allows you to reprint despatch notes.

The procedure is submitted to the batch queue.

The procedure may be run to reprint despatch notes for all warehouses/stockrooms or a selected warehouse up to the 'Lead Time'.

OR

For a range of orders

OR

A single order. This is used to print the despatch note for a customer for whom a manual pick list has been printed prior to the confirmation of despatch.

OR

For a range of product codes (styles), customers, division, customer classes, order types, product groups, order types, and order priorities.

A summary picking list and detail picking list may be printed and sequenced, if required.

Note: If sequence by product is selected, despatch notes will print with items sequenced in bin number 1 sequence. This may help to despatch products in a logical sequence.

Time Fence

The standard default is shown. Enter the requested despatch note time fence (lead time). This is expressed in days. It may be changed, for example, prior to holidays or week ends.

Press **F8** to validate and submit the job to the batch job queue.

Cancel Order By Due Date

21/STOEB

This option enables the selection of a due date, up to which all orders will be cancelled.

Fields:

Number Of Days Overdue

Enter the number of days that orders will be allowed to be overdue. Orders over the number of days stated overdue will be cancelled. Orders less than the stated number of days will not be cancelled.

Cancellation Code

Enter a valid cancellation code for the order. A prompt is available.

Press **Enter** to validate your entries, then press **F8** to submit the job to batch. This extracts the selected records.

Select Order Cancellation (**6/STOEB**) to cancel the order.

Cancel Order By Order

22/STOEB

This option enables the selection of an order number or customer number, by which all orders will be cancelled.

Fields:

Canc Code

Enter a cancellation code for the order.

Order Number

Enter an specific order number for the cancellation.

Customer Number

Enter a customer's number.

Press **Enter** to validate your entries, then press **F8** to submit the job to batch. This extracts the selected records.

Select Order Cancellation (**6/STOEB**) to cancel the order.

Cancel Order By Cancel Date

23/STOEB

This option enables the cancellation of orders by specifying a cancellation date.

Fields:

Number Of Days Cancel

This is the number of days specified after which orders will be cancelled. If the number of days for the order is less than the amount specified in this field it will not be cancelled.

Cancellation Code

Enter a valid cancellation code for the Order(s).

Press **Enter** to validate your entries, then press **F8** to submit the job to batch. This extracts the selected records.

Select Order Cancellation option (**6/STOEB**) to cancel the order.

Confirmation Of Despatch

24/STOEB

Following the entry of a batch, or number of 'batches' of despatches, a job number must be submitted to the batch queue. The processing performed for each despatch is identical to the processing carried out by the interactive confirmation.

- Stock is reduced.
- Allocated stock is reduced.
- The cost of the inventory movement is calculated.
- Inventory movements are written to the movement history file.
- The usage of the despatched items is increased.
- Last issued date for the despatched items is updated.
- The order is changed to reflect the quantity despatched.
- An invoice is generated in the system, including the invoice number.
- Customer account balance for allocated not despatched is decreased.
- Customer despatch notes are produced if control parameter set.

Note: If it is found that any of the picking notes are no longer eligible for confirmation because they have already been confirmed, an error report is produced.

Note: Any Despatches which contain batch or lot controlled items cannot be processed through batch confirmation. An audit will be produced, listing despatches rejected from this process

The job is submitted when **F8** is taken from the Confirm Despatch Batch Processing screen.

Cancel Picking Note

25/STOEB

This procedure enables a previously printed picking note to be cancelled. The stock which was allocated on the picking note remains allocated.

Once a picking note has been cancelled it cannot be confirmed as despatched. It is important that picking notes which are cancelled are either destroyed or defaced in such a way as to render their use as an authority to despatch impossible. If a picking note was raised for a stockroom which is defined to the Warehousing application as a warehouse, it may only be cancelled up to the time that it is selected for picking action and printed on a picking list by Warehousing.

Note: The option does not de-allocate the associated stock.

Warning: It is obviously important that a cancelled picking note is physically destroyed or defaced.

Note: A picking note raised against a depot defined to Warehousing can only be cancelled up to the point of selecting it for printing on a Warehousing picking list.
