Chapter 2

Processing

Day To Day Task Operations

The normal day-to-day processing in Purchase Management can be divided into three types of tasks:

- Creating and amending orders.
- Receiving goods.
- Matching invoices to goods received.

This section covers the procedures which control these processing functions.

Order Entry

1/STPMP

This procedure enables you to enter details of a purchase order.

Stock and non-stock orders are handled differently within this one function. Scheduled and blanket orders are also catered for.

A blanket order is a provisional scheduled order, i.e. one where the required dates and quantities are not considered a firm commitment, but provide a guideline for future requirements.

Note: This option also enables the creation of Item/Supplier profiles and the maintenance of Item Specifications.

Either of the following may be optionally requested:

- Print the order.
- Fax the order directly to the supplier.

If MRP is on-line and the Purchase Order Maintenance reason code is active, various activities trigger a flag for the next MRP run, including:

- Creating a purchase order.
- Changing the date in an existing purchase order.
- Changing the quantity in an existing purchase order.
- Cancelling an order line.

Order Entry Screen 1

Select the Order Entry option to display this screen.

This screen enables you to assign a supplier, order class (i.e. stocked or non-stocked), schedule type, stockroom, and delivery instructions to the order.

4-18	SA	MW	KS CL IM DM II KENB20A KB PET310S1

The following details may be entered:

Fields:

Order Number

The order number to be associated with this order. This is automatically allocated by the application if specified at company level.

Supplier

Enter the Supplier Code against which you wish to raise the order, or perform the name search to obtain the supplier. This supplier must be found in the Purchase Ledger.

Address Code

Enter the Address Code for this supplier. This must have been set up in the Purchase Ledger. A code of zeros causes the invoice address to be selected. A default Address Code is specified at company level.

Receiving Address Code

Enter the code for the address to which goods are to be sent. A default receiving Address Code is specified at company level.

Order Date

This defaults to today's date but may be changed.

Delivery Date

Mandatory entry. This is used as the default for the due date on each order line. It must not precede the order date.

Order Class

Mandatory entry. This specifies the type of goods ordered, and must be a valid order class parameter. This class also determines if the order is for stocked or non-stocked items: 1-4 Stock orders; 5-8 Non-stock (including 6-service orders).

Stock orders require an item record to be present for each item ordered. This must be an Inventory item record, or Item Specification (if Style Inventory Management is not installed).

P Officer No

Purchase Officer Number. Optionally, enter the code for the Purchasing Officer responsible for this order. If entered, it must be a valid code.

Schedule Type

Leave this blank if the order is a line order, i.e. one delivery is expected for the full order line quantity. If an entry is made, then the code must be valid, and indicates that the order is a type of schedule, i.e. multiple deliveries are expected for each line.

Warehouse

Enter the appropriate Inventory stockroom code in which the goods from this order are to be received.

D/y Instr Code

Delivery instruction code. Optionally, enter the delivery instructions code required to print on the order form.

Department/Shipping Code/Job Number

Three optional memo type fields, i.e. any data entered is displayed/printed as and when appropriate. There is an enquiry facility available to view orders by job number.

Disc %1/Disc %2

Optionally enter discounts which apply to the total order. Such details will be printed as part of the header details.

A list of valid values for the following entries may be prompted on:

- Supplier Codes (via standard name search).
- Receiving Addresses.
- Order Classifications.
- Purchasing Officers.
- Schedule types.
- Stockrooms.
- Delivery instructions codes.

Once all mandatory entries have been made, and validation has completed satisfactorily, the parameter descriptions are displayed for confirmation.

Payment Terms

The payment terms for the item.

Routing Code

The routing code for the item.

Freight Terms

The freight terms for the item.

Press **Enter** to display the appropriate Order Details screen (for stocked or non-stocked orders depending on the order class selected).

Functions:

F12

Re-displays the header screen for amendment.

F23

Import Details (See Order Entry - Import Details).

Order Line Entry Screen 1

This screen is displayed when you press **Enter** on the Order Details screen, where the order class you have entered on the Order Header is in the range 1 - 4 inclusively

This screen enables you to enter the purchase order line details for an order comprising stocked items only, i.e. where the order class entered on the Order Header is in the range 1 - 4 inclusively.

STUD140		KB	PET179S1

Fields:

Order Number

This is displayed from Order Entry Screen 1

Supplier

The first line of the supplier's name and address from the Purchase Ledger Supplier Master file.

Class

The description of the order class, entered on Order Entry Screen 1 from the Parameters file.

The following details may be entered:

Supp Product Ref

Optionally enter the suppliers reference for the item. If not entered, this defaults to the supplier item reference held on the Item/Supplier profile.

Product

This is Mandatory. Enter a valid item or use the item name search to select a valid item.

If the Style Inventory Management application is installed, valid item and item/stockroom records must exist. Otherwise, only a Purchase Management item specification record is required.

Quantity

The order quantity must be entered. This relates to the units of measure specified by the next entry.

UOM

Units of measure. If left blank, the quantity unit of measure is defaulted to the purchase unit of measure from the item record (if Style Inventory Management is installed), or the item specification record (otherwise).

If entered, and Style Inventory Management is installed, this code must be any one of the Purchase, Stocking or Issue units of measure set up on the item record.

If entered, and any other Inventory Management application is installed, this code must be either the Purchase or Stocking unit of measure set up on the Item Specification record.

Price

Leave blank to default the price to that specified on the Item/Supplier profile, or any current price structure which exists for the Item/Supplier. If entered, the price is compared to that on the Item/Supplier profile and if a difference is found a message is displayed explaining these options:

Accept the entered price for this order only.

Accept the entered price for this order, and update the Item/Supplier profile price to reflect the entered price, only if no current price structures exist.

Enter another price; or blank the price to use default.

UOM

Optionally, enter the code for the unit of measure in which the price is expressed. The same rules apply as for the quantity UOM.

If left blank, the quantity UOM code is used as a default. If the latter is blank, the Purchase UOM code is used.

SKU

This is an optional entry, which allows you to price the order line at SKU (stock keeping unit) level. The system will not allow you to enter a quantity for an SKU if the price is zero.

Full Text

Enter 1 to copy the Purchase Management text for the item into the Order line text. If left blank, the description from the Inventory item or item specification record is copied into the order line text.

VAT Code

Optionally, enter a valid General Ledger VAT code. If left blank, it is defaulted from the items or item specification record. This is used for memo purposes only.

Disc%

Optionally, enter up to two discounts to be applied to the price for this item. If the first discount field is left blank, then the discount held on the Item/Supplier profile is used as a default.

If the first discount is entered, this will be compared to that held on the Item/supplier profile. If there is a difference, then a message is displayed and the same options apply as for price differences.

Due Date

This may optionally be entered for non-scheduled orders only. (Scheduled order dates are catered for on a separate screen). If this is not entered, it defaults to the value from the header screen. It represents the date that this order line is due to be delivered.

Select

This field is headed by an asterix (*) on screen. A selection may be made against any existing line on the order:

- 1 - To amend the line details.
- 2 - To display the schedule line details screen (only for scheduled or blanket order).
- 3 - To display the line text screen.
- 4 - To link sales orders to this purchase order.
- 5 - To add additional cost/date line details.
- 6 - To update landed cost details.

If no Item/Supplier record is found, i.e. this item has not previously been ordered from this supplier, then a message is displayed suggesting that a record may be created using the **F22** key.

Care must be taken to check the Supplier's Item Reference, Price and Discount 1 are correct before adding this profile.
Press **Enter** to display the Style Matrix screen.

Style Matrix Screen

This screen is displayed when you press **Enter** on the Order Line Entry screen 1.

The screen allows the entry of quantities against the displayed colour and size options of the selected style. The quantities entered here must agree with the total quantity entered on Order Line Entry Screen 1.

If the order is a type of schedule, the Schedule Line Details screen is displayed after adding each line for entry of multiple expected deliveries against the line. After entering the schedule details, the application returns to this screen in anticipation of the next line.

