Glossary

Glossary

Accruals

Goods that have been received, but not yet matched against a supplier's invoice.

Advice Note

A document received from the supplier giving details of goods delivered, and/or promised dates for goods to be received in the future.

Blanket Order

This is a type of scheduled order, but the commitment to quantities and dates is only provisional. It is processed in the same way as a 'normal' scheduled order within this application.

Confirm Flag

A user defined code to describe the current status of a purchase order line, e.g. C - confirmed, D - Delayed, Q - Queried. It is not validated and is used for selection purposes.

Delivery Instructions

A set of text with information regarding delivery of goods, which may be selected for printing on the purchase order.

Department

The department within the company which is responsible for the purchase order.

Expected Date

The date that the goods will realistically be expected to be delivered. Defaults to the Promise Date if not specified.

Goods Receipt Note

A document produced within the application which provides details of the goods received within the current session.

Invoice Match

The matching of an invoice received against goods previously delivered, for a specified supplier.

Item

The purchased item, usually represented by a unique code (at least for stock items).

Item Class

A code used to classify items within this application. These classes must be defined as valid parameters and are used for selection purposes.

Job Number

A user-defined code which may be associated with a whole order or order line.

Label

Details of goods received may be printed automatically on labels within this application. The label may then be attached to the goods for future identification.

Line Order

A non-scheduled order, i.e. a single delivery is expected for each order line.

Order Class

Specifies if the order is for stocked items, non-stocked items or services.

1-4 represent stock orders.

5-8 represent non-stock orders (where 6 is a service order).

Price Variance

This represents a difference in the price of goods between expected and actual. The normal comparisons are:

Standard to Order

Standard to Invoice

Order to Invoice

Promise Date

The date of delivery for the goods, as promised by the supplier.

Purchasing Officer

The person responsible for the purchasing control of particular items within this application.

Receiving Address

A set of addresses may be maintained which represent all possible receiving sites/locations within the company. These are selected when processing the order.

Request Date

The date on which the goods are requested, and required, for delivery.

Returns

Goods to be shipped back to the supplier, e.g. when damaged, over delivered, or of an incorrect specification.

Schedule Type

Designates the type of order:

S - Scheduled order.

B - Blanket Order.

Blank - Line order.

Scheduled Order

A firm commitment with a supplier for quantities of goods to be delivered on specific dates. Multiple deliveries are expected for each line.

Scrap Reason Code

Defines the reason for returning goods to a supplier, or scrapping goods against an order.

Shipping Order

The reference given by the Supplier to the shipment satisfying the purchase order.

SKU

Stock Keeping Unit. The SKU represents the lowest level of definition for a style whether that be a simple one dimension or four dimensional product. For example, a item with an assigned style with colours, fittings and sizes is a four dimensional product. Together, these dimensions constitute the SKU and differentiate it from other items.

Supplier

A code representing the vendor, which must be valid in the Supplier Master File.

Supplier Item Reference

The Supplier's catalogue code/item code for the purchased item.

User Authority

Values assigned to users in order to control the confirmation of both under and over delivery of goods and invoice pricing. This is used in Goods Receiving and Invoice Matching.
