## Chapter 6

### Utilities

## Authorisation Issues

Sales Order Processing Utilities provides assistance with set-up, housekeeping and database integrity. In general these procedures require exclusive use of the company or sometimes the whole application in order to run. It is therefore strongly recommended that the authority to run these procedures is restricted to perhaps two to three people who have responsibility for the whole system.

***Warning: Other jobs are already using the system.***

***Warning: Your request requires exclusive use of the system which is not available.***

A warning will be displayed if the utility option is selected and another user is signed on to the Sales Order Processing company. A similar message is displayed when exclusive use of the application is required but cannot be achieved. This might be caused by jobs which are finished but not de-allocated. The most likely cause of this situation would be the cancellation of jobs whilst active or on the job queue, or a system crash occurred.

This can be corrected by using the option Verify Allocated files on the Application Manager system.

# Recreate Customer Search Index Utility

## 1/STOEU

In order to help identify customers within the application an alpha search is provided. This search will operate on the words or part words of the customers' name. In addition, two extra fields from the customer record can be selected to be used as search arguments. If any of the criteria are changed or it is believed that the index has become corrupted, it is necessary to run this procedure so that all existing customers will have their new index entries created.

There are no selection criteria. Following your selection, the screen to confirm processing a batch job is displayed.

# Order And Invoice Archive Utility

## 2/STOEU

This procedure enables a reduction in the size of the Sales Order Processing database. The archive process has three stages.

- Purge order and invoice data from the live files and write them to a set of history files.
- Back up the history files to an off-line medium and clear the history files.
- Reorganise the following files:
  - OEP40.
  - OEP45.
  - OEP50.
  - OEP55.
  - OEP65.
  - OEP70
  - INP40
  - Order header.
  - Order address overrides.
  - Order charges.
  - Order lines.
  - Invoice header.
  - Invoice lines
  - Order/Invoice text.

The following criteria must be met in order that records are archived:

- The order must be complete or cancelled.
- The invoice must have been paid in Accounts Receivable.
- The processing date (of completion, cancellation or payment) must be prior to the nominated date.

A screen is displayed that requests that the target date is entered.

The default date is one year prior to the current date. This may be changed. Press **Enter** to validate the date and confirm the run.

## Functions:

### F11

Submit confirm the deletion.

Data is added to the following history files:

- OEP40H.
- OEP45H.
- OEP50H.
- OEP55H.
- OEP65H.
- OEP70H.
- INP40H.
- Order header.
- Order address overrides.
- Order charges.
- Order lines.
- Invoice header.
- Invoice lines.
- Order/Invoice text.

# Complete Orders

## 3/STOEU

This option operates by submitting a batch job to complete orders.

The standard batch processing screen is displayed.

Press **F8=Submit** to submit the batch job.  
Alternatively, press **F3/F12** to exit without submitting the job to batch.

## Build Mail Order Allocations

### 4/STOEU

This option operates by submitting a batch job to perform the request.

The standard batch processing screen is displayed.

Press **F8=Submit** to submit the batch job.  
Alternatively, press **F3/F12** to exit without submitting the job to batch.

# Install AFI Control

## 5/STOEU

It is strongly recommended that journal conditions are first set up as under test and that they are thoroughly proven before they are set to live and Advanced Financial Integrator (AFI) is active.

Until such time as AFI is activated, posting of sales invoices and credit notes to the General Ledger will continue to take place via the standard facilities of the Basic Financial Integrator. When AFI is set to active only from that point will postings to the General Ledger take place via AFI during each subsequent invoice or credit note run.

The steps required to be taken to activate AFI are as follows:

1 - AFI Maintenance.

Use the Maintain Journal Condition option to change the status of your journal conditions from inactive.

0 - Inactive.

1 - Under test.

2 - Live status.

This need not be done for all journal conditions - only those which you are ready to activate.

2 - SOP Utilities.

Use the Initiate Extract option to change the status of the AFI Link from BFI Mode to active using F8. At the same time check the validity of your consolidation settings on this display (i.e. Install SOP/AFI Link).

AFI will now be used to process sales invoices and credit notes to create General Ledger journals, according to your rules and definitions, from the point when your next invoice or credit run takes place.