PM082		ST - Style Test & QA Company		User: GBJBARW2	2/12/97
Order Line Entry				12:13:52

RED	10.00000	10.00000	10.00000
KHAKI	10.00000	10.00000	10.00000
Magenta	10.00000	10.00000	10.00000

12-20	SA	MW	KS	CL	IM	DM	II	STUD140	KB	PET179S1
-------	----	----	----	----	----	----	----	---------	----	----------

Completion of the order entry is achieved by using the **F7** or **F8** key.

Functions:

F7

Update the order and return to the header screen for the next order (this will assume the default completion options).

F8

Update the order and display the completion options screen for this order.

F11

Cancel this order and return to the header screen for this order number to be re-used.

F21

Display the item text screen.

F22

Create a new Item/Supplier Profile record.

Cost Code

Enter the General Ledger Account Code which you wish to associate with this order line. An order enquiry is available by this code, and it is also the account to which the goods value is posted in Invoice Matching.

Quantity/UOM

Quantity/Units of measure. The quantity must be entered together with the appropriate Unit of Measure code from the parameters file. Non-stock orders will be validated against the unit of measure codes off the Purchasing Parameters file. Stock orders will be validated against the Inventory Item Master file.

Price/UOM

Price/Units of measure. The price must be entered. The price UOM code must exist on the parameters file, and must belong to the same Group Unit of Measure as the quantity of unit of measure. If not entered, the price is assumed to be in the same units as the quantity.

VAT Code

Optional entry. If not entered, it defaults to the code set up for the supplier. The VAT Code is used for memo purposes only.

Disc%

Optionally enter up to two discounts to be applied to the price for this order line.

Due Date

May be optionally entered for non-scheduled orders. If this is not entered, it defaults to the value from the Style Matrix Screen. It represents the date that this order line is due to be delivered. For scheduled orders, the delivery dates are entered on a separate screen.

Select

This field is headed by an asterisk (*) on screen. A selection may be made against any existing line on the order:

- 1 - To amend the line details
- 2 - To display the line text screen; (scheduled and blanket orders only)
- 3 - To display the line text screen
- 4 - To link sales orders to this purchase order
- 5 - To add additional cost/date details
- 6 - To update landed costs details

If the order is a type of schedule then, when you press **Enter** after adding each line, the Schedule Line Details screen is displayed for entry of multiple expected deliveries against the line.

After entering the schedule details, the application returns to this screen in anticipation of the next line. Completion of the entry of the order is achieved by using the **F7=Update & Next Order** or **F8=Update And Options** key.

Functions:

F7

Update the order and return to header screen for the next order (this will take the defaults for the order completion options).

F8

Update the order and display the completion options screen for this order.

F11

Cancel this order and return to the header screen for this order number to be re-used.

Order Line Entry Screen 3

This screen is displayed when you press **Enter** after adding a scheduled order line on Order Line Entry screen 2.

The screen enables you to schedule the order line quantity, entered on Order Line Entry Screen 2. The quantity is split into multiple deliveries, each with a required date.

Note: The full outstanding quantity for the order line need not be scheduled.

Note: The screen is only used where the order is a type of schedule.

The following information is displayed:

Fields:

Order No/Supplier/Class

Order header details from header screen.

Line/Item Number/Nominal Code/Qty/Supplier Item Ref/ UOM

Order line details from Order Line Entry Screen 2.

Qty Scheduled

A running total of the quantity scheduled.

The following details may be entered:

Ref

If you wish to amend a schedule, enter the Reference Number for the scheduled line.

Request Date

Enter the date that the delivery is required. This must be entered.

Quantity

The quantity required for this delivery.

Promise Date

Enter the date delivery is promised by the supplier (if any). If this is not entered, this date defaults to the Request Date.

Confirm Flag

Enter a code here to describe the status of the line, e.g. C -confirmed, D - delayed, Q - queried. This flag is used as a selection criterion for the Order Confirmation report.

Expected Date

Enter the date that the goods are expected realistically to be delivered. If not entered, this defaults to the Promise date.

The following fields are available for entry only if a Ship Code has been entered on the header screen. These are used for memo purposes only.

Ship date

Enter the date that the goods will be shipped, as promised by the supplier.

Advice Note

Enter the advice note number for the shipment, as per supplier.

Container No.

The container no. that contains this order, if known.

The application checks that the total quantity scheduled does not exceed the outstanding quantity.

Once the scheduled deliveries have been entered, and update is selected, these details are written to the Order Lines file. The Order Line screen 2 is displayed once the update is complete. This is to allow additional lines to be added to the order if required.

Internal Text Window (Option 3)

 This window is displayed when you put a 3 against any order line on the Order Line Entry screen, or select **F21=Text** on the Style Matrix screen.

The screen enables you to maintain order line text, which is created when an order line is added to the order and will be printed on the purchase order.

07-46	SA	MM	KS IM II KENB20A PET178S2

Fields:

Order Number

From the header screen.

Date

The order date from the header screen.

Class

The order class and description from the header screen.

A prompt on valid fax numbers for the supplier is available.

The following details may be entered:

Do You Wish To Enter Further Orders?

0 - No. Returns to the Processing option.

1 - Yes. Returns to the Header screen after this screen has been processed.

Do You Wish To Print The Order?

- 0 - To neither print nor fax the order.
- 1 - To print this order the next time the Print Orders option is taken.
- 2 - To print this order immediately.
- 3 - To create a facsimile sending it directly to the supplier.

Do You Wish To Use External Supplier Text On This Order?

- 0 - No. Exclude this text.
- 1 - Yes. Print the text set up for orders to the supplier.

Do You Wish To Add Text For Printing On The Order?

- 0 - No. Use the standard text set-up for orders to this supplier.
- 1 - Yes. Enables text, unique to this order, to be added to the standard supplier text (via a screen), for printing on the order.

Do You Wish To Add Text For Display Within The Company?

- 0 - Otherwise.
- 1 - To enable addition of internal text to the order. This is not printed on the order, but is available on outputs within the company.

On pressing **Enter** the selected options are processed.

The selections made are used as the defaults for subsequent orders in this session of order entry.

Note: If immediate print, or fax, is selected then the order must still be released in the normal way. The order print and pre-print options will not apply if either of these options is selected.

Note: The option to send a facsimile of the order to the supplier is dependant on the company having the necessary software and hardware installed to handle this computerised fax link.

Functions:

F11

Cancel the whole order, ignoring any options selected on the screen, and return to the Header screen for this order number to be re-used.

F12

Display Import Details Maintenance Screen.

Note: If Immediate Print is selected, the report is printed. If Order Facsimile is selected, this is faxed directly to the supplier. It will appear in the same format as the printed order.

Order Amendment

1... **2/STPMP**

This procedure enables you to amend existing purchase orders.

Order header, order lines, import details, text and schedule details may all be amended. All changes are logged and can be printed using the Order Amendment Audit (from within Purchase Management Report). The order may also be reprinted. A reservations enquiry is available from order amend which highlights sales orders reserved against selected purchase orders.

Order Amendment Selection Screen

Select the Order Amendment option to display this screen.

