Chapter 5

Utilities

Utility Procedures

The Purchase Management application provides a number of utilities for database reorganisation and verification. The facilities offered within utilities are not required for the normal day to day operations of the application.

The utilities provide the following facilities:

- The copying of company data.
- The purging and reorganisation of the database.
- Item search rebuilding.

This section deals with these utility procedures.

Copy Company

1... **2...** 1/STPMU

This procedure enables a new company to be created quickly and easily. 'From' and 'to' companies are specified, along with an option to enable copying parameters and sundry codes only. Where the Inventory Management application is in use, both companies must exist in the Inventory Management application.

Select the Copy Company option from the Utilities menu.

```
PM150      Purchasing System Utilities Menu      User GBJBARW2  30/10/95
                                                    13:15:22

Copy Companies

From Company      _  ? to prompt
To Company        _

Sundry codes only? 1=Yes,0=No @

F3=Exit      F4=Prompt

09-41      SP      MK      KS      IM      II  KENB20A  PET170S2
```

Fields:

From Company

Enter the codes of the company you wish to copy from.

To Company

Enter the company you wish to create.

Tip: The From company must be a valid company, and the new company cannot be an existing one.

Sundry Codes Only

0 - If all details are to be copied.

1 - If you only want the Company Profile and parameters to be copied to the new company.

Clear Down Data Files

1... 2/STPMU

This option enables you to clear all data within the Purchase Management system. It may be used to clear test data at installation time prior to live running.

This function clears all data for all companies.

```
PM153          Purchase Management Utilities Menu    User GBJBARW2  13/12/96
                                                    8:33:42

Clear Data Files

WARNING:-

  This option will remove data from ALL Purchase Management files
  for ALL companies.

  The Parameter file will be initialised to contain a set of parameters
  for the OSL Demonstration Company DC .

  To continue with this option press ENTER
  To abort this option use F3

-----
F3=Exit  ENTER=Clear ALL Data Files

01-02  SF      MW      KS      IM      II  KENB20A  PET178S2
```

Press **Enter** to continue to clear all data files or
F3 to exit the screen without submitting the job.

If you choose to continue you will be prompted to
press **F8** to submit the job to clear the data.
Press **F3** to exit without submitting the job.

Cancelled Order Purge

1...
2...

3/STPMU

Press **F8** to submit the report to batch in the normal day to day running of Purchase Management. Orders can be cancelled for a variety of reasons and this option exists to enable cancelled order(s) to be purged for a particular company, so clearing these unwanted records.

Select the Cancelled Order Purge option from within Utilities.

```
PM805                Purge Cancelled Orders Utility      User GBJBARW2   30/10/95
                                                           13:15:54

Company Code  __  Enter required company code

Order Number  _____

Enter order number to be purged, or leave blank to purge all
cancelled orders for requested company

F3=Exit

05-22  SP  MW  KS  IM  II  KENB20A  PET178S2
```

Fields:

Company Code

Enter the Company Code of the company for which you require the cancelled orders to be removed. The company must be valid and exist in the Purchase Management application.

Order Number

You have the option of deleting all of the cancelled orders for a particular company or just a single order, by entering the order number. When deleting a single order, the application will check that the order exists and is cancelled. If the order number is left blank, then all cancelled orders will be purged for the company specified.

Order Clearance Select Parameters

1...
2...

4/STPMU

This procedure enables the purging of historical data from the Purchase Management database. It enables completed orders to be cleared from the database, so keeping files to a manageable size.

The definition of completed here is fully received and fully invoiced.

Select the Order Clearance option from utilities.

PM400	JPS/38 Utilities.	User GBJBARW2	30/10/95
Order Clearance - Select Parameters		13:16:15	
Any records matched before the entered date will be eligible for deletion.			
A specified number of transactions will be retained on file for each item/supplier if an entry is made to the 'retain' field.			
Enter Company Code:		█	
Enter Invoiced Matched Date:		_____	
Enter number of transactions to be retained per item/supplier:		_____	
F3=Exit		ENTER=Confirm Details	
10-36	SF	ML	KS IM II KENB20A PET178S2

Fields:

Company Code

Enter the Company Code, of the company for which you require the orders cleared. The company must exist in the Purchase Management application.

Invoiced Matched Date

Enter the invoiced matched date. Orders finally matched with an invoice, and therefore completed, after this date will be eligible for clearance in this procedure.

Number of Transactions to be retained Per Item/Supplier

A further option exists to enter the number of transactions to be retained per item/supplier. If this is left blank, then the procedure will delete all orders completed up to the aforementioned cut-off date. If, however, a number is entered here, then that number of transactions will be retained as a minimum for each item/supplier. This may leave a number of orders completed before the cut-off date not deleted. No orders completed after the cut-off date will be deleted.

Initialise Parameter File

5/STPMU

This option enables you to reset the data in the system. It is usually used at installation time to reset test data prior to live running.

Note: This option will clear all existing data held within Purchase Management and reset the data to OSL demonstration data.

```
PM155          Purchase Management Utilities Menu    User GBJBARW2  13/12/96
                                                    8:35:28

Initialise Parameter File

WARNING:-

  This option will initialise the Parameter File PMP12.

  All records currently held on this file will be overwritten and
  replaced by a set of parameters for the OSL Demonstration Company,
  Company Code DC .

  To continue with this option press ENTER

  To abort this option use F3

-----
F3=Exit    ENTER=Continue Initialisation

01-02    SF    MW    KS    IM    II  KENB20A  PET178S2
```

Press **Enter=Continue Installation** or **F3=Exit** to exit the screen without submitting the job.

If you choose to continue you will be prompted to press **F8=Submit** to submit the job . Press **F3=Exit** to exit without submitting the job.

Purchase Order Audit Purge

1... 6/STPMU **2...**

This option enables you to purge order header and line details that were not deleted at the time of the Order Amend Audit print. You can either purge all remaining orders and line details or select the range you wish to delete.

PM156	ST - Style Test & QA Company	User GJBABW1	4/06/97
			10:12:46
Purchase Order Audit Purge			
Select purchase order numbers:			
From.....	_____	(Blanks = beginning)	
To.....	_____	(Blanks = end)	
F3=Exit F8=Submit			
00-36	SA	MW	KS IM II EDN400A PET149S2

Fields:

From

Enter the purchase order number for the beginning of the range that you wish to purge. This field can be left blank for a total purge.

To

Enter the purchase order numbers for the end to the range that you wish to purge. This can be left blank for a total purge.

Functions:

F8

This function submits and processes the purge data. An audit report detailing the records deleted will be produced. Where no records are deleted, a report is still produced and will display the message 'no records deleted'.

Reconciliation Reports

10/STPMU

This function will provide an exception report for Item/Supplier profiles and Purchase Order details.

Select the Reconciliation Reports option from utilities.

Fields:

Enter Option

Select a reconciliation report for either:

1 - Item Supplier Profile Validation. This function will produce an exception report on the following conditions:

- No records for a company.
- No item specifications.
- No suppliers.
- Suppliers not active.
- Zero prices.

3 - Orders File Validation. This function validates Purchase Orders and produces an exception report on the following conditions:

- No item specification.
- No supplier found.
- Supplier not active.
- No purchase officer.
- No order header.