Should the AFI determine that an extract or update will not be able to complete successfully, then a message is sent to the user giving details of the problem. After correction, the next invoice run will collect all outstanding data.

# AFI Test Invoice Extract

## 6/STOEU

This function is used to undertake a trial extract of data from Sales Order Processing and create a General Ledger journal. Note that no actual updating of data takes place, either within the source application or the General Ledger. It is purely a paper exercise to simulate the effect of creating the specified journals for the nominated company.

Up to three reports are generated:

- A list of the General Ledger postings generated.
- An exception report showing, for example, any balancing postings automatically created for an unbalanced journal.
- An error report, showing any error conditions encountered.

Select AFI Test Invoice Extract from within Utilities.

### Fields:

#### Source Company

Indicate the source company whose data is to be used for this trial extraction.

#### Include Only Invoices Not Already Extracted

Enter a 1 if, for the purposes of this trial, you want to use only data which has not been extracted in live operation mode by AFI.

Enter a 0 if you wish to specify a range of transaction numbers on which the trial is to be based.

#### Include Invoices From And To

This is only relevant if the previous response was 0. Specify here the range of invoices in the source application to be used in this trial. If you wish to use only a single transaction, say a single invoice, specify the same number in the From and To entries. A window facility is available to display transactions within the source application which can be used for this trial.

#### Type Of Journal Definition To Use

There are three valid options here:

- 1 - Use only journal definitions which are specified as being under test.
- 2 - Use only journal definitions which are specified as being live.
- 3 - Use both test and live journal definitions.

#### Consolidate Postings

Indicate here, by specifying a 1, whether you wish consolidation to take place on those postings defined as consolidatable. A 0 here specifies that no consolidation will take place, even though you may have postings defined as consolidatable.

Press **Enter** to validate the selection screen.

## Delete Suspended Order Audit Records

7/STOEU

This option deletes all the suspended order audit records created by the option from within Reports (21/STOEU).

Press **F8** to submit the job as a batch function.

# Sales Ledger Order Value Reconciliation Utility

## 11/ & 12/STOEU

As part of credit management it is necessary to value the immediate commitment in terms of the allocated stock to a customer. This is the value by which a customers credit will increase if no action is taken to stop it. This value is held, with the other financial balances for the customer, in Accounts Receivable.

This utility calculates the stock allocated to customers, both printed on picking notes and not yet printed, and compares the result with the total held on the customers Statement Account Balance, in Accounts Receivable. The Accounts Receivable balance is updated if any discrepancies have been found. It may be run in two modes. These are:

Report only (option 11/STOEU), or

Report and update (option 12/STOEU).

The discrepancies found are listed on a report.

Following your selection, the standard screen to confirm processing a batch job is displayed.

The report is titled O/S Order Value vs Allocated Orders and contains the following information:

- Statement Code & Description.
- Customer Balance.
- Customer Order Total.
- Variance between the balance and order total.

## Functions:

### F8

Submit the procedure to the job queue.

# Reconcile Goods Despatched Not Invoiced

## 13/ & 14/STOEU

The account summary balance update function takes account of any allocations and despatches, for hierarchical customers. During the allocation process the amount on order will increase, and during despatch the amount on order will decrease. The despatch process will also accumulate the goods despatched not invoiced value.

To ensure that the balances are maintained this option will generate a listing of discrepancies, between goods despatched without invoices compared to sales ledger invoice headers. The option offers two facilities:

- Report only (option 13/STOEU), or
- Report and update balances (option 14/STOEU)

Following your selection the standard Batch job processing window is displayed.

Press **F8** to confirm and submit the batch job.

The report is titled AR Goods Despatched Not Invoiced vs Invoice Header Value and contains the following information:

- Statement Code & Description
- Customer Balance
- Customer Invoice Total
- Variance between the balance and invoice total

### Functions:

#### **F8**

Submit the procedure to the job queue.

## Allocated, Picked And Forward Order

### 31/STOEU

The standard batch processing screen is displayed.

Press **F8** to submit the batch job. Alternatively, press **F3/F12** to exit without submitting the job to batch.