The screen enables you to select the purchase order to be amended.

```

PM001          ST - JBA System Test Company      USER GBJBARW2    27/10/95

Fields:

Order No.

From Order Amendment Screen 1.

Order Date/Warehouse/P. Officer/Stockroom/Supplier

From the order header file (these cannot be amended).

The following details may be entered.

Supplier Address Code

Enter a new Address Code which is valid for the supplier, i.e. which is found on the Supplier Master file.

Receiving Address

Enter a code for the address to which the goods are to be sent.

Delivery Instrctn

Enter a code to identify the delivery instructions to be printed on the order.

Supplier Reference

Enter the supplier's order or acknowledgement number for this order.

Amend Lines

You can enter the following:

0 - If not required.

1 - To enable amendment of order lines, e.g. quantities, prices and text.

Tip: The following five fields are only displayed for entry when the order is not a schedule or blanket order.

Amend Delivery Dates

0 - If not required.

1 - To enable amendment of Promise and Expected Dates, and Confirmation Flag Values, for individual order lines.

Confirm Flag

Enter a code here to describe the status of all lines on this order, e.g. C - confirmed, D - delayed, Q - queried. This code is a selection criterion on the Order Confirmation report.

Promise Date

Enter a valid date, to apply to all lines on this order. This date represents the date on which the supplier will deliver all items on this order.

Expect Date

Enter a valid date to apply to all codes on this order. This represents the date that is felt to be realistic for delivery of this order.

Ship Date

Enter a valid date to apply to all lines on this order. This is the date that the supplier has reported as being the date of despatch for the whole order.

Reprint Order

0 - To neither print nor fax the order.

1 - To print the next time the Print Orders option is taken.

Ship Code/Job Number/Department

Optionally, enter these for memo purposes only, i.e. to be displayed/printed where appropriate. An order enquiry by job number is also available.

If amend delivery dates is selected, a Delivery Dates amendment screen is displayed. If Amend Lines is selected, then the appropriate Order Line Details screen is displayed, (depending on whether the order is for stocked or non-stocked items). If both are selected, the screens are displayed sequentially. All other entries are updated immediately, once validation is complete.

Functions:

F21

Display Internal Text screen for maintenance of text which is to be displayed, but not printed on the order.

F22

Display External Text screen for maintenance of text to be printed on the order.

F23

Import Details.

Amend Delivery Dates Screen (Option 1)

This screen is displayed if Amend delivery Dates option 1 is selected on the Order Header screen. Order line text can also be maintained, using the appropriate function key (**F21=Internal Text** or **F22=External Text**).

This screen enables dates to be amended for non-scheduled orders.
The following information is displayed:

Fields:

Order Number

From select screen.

Supplier/Order Date

From Order header.

Due Date/Qty/Supplier Ref No/UOM/Item

All from selected order line.

Request Date

Due date from order line.

The following details may be entered:

- 1 - To enable the following fields to be amended.
- 2 - To maintain order line text.

Expect Date

Enter date that, realistically, the order line will be delivered.

Advice Note

Enter the supplier's advice note reference.

Promise Date

Enter the date that the supplier promises for delivery of the line.

Confirm Flag

Enter a code to describe the status of the line.

Ship Date

Enter the date that the supplier is to ship the line, i.e. despatch it.

Enter 1 to display date details at the foot of the screen for amendments to be made. Press **Enter** to immediately update these amendments on the Transaction file.

Stock Order Details Amendment Screen 4

This screen is displayed when you press **Enter** and the order details entered on the Order Amendment screen are in the range 1 - 4.

The screen enables you to add or maintain the purchase order line details for an order comprising stocked items only, i.e. where the order class is in the range 1- 4.

The following information is displayed:

Fields:

Order Number

From Order Amendment Screen 3.

Supplier

The first line of the supplier's name and address from the Purchase Ledger Supplier Master file.

Class

Description of order class, entered on Order Amendment Screen 3 from the Parameters file.

A list of the existing lines on the order is displayed. To amend an existing line, enter a 1 against the required line. Alternatively, you may enter new lines by entering the details at the base of the screen.

The following details may be entered:

Supplier Product Ref

Optionally enter the supplier's reference for the item. If not entered, this defaults to the supplier item number held on the Item/Supplier profile.

Product

Mandatory. Enter a valid item. Use the item name search to select a valid item. If the Style Inventory Management application is installed, valid items and item/stockroom records must exist. Otherwise, only a Purchase Management item specification record is required.

Quantity

The order quantity must be entered. This quantity is expressed in the units of measure specified by the next entry.

UOM

If left blank, the quantity unit of measure is defaulted to the purchase unit of measure from the item record (if Style Inventory is installed), or the item specification record (otherwise).

If entered, and Style Inventory Management is installed, this code must be any one of the Purchase, Stocking or Issue units of measure set up on the item record.

If entered, and any other Inventory application is installed, this code must be either the Purchase or Stocking unit of measure set up on the item specification record.

Price

Leave blank to default the price to that specified on the Item/Supplier profile, or any current price structure which exists for the item/supplier. If entered, the price is compared to that on the Item/Supplier profile and if a difference is found a message is displayed explaining these options:

- Accept the entered price for this order only.
- Accept the entered price for this order, and update the Item/Supplier profile price to reflect the entered price, only if no current price structure exists.
- Enter another price

Or

- Blank the price to use default.

UOM

Optionally, enter the code for the unit of measure to which the price applies. The same rules apply as for the quantity UOM. If left blank, the quantity UOM code is used as a default. If the latter is blank, the Purchase UOM code is used.

In the case of on line amendment where the quantity is changed but the price remains the same, the price will be set to that specified on any current price structure for the item/supplier.

Full Text

Enter 1 to copy the Purchase Management text for the item into the Order line text. If left blank, the descriptions from the Inventory item or item specification record is copied into the order line text.

VAT code

Optionally, enter a valid General Ledger VAT code. If left blank, it is defaulted from the Inventory item or item specification record. This is used for memo purposes only.

Disc%

Optionally, enter up to two discounts to be applied to the price for this item. If the first discount field is left blank, then the discount held on the Item/Supplier profile is used as a default.

If the first discount is entered, then it will be compared to that held on the Item/supplier profile. If there is a difference a message is displayed and the same options apply as for price differences.

Due Date

This may be entered optionally for non-scheduled orders only. (Scheduled order dates are catered for on a separate screen). If this is not entered, it defaults to the value from Order Amendment Screen 3. It represents the date that this order line is due to be delivered.

Nom Code

Optional. This is the nominal code to be associated with this order line. It defaults to the General Ledger Account Code held on the Inventory Item record.

Job Number/ Department

Optional. These fields default to values from Order Amendment Screen 3.

Select

This field is headed by an asterix (*) on screen.

A selection may be made against any existing line on the order:

- 1 - To amend the line details.
- 2 - To display the schedule line details screen.
- 3 - To display the line text screen.
- 4 - To link sales orders to this purchase order.
- 5 - To add additional cost/date details.
- 6 - To enter landed cost details.

If no Item/Supplier record is found, i.e. this item has not previously been ordered from this supplier, a message is displayed suggesting that the record can be created using **F22**.

Care must be taken to check the Supplier's Item Reference, Price and Discount 1 are correct before adding this profile.

If the order is a type of schedule then, after adding each line, the Schedule Line Details screen is displayed for entry of multiple expected deliveries against the line. After entering the schedule details, the application returns to this screen in anticipation of the next line.

Completion of the order amendment is achieved by using **F8**.

Functions:

F8

Update order and return to Select screen.

F11

Cancel this order and return to Header screen for the Select screen.

F12

Return to Order Amendment Screen 3.

F21

Display the item text screen.

F22

Create a new Item/Supplier Profile record.

Enter the General Ledger Account Code which you wish to associate with this order line. An order enquiry is available by this code and it is also the account to which the goods value is posted in Invoice Matching.

Quantity/UOM

The quantity must be entered, together with the appropriate Unit of Measure Code from the Purchasing parameters file.

Price/UOM

The price must be entered. The price UOM code must exist on the parameters file, and must belong to the same Group Unit of Measure as the quantity of unit of measure. If not entered, the price is assumed to be in the same units as the quantity.

VAT Code

Optional entry. If it is not entered, it defaults to the code set up for the supplier. The VAT Code is used for memo purposes only.

Disc%

Optionally enter up to two discounts to be applied to the price for this order line.

Due Date

May be optionally entered for non-scheduled orders. If this is not entered, it defaults to the value from Order Amendment Screen 4. It represents the date that this order line is due to be delivered. For scheduled orders, the delivery dates are entered on a separate screen.

Job Number/ Department

Optional. These default to the values from Order Amendment Screen 4.

Select

This field is headed by an asterix (*) on the screen. A selection may be made against any existing line on the order:

- 1 - To amend the line details
- 2 - To display the schedule line details screen (only scheduled or blanket orders).
- 3 - To display the line text screen.
- 4 - To link sales orders to this purchase order.
- 5 - To add additional cost/date details.
- 6 - To enter landed cost details.

If the order is a type of schedule then, after adding each line or amending the quantity, the Schedule Line Details screen is displayed for entry of multiple expected deliveries against the line.

After entering the schedule details, the application returns to this screen in anticipation of the next line. Completion of the order amendment is achieved by using the **F8** key.

Scheduled Order Amendment Screen

This screen is displayed when you press **Enter** after adding or amending a scheduled order line on Order Amend screen

This screen enables you to schedule the order line quantity, maintained on Order Amendment Screen. The quantity is split into multiple deliveries, each with a required date.

Note: The full outstanding quantity for the order line need not be scheduled.

This screen is only used where the order is a type of schedule.

				Container.??	____	
F4=Prompt F8=Update completed						
19-16		SF	MM	KS	IM	II KENB20A PET178S2

Fields:

Order No/Supplier/Class

The order header details from header screen.

Supp Product Ref

Order line details from Order Amendment Screen.

Currency

Order line details from Order Amendment Screen.

Product

Order line details from Order Amendment Screen.

Line

Order line details from Order Amendment Screen.

UOM

Order line details from Order Amendment Screen.

Qty

Quantity Scheduled. A running total of the quantity scheduled.

The following information may be entered:

Ref

If you wish to amend a schedule, enter the Reference Number for the scheduled line to be amended.

Request Date

Enter the date that the delivery is required. This must be entered.

Quantity

The quantity required for this delivery.

Promise Date

Enter the date delivery is promised by the supplier (if any). If this not entered, this date defaults to the Request date.

Confirm Flag

Enter a code here to describe the status of the line, e.g. C - confirmed, D - delayed, Q - queried. This flag is used as a selection criterion for the Order Confirmation report.

Expected Date

Enter the date that the goods are expected realistically to be delivered. If this is not entered, it defaults to the Promise Date.

The following fields are available for entry only if a ship code has been entered on the header screen. These are used for memo purposes only.

Ship Date

Enter the date that the goods will be shipped, as promised by the supplier.

Advice Note

Enter the advice note number for the shipment, as per supplier.

The application checks that the total quantity scheduled does not exceed the outstanding quantity.

Once the scheduled deliveries have been entered, and update is selected, these details are written to the transaction file. The previous order line screen is displayed once the update is complete.

Supplier Window (Option 3)

This is displayed when 3 is entered against a line in Order Amendment Screen.

The screen is used to maintain order line text, which is created when an order line is added to the order and will be printed on the purchase order.

Supplier

Enter the Supplier Code and the first line of the name and address.

Order

Order line.

Line

Order line number.

Any text found for this order line is displayed. Up to 99 lines of text, each of up to 45 characters, may be maintained for each order line.

Position To

Enter the line number where the display should start.

Insert/After

Enter the number of lines of text to be inserted after the entered line number.

Delete/From

Enter the number of lines of text to be deleted from the entered line number.

Press **Enter** to write the order line text to the text file.

Goods Receiving

3/STPMP

This procedure enables you to record the receipt of goods. The area of goods receipt can be specified.

The application expects the input of an order number, an advice note number (the supplier's despatch reference) and a goods receipt note (GRN) number. However, the GRN number can be automatically generated. If the order number is not known then all outstanding orders for a container, supplier or item may be displayed and the appropriate order selected.

Lot and Batch controlled items are catered for, by the recording of receipts at this level of detail, if required.

The entry of receipts creates the necessary data for invoice matching, and the update of Inventory Management.

If a receipt is input which exceeds, or is less than, the quantity ordered, then the user's authority values are checked before the receipt is accepted.

A report of all receipts is augmented and may be printed via the Receipts and Returns or Daily Receipts and Returns Audit options within Reports.

Note: Orders cannot be received until they have been released via the New Orders Report.

If required, a specified number of labels may be printed for each order line received. These are output to the printer queue immediately.

Goods Receiving Screen

Select the Goods Receiving option to display this screen.

This screen enables you to select the Receipt Point (Goods Inwards, Inspection or Stores), and Receipt Date, for the goods to be confirmed as received. The Receipt Point is defaulted to the normal Receipt Point specified in the Purchase Management Company Profile. The Receipt Date is defaulted to today's date.

PM010	ST - JBA System Test Company	USER GBJBARW2	27/10/95

F3=Exit F4=Prompt F12=Previous			
05-16	SA	MW	KS IM II KENB20A PET178S2

Fields:

Order No

Enter the order number against which the receipt was made, if known.

OR

Product

Enter a valid product code and press Enter to display all outstanding orders for this Product. An order may be selected from this list.

OR

Container

Enter a valid container number and press Enter to display all outstanding orders. The prompt key may be used. An order may be selected from this list.

OR

Supplier

Enter a valid Supplier Code and press Enter to display all outstanding orders for this supplier. An order may be selected from this list.

Advice Note

Enter the advice note number from the supplier's despatch document. This is mandatory.

GRN Number

Enter a GRN Number for this receipt. This must not have been previously allocated to a different order. This is only displayed for entry if GRN numbers are not automatically generated, as designated by the company profile.

GRN Continued

This is displayed for entry to enable subsequent orders to be added to the same GRN.

0 - To create a new GRN for this receipt.

1 - Add order to GRN.

Rec't Whse

Receipt Warehouse Optional.

The receipt of this purchase order may be into any valid warehouse. All items on purchase order are validated to confirm they are stocked in this warehouse.

Mode of Transport

If World Trade is attached a mode of transport must be entered. Maintained on the Descriptions file, as type MODE.

Press **Enter**, the appropriate Order Details screen is displayed (depending whether the order is a type of schedule or not).

Goods Receiving Non Scheduled Order Details Screen

This screen is displayed when you press **Enter** after making entries on the Goods Receiving Inspection Receipt screen.

This screen enables you to confirm selected lines on a non-scheduled order as received or partially received. Order lines can also be completed if the received quantity is less, or more, than the order quantity. In these cases, the users authority values are checked to ensure that he/she is allowed to process the value of the discrepancy.

Tip: See Scheduled Order details for screen details.

Fields:

Order Number/Advice Note/GRN Number

From Inspection Receipt Screen.

Order Class

The code and description of the order class assigned to the order.

Stockroom

The code and description of the stockroom into which these goods are to be booked.

For each outstanding order line, the following is displayed:

Ref

Computer-generated reference to enable partial/over receipt of an order line by entering the details at the base of the screen. The reference relates to the number of the line in the displayed list.

Lne

Order line number.

Due Date

The date on which delivery of this order line is due, i.e. required.

UOM

The code describing the Stock Unit of Measure for the item ordered (stock orders), or the Order Unit of Measure (non-stock orders).

Order Quantity

The original order quantity for this order line.

Product

The item ordered.

Supplier Item Ref

The suppliers reference for the item ordered.

Below each line, the first line of Order Line text is displayed. Against each line, enter:

- 1 - To display Order Line text for this line.
- 2 - To receive the Order Line in full.
- 3 - To update Landed Costs.

Alternatively, you may enter details at the base of the screen, as follows:

Ref

Enter the reference number corresponding to an order line to be partially received, or over-received.

Quantity

Enter the receipt quantity. This may be expressed in the units of measure in the body of the screen, or any other unit of measure detailed on the Inventory item record of item specification for stock orders, or price unit of measure for non-stock orders.

UOM

Optional. If not entered, the unit of measure displayed on the screen is assumed. If it is entered, it must be valid as explained above.

Complete

If this is a partial receipt, enter 1 to complete the line (i.e. the remaining quantity will not be received). Enter 0 if the remaining quantity is to be left outstanding.

Receipt Warehouse

The default receiving warehouse code is displayed but may be amended if necessary.

Container

The number of the container associated with this order. This is usually defaulted from the container update routine.

Amend Landed Costs

- 0 - No amendment.
- 1 - Allows amendment of landed cost details.

No Labels

This is only displayed for entry if the Company Profile is set up to enable labels to print. If so, enter the number of labels to be printed for this line. It defaults to printing one label if no number is entered. Labels are printed immediately.

Int. Trace

For batch controlled items where the quantity entered relates to a single batch, enter the batch number here. This is an optional field for non-batch controlled items.

Ext. Trace

This is an optional field. It may be used to enter a reference number related to this specific delivery, if required.

Expiry Date

Optional. Enter the date on which the shelf life for this item will expire.

Several means of receiving goods are available:

Full Order Receipt

This is when received quantities agree with the whole order detail. This is achieved by using F8. If internal or external references, number of labels to print or expiry dates are required, then these should be entered at the foot of the screen prior to using F8. The values entered will then apply to all lines. If different values are required for each line, then each line must be received individually.

Selected Order Lines(S) Receipt

This is when full order line quantities are received for one or more, but not all, order lines. This is achieved by entering 2 against the selected line(s). Select as many order lines for receipt as required, using Page-up and Page-down keys, prior to pressing Enter.

If internal or external references, number of labels or expiry date are required, then these should be entered at the foot of the screen prior to pressing **Enter**. Values entered will apply to all order lines selected for receipt.

If different values are required for each line, then each line must be received individually.

Partial Line Receipt

This is when the full order line quantity is not received in one delivery. This is achieved by entering the reference number for the line at the foot of the screen, together with quantity, UOM, and complete fields. On pressing Enter the partial receipt is accepted.

However, if an attempt is made to close the order, that is. complete is set to 1, then the application will check the users authority values prior to accepting.

Note: If the value of the written off goods in this partial receipt exceeds the user's maximum allowable value or if the value of the written off goods expressed as a percentage of the total order line value exceeds the user's maximum allowable percentage, then a message will be displayed at the foot of the screen and the partial line receipt will not be accepted as a complete delivery. There is no override to this condition.

Over Receipt

This is when a quantity greater than that ordered is received. This may be recorded by entering the same details as for a partial receipt, except that 1 for complete should not be entered. The application will make the same checks for user authority as for the Partial Line receipt, except that value and percentage will be calculated using the excess quantity received rather than the written off quantity.

If the Style Inventory Management application is installed, and receipt to store is specified, the following updates will occur:

- Stock balances for on-order will be decremented, and physical stock incremented

- Stock movement records will be written to audit the receipt
- Actual costing data will be updated (i.e. latest, average and FIFO)

Note: Warehousing - If the Style Warehousing application is installed and the receipt is into a store defined to it, then an additional screen is displayed automatically for entry of a packaging type code, and expiry date.

Functions:

F8

Confirm full order receipt, and return to Inspection Receipt Screen.

F12

Display Inspection Receipt Screen, (no update).

F21

Display Internal Order Text screen.

The required number of labels are output immediately to the printer queue. Details printed are:

- GRN Number.
- Date Received.
- Supplier Code.
- Advice Note Number.
- Supplier Name.
- Internal Trace Reference.
- Supplier Item Reference.
- Item Number.
- Quantity Received.
- Pack Type Code (if Warehousing is installed).
- Container Number.

Press **Enter** to display the Receipt Into Stores Screen.

Goods Receiving Scheduled Orders details Screen

This screen is displayed when you press **Enter** on the Goods Receiving Inspection Receipt screen.

The screen is used to confirm lines on a scheduled order as received or partially received. This facility is similar to the one described previously for non-scheduled orders. The differences are highlighted in this section.

Fields:

Order Number/Advice Note/GRN No

From Inspection Receipt Screen.

Rec't Whse

Receipt Warehouse. The code and description of the stockroom/warehouse into which these goods are to be booked.

Order Class

The code and description of the order class assigned to the order.

For each outstanding order line the following is displayed:

Ref

Application-generated reference to enable partial/over receipt of an order line by entering the details at the base of the screen. The reference relates to the number of the line in the displayed list.

Lne

Order line number.

O/S Qty

Quantity outstanding.

UOM

The code describing the Stock Unit of Measure for the item ordered (stock orders), or the Order Unit of Measure (non-stock orders). All quantities held on file in purchasing are held as the issue units of measure for the item. These are then converted to update the stockroom balances to the issue units of the stockroom.

Order Qty

The original order quantity for this order line.

Product

The item ordered.

Text

The supplier's reference for the item ordered.

Below each line, the first line of Order Line text is displayed. Against each line, enter:

- 1 - Text. Displays Order Line text for the line selected.
- 2 - Receive. Receive quantities by entering the Order Line number and quantity at the foot of the screen.
- 3 - Receive/Landed Costs. Updates landed costs.
- 4 - Reservations. Displays reserved quantities held against purchase orders received into stock.
- 9 - Receive/Matrix. Displays a quantity matrix detailing the outstanding quantities at various levels of colour/size, colour/size/fit, etc. The information is displayed as for a non-scheduled order, except:
 - Scheduled Order is displayed below the stockroom.
 - Only deliveries scheduled for delivery within the time fence number of days are displayed and eligible for receipt. This time fence factor is maintained on the Company Profile.

Due

The date on which delivery of this order line is due, that is, required.

Whs

The warehouse location selected.

Alternatively, you may enter details at the base of the screen, as follows:

Ref

Enter the reference number corresponding to an order line to be partially received, or over-received.

Using a reference number to select a line will enable amendments to the style/colour/fit quantities provided that the total quantity matches that entered in the Order Quantity field.

No style/colour/fit quantity can exceed its own outstanding quantity.

Quantity

Enter the receipt quantity. This may be expressed in the units of measure in the body of the screen, or any other unit of measure detailed on the Inventory item record of item specification for stock orders, or price unit of measure for non-stock orders.

UOM

Optional. If not entered, the unit of measure displayed on the screen is assumed. If it is entered, it must be valid as explained above.

Amend Landed Costs

0 - No amendment.

1 - Allows amendment of landed cost details.

Container

The number of the container associated with this order. This is usually defaulted from the container update routine.

Complete.

0 - No.

1 - Yes.

A line cannot be flagged as complete if there is a reserved quantity held against the purchase order.

Receipt Whse

The default receiving warehouse code is displayed.

No Labels

This is only displayed for entry if the Company Profile is set up to enable labels to print. If so, enter the number of labels to be printed for this line. It defaults to printing one label if no number is entered. Labels are printed immediately.

Int. Trace

For batch controlled items where the quantity entered relates to a single batch, enter the batch number here. This is an optional field for non-batch controlled items.

Ext. Trace

This is an optional field. It may be used to enter a reference number related to this specific delivery, if required.

Expiry Date

Optional. Enter the date on which the shelf life for this item will expire.

Tip: Several means of receiving goods are available:

Full Order Receipt

This is when received quantities agree with the whole order detail. This is achieved by using the **F8** key. If internal or external references, number of labels to print or expiry dates are required, then these should be entered at the foot of the screen

prior to using **F8**. The values entered will then apply to all lines. If different values are required for each line, then each line must be received individually.

Selected Order Lines(S) Receipt

This is when full order line quantities are received for one or more, but not all, order lines. This is achieved by entering 2 against the selected line(s). Select as many order lines for receipt as required, using Page-up and Page-down keys, prior to pressing **Enter**.

If internal or external references, number of labels or expiry date are required, then these should be entered at the foot of the screen prior to pressing **Enter**. Values entered will apply to all order lines selected for receipt.

If different values are required for each line, then each line must be received individually.

Partial Line Receipt

This is when the full order line quantity is not received in one delivery. This is achieved by entering the reference number for the line at the foot of the screen, together with quantity, UOM, and complete fields. On pressing **Enter** the partial receipt is accepted.

However, if an attempt is made to close the order, that is. complete is set to 1, then the application will check the users authority values prior to accepting.

Note: If the value of the written off goods in this partial receipt exceeds the user's maximum allowable value or if the value of the written off goods expressed as a percentage of the total order line value exceeds the users maximum allowable percentage, then a message will be displayed at the foot of the screen and the partial line receipt will not be accepted as a complete delivery. There is no override to this condition.

Over Receipt

This is when a quantity greater than that ordered is received. This may be recorded by entering the same details as for a partial receipt, except that 1 for complete should not be entered. The application will make the same checks for user authority as for the Partial Line receipt, except that value and percentage will be calculated using the excess quantity received rather than the written off quantity. The excess quantity is then deducted from the next scheduled delivery.

If the Style Inventory Management application is installed, and receipt to store is specified, the following updates will occur:

- Stock balances for 'on-order' will be decremented, and 'physical' stock incremented

- Stock movement records will be written to audit the receipt
- Actual costing data will be updated (i.e. latest, average and FIFO)

Note: Warehousing - If the Style Warehousing application is installed and the receipt is into a store defined to it, then an additional screen is displayed automatically for entry of a packaging type code, and expiry date (for consumables).

Functions:

F8

Confirm whole order receipt, and return to Goods Receiving Non Scheduled Order Details Screen.

F12

Display Goods Receiving Non Scheduled Order Details Screen, (no update).

F21

Display Internal Order Text screen.

The required number of labels are output immediately to the printer queue. Details printed are:

- GRN Number.
- Date Received.
- Supplier Code.
- Advice Note Number.
- Supplier Name.
- Internal Trace Reference.
- Supplier Item Reference.
- Item Number.
- Quantity Received.
- Pack Type Code (if Warehousing is installed).
- Container Number.

Press **Enter** to display the Goods Receiving Order Line Text Screen.

Goods Receiving Order Line Text Screen

This screen is accessed when you put a 1 against the required Order Line.

This screen enables you to display and optionally maintain order line text at receipt time. See the Order Entry section.

Fields:

Supplier

From the Order Header.

Supplier Name / Order/Line

From the Receipt Into Stores Screen.

Existing order line text details, created originally in Order Entry, are displayed. Up to 99 lines of order line text, each of up to 45 characters may be entered.

Position To

Enter line number that display is to start at.

Insert/After

Enter the number of lines to be inserted after the entered line number.

Delete/From

Enter the number of lines to be deleted starting from the entered line number.

Press **Enter**, the Order Line Text details are then written to the Text File.

Goods Receiving Internal Order Text Screen (F21)

This screen is displayed when you select
F21=Internal text from the Goods Receiving
Details screen.

This screen enables you to maintain Order specific text to be used for internal output only (it does not appear on purchase order prints). The supplier/order number as on the Goods Receiving Order Line Text Screen, and any existing internal order text, are displayed. Up to 99 lines of text, each of up to 45 characters, may be maintained.

Fields:

Position To

Enter the line number at which the display is to start.

Insert/After

Enter the number of lines to be inserted after the entered line number.

Delete/From

Enter the number of lines to be deleted starting from the entered line number.

Press **Enter**, the details are written to the text
file.

Returns And Adjustments

1... **2...** 4/STPMP

This procedure provides a facility to record returns, adjustments, or scrap against a given receipt. A rejection note may be requested to be printed, including any appropriate text. The necessary data is created for future matching to a credit note. Debit notes may be produced for printing via the Print Debit Notes procedure.

Returns/Scrap/Adjustment Entry Screen 1

This screen is displayed when you select the Returns And Adjustment option. It enables the selection of the Goods Receipt Note (GRN) to be processed.

You can determine the specification of:

- Whether replacements are required for the goods, from this supplier.
- Whether a Rejection Note is to be printed or not, after details have been entered.

```
PM024          ST - JBA System Test Company      User GBJBARW2  27/10/95

Rejection note required.. _ (0=No,1=Yes)

F3=Exit

05-13  SR  MW  KS  IM  II  KENB20A  PET178S2
```

Fields:

GRN Number

Enter the GRN number associated with the receipt against which the return is to be recorded.

Replacement Required

Enter 1 to add return quantities to the outstanding balance on the original order.
Enter 0 otherwise.

Date

Enter the date of this return/scrap/adjustment. It defaults to today's date.

Rejection Note required

Enter 1 to print a document to accompany returned goods to the supplier, after completing the detail screen. Enter 0 if not required.

Press **Enter**, the details screen is then displayed.

Returns/Scrap/Adjustment Entry Screen 2

This screen is displayed when you press **Enter** on the initial Returns And Adjustments screen and enables you to specify which lines on the GRN are to be processed.

For each such line the quantity returned/scrapped is entered, along with a Reason Code for scrapped items.

```

09-02  SF  MW  KS  IM  II  KENB20A  PET178S2
  
```

Fields:

GRN No, Date, Replacement Required

From Returns/Scrap/Adjustment Entry Screen 1.

Supplier, Original Receipt Date

From the original receipt transaction.

All lines on the GRN are displayed. If an item is held at multiple locations (i.e. inspection or store), then these are displayed on separate lines. You may return the whole of a line by entering a 1 against the line in the list. Alternatively, you may return part of a line by entering its line reference at the base of the screen, along with the following:

Ref

Computer-generated reference number, for this screen display only.

Product

The number and description of the style received.

Order No.

The number of the order is displayed.

Qty/UOM

Quantity received with unit of measure it was received in. (This is reduced as entries are made on this screen.)

Loc

Location

S - Stores

I - Inspection

G - Goods Inwards

Invoiced Value

Invoiced value, or order value if not yet invoiced.

0 - If order value.

1 - Yes. If invoiced.

Ref Qty

Enter the quantity returned/scrapped.

UOM

The unit in which the quantity is expressed. This defaults to the unit displayed if it is not entered.

Reason Code

The Reason Code which you wish to associate with this return. It must be a valid scrap Reason Code on the parameters file (SCRC parameter).

Mode of Transport

This is valid if World Trade is installed.

If the location of the item is S (Stores), and the Style Inventory Management application is installed, then the stock records are downdated accordingly.

The rejection note, if requested on Returns/Scrap/Adjustment Entry Screen 1, is available for printing on returning to the menu.

All updates are written to the transaction file immediately on pressing **Enter**.

A Rejection Note is optionally printed, depending on the selection on Returns/Scrap/Adjustment Entry Screen 1.

Details printed are:

Lines

Item, Return/Scrap Quantity and UOM, Return/Scrap value, Original Order Number and Line.

Tip: If the Style Warehousing application is installed and the item processed is in a store defined to Warehousing, then the return will not be processed and an error message will be

displayed at the foot of the screen, i.e. returns are not allowed for stock received into a Warehousing stockroom. The Warehousing application must be used to process this transaction.

Transfer Goods Location

5/STPMP

This procedure enables you to transfer goods from one location to another. Currently three locations are allowed: Goods Inwards, Inspection and Stores. The method of transfer is flexible in as much as single lines of a GRN may be moved or a complete GRN. When moving individual lines, the quantity to be moved is also entered to allow several movements of one delivery.

A report is generated to give an audit trail of all movements.

A Goods Location Transfer Report is automatically sent to the printer.

A reservations enquiry is available from transfer goods which highlights sales orders reserved against selected purchase orders. On receipt of goods into stores, either through order receipt and transfer into goods, background processing is initiated. This allocates any sales orders reserved against the purchase order and initiates picking, confirm despatch, and invoice creation for those designated as direct delivery.

Transfer Goods Location Screen 1

This screen is displayed when you select the Transfer Goods Location option and enables you to select the location from which goods are transferred and the location to which the goods are moved.

A GRN number and/or item must be specified. A prompt on valid items is available, using the standard Style Inventory Management search on the items description.

PM056	ST - JBA System Test Company	User GBJBARW2	27/10/95

Fields:

Move From

Enter the location that the goods were moved from.

- 1 - Goods Inwards.
- 2 - Inspection.
- 3 - Stores.

Move To

Enter the location the goods were moved to using the choices as above. Note that this must be different from the Move From location.

GRN Number

Enter a valid Goods Receipt Note (GRN) number to identify the goods which have been moved.

and / or Item

Enter a valid item to identify the goods which have been moved. Either a GRN or an item must be entered.

Date

Enter the date of the transfer. It defaults to today's date.

Press **Enter** to display Transfer Goods location
Screen 2.

- If GRN only is entered, then all current receipts which are at the From location for this GRN are displayed.
- If GRN and item are entered, then only current receipts for this item on this GRN which are at the From location are displayed.
- If item only is entered all current receipts for this item, across all GRNs, at this From location are displayed.

Transfer Goods Location Screen 2

This screen is displayed when you press **Enter** on Transfer Goods Location Screen 1 and a Product Code was entered without a specific GRN number.

Selected lines can be transferred, or partially transferred. If all references for the item are to be transferred, use **F8**.

07-02 **SA** MW KS IM II KENB20A PET178S2

Fields:

From Location, To location, Product

From Transfer Goods Location Screen 1.

The details shown for each receipt line are:

Ref

The application-generated reference number (for use on this screen only). This may be used to identify a line for partial transfer.

GRN No.

The GRN number of the receipt.

Order No.

The original purchase order number.

Date

Date of receipt.

Quantity/UOM

The quantity currently outstanding at this location, with the corresponding unit of measure.

Traceability Ref

Internal trace reference, entered at receipt time.

Expiry Date

The end of the shelf life for appropriate items.

Select

This field is untitled on screen. Against each line enter:

1 - To transfer the full quantity.

2 - To view or maintain text for the original order line, via the Standard Order Line Text screen.

The following may be entered at the base of the screen to perform a partial line transfer.

Ref

Enter the reference number of the line to be part transferred.

Quantity

Enter the quantity to be transferred.

UOM

The unit in which the above quantity is expressed. Where this is left blank, the unit as shown for the line will be assumed.

If the Style Inventory Management application is installed, any transfers to or from stores result in the appropriate stock updates.

A Goods Location Transfer Report is sent to the printer automatically. It contains the following details:

- Location From/To
- Date of Transfer
- Supplier
- GRN Number
- Item
- Quantity Transferred
- Unit of Measure
- Batch/Lot/Serial Number

Note: If the Warehousing application is installed and the location From is a stockroom defined to Warehousing, then the transfer will be prohibited with an error message to the effect that this transfer must be handled within the Warehousing application.

Note: If the location To is a stockroom defined to Warehousing, then an additional screen is displayed for entry of a packaging type code for each line transferred.

Transfer Goods Location Screen 3

This screen is displayed when you press **Enter** on Transfer Goods Location Screen 1 and a GRN number is entered (with or without an Item).

Use **F8=Transfer All** to transfer a whole GRN or select specific lines for partial transfer.

The order placement date.

Supplier

The Supplier Code and name for this order.

Phone

The supplier's telephone number.

Ref

The Supplier's Order reference or acknowledgement number for this order.

Purch Officer

The code and name of the Purchasing Officer responsible for this order.

Class

The description of the class of this order.

Delivery Instruction Set Code

This identifies the set of delivery instructions assigned to this order.

For each line (or each scheduled delivery for a schedule type order), the following details are displayed:

Line

The order Line Number.

Item

The stock item or the supplier's item reference for non-stock items.

Cost Code

The Cost Code for a non-stock order item, as entered on the order line. For a stocked item this is assigned from the items or item specification file.

Order

The original order quantity.

Recd

The quantity received to date.

Out's

The quantity outstanding, i.e. not yet received.

Inv'd

The quantity matched to date with invoices.

UOM

The code defining the unit of measure in which the above quantities are expressed.

Price

The price per UOM, in the suppliers currency, for this item.

Due Date

The date this line or schedule quantity is due to be received.

The first line of any Order Line text is also shown.

Use the Page Up /Page Down keys to scroll through all lines on the order.

The following details may be entered:

Order

A new order may be selected from this screen by overtyping the Order Number.

Supplier

From the Order Header.

Supplier Name/Order/Line

From Transfer Goods Location Screen 3.

Existing order line text details, created originally in Order Entry, will be displayed. You can enter up to 99 lines of order line text, each of up to 45 characters.

Position To

Enter the line number at which the display is to start.

Insert/After

Enter the number of lines to be deleted starting from the entered line number.

Press **Enter**, the Order line text details are written to the Text file.

Match Invoices To Receipts

6/STPMP

This option enables the on-line matching of receipts in Purchase Management with invoices on the Purchase Ledger Log. Where the Purchase Ledger Log is not in use, an Invoice Match - Stand Alone feature is provided. It is expected that the supplier's invoice will be used as a guide in this matching procedure.

The Invoices Matched Audit Report is printed if the Company Profile flag is set to request it.

Invoice Match Screen 1

This screen is displayed when you select the Invoice Match option and enables you to select the supplier to be processed, and a specific Advice Note (if known).

If no Advice Note is entered, the Unmatched Advice Notes screen is displayed for the selection of one or more advice notes.

The supplier's reference for the item.

Quantity/UOM

The quantity received expressed in the appropriate units of measure.

Gross Price/UOM

The gross purchase price of the item in purchase units of measure.

VAT

The VAT Code assigned to the order line.

Disc

The first order line discount.

Extra Disc

Up to three special discounts are shown. These are the two discounts entered for the whole order, and the second line discount.

Value

The total net value of the line. This is obtained by taking the price, applying the discounts, and extending the net price using the quantity.

Select

This field is untitled on screen. Against each line, you may enter:

- 1 - Match the line after amending details.
- 2 - Match the line with no amendments.
- 3 - Display the Order Line text screen.

If a line is selected for amendment, the following details may be overtyped at the foot of the screen:

- Quantity
- Gross Price
- Vat Code
- All discounts

Note: Where amendments are made which result in authorisation of a value greater than that specified on the order, this users authority will be checked.

For amended lines, the value of goods received into Inventory may be different to that posted to the Purchase Ledger. To compensate for this, a price variance is automatically written as part of the dissection on the Purchase Ledger Log.

Once all lines have been selected for matching, or the **F12** key is depressed when at least one line has been selected, the Invoice Match Completion screen is displayed.

Note: Matching against lines where the goods are not in the stores location may be prohibited with an appropriate error message displayed.

This is an option on the Company Profile.

Note: The Item/supplier price may be updated automatically if the price is changed by an amended match on this screen. Again this is an option on the Company Profile.

Invoice Match Supplier Text Window (Option 3)

This screen is displayed when you put a 3 against a line on the Invoice Match Details screen and enables you to display and optionally maintain order line text.

```

14-33 **SA** **MM** KS IM II KENB20A PET178S2

Fields:

Supplier

From the Order Header.

Supplier Name/Order/Line

From Invoice Match Screen 3.

Existing order line text details, created originally at order entry, are displayed. Up to 99 lines of order line text, each of up to 45 characters may be entered.

Position To

Enter the line number at which display is to start.

Insert/After

Enter the number of lines to be inserted after the entered line number.

Delete/From

Enter the number of lines to be deleted starting from the entered line number.

Press **Enter**, the Order Line Text details are written to the Text file.

Invoice Match Completion Screen

This screen is displayed when you select **F8=Complete Match** to complete the matching. It enables you to confirm as complete the matching against the current invoice. Alternatively, further advice note(s) may be selected for matching.

PM031	ST - JBA System Test Company	USER GBJBARW2	8/11/95 9:26:15
Invoice Match			
Supplier.. GS01	Advice note.. _____		
Name..... Premier Food and Drug Supplies			
Matched value..	360.00		
F7=Partial match F8=Complete match F11=Cancel this match			
05-63	SA	MA	KS IM II KENB20A PET178S2

Fields:

Supplier Number.

Name

From Invoice Match Detail Screen .

Matched Value

The running total, maintained by the application, of the value of goods selected for matching.

The following may be entered:

Advice Note

Enter a valid advice note in order to return to the Invoice Match Detail screen for this advice note, or process a further advice note. Any subsequent matched lines will be added to those already selected.

Alternatively, leave Advice Note blank and press **Enter** to return to the Unmatched Advice Notes screen to select further advice notes for matching.

Note: Partial match and complete match operate in a similar fashion in that both functions insist that the whole value of an invoice is accounted for, albeit only temporarily. The only difference between the two is the value with which the routine flags the Log invoice. As a result, partially and completely matched invoices may be requested separately on the Invoices Matched with Purchasing report in the Purchase Ledger.

Tip: Invoices may be selected for subsequent matching until they are transferred to the Purchase Ledger from the Log. However, only the value not already matched directly with receipts is available for further matching.

Functions:

F7

Select Partial Matching and display the Invoice/Credit select screen.

F8

Select Complete Matching and display the Invoice/Credit Select screen.

F11

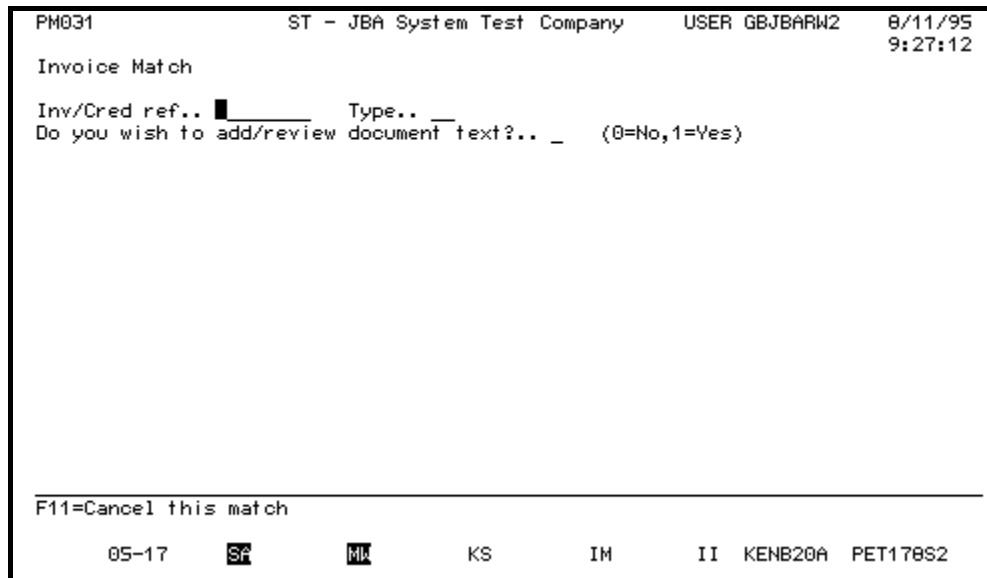

Cancel all selected lines and return to initial Select Screen.

F12

Return to Invoice Match Screen 3.

Invoice Match Credit / Selection Screen

This screen is used to specify the Invoice, Credit or Journal against which the selected lines are to be matched.

The screenshot shows a terminal-style interface for the 'Invoice Match' screen. At the top, it displays 'PM031', 'ST - JBA System Test Company', 'USER GBJBARW2', and the date/time '8/11/95 9:27:12'. The main title 'Invoice Match' is followed by input fields for 'Inv/Cred ref..' (with a cursor), 'Type..', and a confirmation prompt 'Do you wish to add/review document text?.. _ (0=No,1=Yes)'. A horizontal line separates the main area from the footer, which contains the instruction 'F11=Cancel this match' and a row of function keys: '05-17', 'SF', 'MK', 'KS', 'IM', 'II', 'KENB20A', and 'PET178S2'.

Fields:

Inv/Cred Ref

Enter the reference of the invoice, credit note, or journal to be matched, as entered on the log.

Type

You can enter either:

IN - Invoice

CR - Credit

JL - Journal

Do you wish to add/review document text?

0 - Leave blank, if not required.

1 - To maintain or view the Purchase Ledger Item text, (See Accounts Payable).

Tip: If the matched value agrees with the invoice/credit value, then the application returns to the initial select screen after updating advice notes and invoice records. Otherwise, the Difference Warning screen is displayed.

Invoice Match Difference Warning Screen

This screen highlights any difference between the goods value of the invoice and the total value matched against the invoice. If there is no difference, this screen is not displayed. Options are provided to complete, continue, or cancel this match.

The goods value of invoice, invoice number, total matched value and difference are displayed.

PM031	ST - JBA System Test Company	USER GBJBARW2	8/11/95
Invoice Match			9:28:15
Invoice Value Differs to Total Matched			
The goods value of invoice.. 00000786 is			
The total value matched against the invoice is..			
The difference between the two values is			
		2500.00	
		6610.00	
		4110.00-	
Press F8 if you wish to complete this match by accounting for the difference			
Press F12 if you wish to resume matching or cancel this match			
F12=Continue/Cancel F8=Complete this match			
01-02	SR	MM	KS IM II KENB20A PET178S2

The application will display Invoice Match Dissections Screen based on the function key selected.

Disc

The discount value on the Invoice.

Value Matched

The total value of received goods selected for match against the invoice.

Line Number

If you wish to amend a dissection already displayed on the screen, enter the line number here. The requested line will be displayed for amendment.

G/L Account

Enter the General Ledger account associated with the dissection.

Goods Amt

Goods Amount. Enter the value of goods to be posted to this account.

Description

Optionally enter a description for the dissection.

On selecting update, a check is made to ensure that the matched value plus the value entered on this screen equals the invoice goods value. If it does not, an error message is displayed and the difference must be resolved.

Once this is reconciled, the update will flag the invoice record on the Log as being either partially or completely matched, depending on your earlier selection. Dissections will also be written to the Purchase Ledger Log. These will be either generated automatically from the matching with receipts, or the dissection entered manually via this screen.

All matched advice note lines are updated accordingly.

Functions:**F8**

Update the dissections, invoice, and advice note records. Return to the initial select screen.

Invoice Match Stand Alone

7/STPMP

This procedure is used when the Purchase Ledger Log is not in use.

The significant difference is that the Invoice Log is not checked/updated for the specified invoice or credit note number.

Tip: Refer to Match Invoices To Receipts section, for further details.

Note: The Difference Warning and Dissections screens are not displayed as there is no Invoice Log to check against.

The Invoices Matched Audit Report is printed if the Company Profile Flag is set to request it.

Landed Costs

8/STPMP

This Procedure enables you to maintain the calculated landed cost figures for a selected style or GRN.

Landed Costs Selection Screen

Select the Landed Costs option from the menu.

This screen enables you to select the appropriate GRN or style number for Landed Cost Maintenance.

```
PM092                ST - JBA System Test Company    USER GBJBARW2    27/10/95
Landed Costs Maintenance                               13:18:04
GRN No..... ■_____
Or
Item.....?.. _____
Receipt Date.. _____

F3=Exit  F4=Prompt
05-17    SF      MW      KS      IM      II  KENB20A  PET178S2
```

The following data may be entered:

Fields:

GRN No

Enter a valid GRN number.

or

Item

Enter a valid style number or use a prompt (?) facility.

Receipt Date

Enter a valid date if you wish to only consider specific receipts. If left blank all receipts for the style or GRN will be displayed.

Press **Enter** to display the landed Costs Detail screen.

Landed Costs Detail Screen

This screen is displayed when you have made selections on the initial Landed Costs screen. It enables you to maintain the calculated Landed Costs for the selected purchase order (GRN).
