Chapter 1

Maintenance

Introduction To Sales Analysis Maintenance

Sales Analysis draws on data contained in other Style systems, in addition to data defined within it.

From the Inventory Management system, Sales Analysis uses data from the Item Master file, and the Description file.

From Sales Order Processing Sales Analysis uses the Customer Master file.

The following data is set up within the Sales Analysis system:

- A company profile is maintained within Sales Analysis, which holds specific details about each company within an installation.
- For ageing purposes, a Calendar provides for conversion of dates to Sales periods.
- Budget information may be created and maintained, aided by spread profiles. The time period shown on the Sales Analysis enquiry may also be defined.

Company Profile

This procedure enables the maintenance of details of system parameters specific to a company. It is available from within Company Profile.

Company Profile Amendment Screen

The screen enables the maintenance of company-specific processing options. If you are maintaining an existing company then the current details will be displayed. For a new company, default values will be shown.

You can enter the following details:

Fields:

SOP System

- 1 - JBA.
- 2 - MAAPICS.
- 3 - OTHER.

This indicates the Sales Order Processing system to which Sales Analysis is interfaced. Normally this value will be 1 to indicate that the JBA Style system is used. In bespoke environments, there may be an interface to MAAPICS or a bespoke system.

SOP Company

The code used for the company in Sales Order Processing with which this Sales Analysis company is to interface.

Inventory System

- 1 - JBA.
- 2 - MAAPICS.
- 3 - OTHER.

This indicates which Inventory system is interfaced. Normally this will be 1 to indicate the JBA Style Inventory Management system will be used. In bespoke environments, there may be an interface to MAAPICS or a bespoke system.

Inventory Company

The Company Code of the company in Inventory Management with which this Sales Analysis company is to interface.

Current Year

The current year. This should be entered at system installation time, but will be maintained by Sales Analysis, during the last period-end run during the year.

Current Period

The Current Sales Period. This should be entered at system installation time but will be maintained by Sales Analysis Period-end update.

Current Week

The Current Week. This should be entered at system installation time, but will be maintained by Sales Analysis Week-end update.

Number Of Periods This Year

Enter 12 if your Sales Periods are calendar months or 13 if they are 4 week periods.

Number Of Weeks This Year

Enter either 52 or 53.

Lowest Level Of History

Enter either:

1 - Hold sales data at period level (reports will only show period and year-end update figures).

2 - Hold it at a weekly level (reports will show weekly figures).

Margin

Enter either:

1 - See margins expressed as a percentage of Sales Value, or

2 - See margins as a percentage of Cost Value.

When you press **Enter** the values on the screen will be written to the company profile.

Styles

1/STSAM

This option enables you to add and amend styles. The first Style Maintenance screen is displayed when this option is selected.

For further information see Style Inventory Management.

Customers

2/STSAM

This option enables you to add and amend Customers. When you select this option the first Customer Maintenance screen is displayed.

For further information see Style Inventory Management.

Descriptions

3/STSAM

This option enables you to add and amend Descriptions. When you select this option the first Descriptions File Maintenance screen is displayed.

For further information see Style Inventory Management.

Calendar

4/STSAM

The Sales Analysis Calendar translates a date into a sales year, period and week. In this way, sales are grouped into time periods which are independent of any financial or manufacturing calendars.

Maintain Calendar Selection Screen

Select Calendar.

Use this screen to select the year and period type for the calendar you want to change.

```
SA020          ST - JBA System Test Company    USER GBJBAMRX    7/11/95

F3=Exit F8=Update F12=Previous

08-14 SF MK KS IM II KENB20A PET178S2

Enter the following for each period:

Fields:

End Date

The calendar date on which the period ends. When you enter only the date on which the first period ends and press **Enter**, the system will generate the remaining end-dates. These may be accepted or overtyped.

Elapsed Days

The number of elapsed days. This data is not maintained by the system, and may be maintained by you for reference purposes.

Selling Days

The number of selling days in the period. This data is not maintained by the system, and may be maintained by you for reference purposes.

Press **F8=Update** to update the calendar with the entered details.

Note: A calendar must be specified which encompasses all dates which Sales Analysis is expected to encounter. If holding details at weekly level, a calendar must be created for both

period and week end-dates.

Sales Budget Formats

1... 5/STSAM **2...**

This procedure enables you to define the levels at which budgets may be held. Each budget is defined in terms of one customer attribute, one item attribute or both and a value to be budgeted. Within the Sales Analysis system, this definition is called a Format.

Budget Format Selection Screen

Select Budget Formats.

This screen enables you to select the budget format to be created or maintained.

Fields:

Save Specifications

Enter 1 to save the report specifications for use again. Enter 2 to delete the specification after the report has run this time.

Produce At End Of

Enter 1 against the time period when you want the report to be produced. This is then submitted when the appropriate period end update is run.

Submit Report Now

0 - To submit the report later.

1 - To submit the report now.

Press **Enter** to save the report and return to the Select Report screen.

Sales History Time Period Selection

10/STSAM

In order to determine the details shown on the enquiry display, at least one format must be created. This determines the data shown on the display in terms of time period and value. As many as 36 different enquiry formats may be created. For example, one format may specify the four columns to be:

- Current period.
- Current period -1.
- Current period - 2.
- Current year to date.

Another may specify:

- This year to date.
- Last year to date.
- This period.
- This period last year.

The values to be shown are also determined by the format, for example, one may show quantity, whilst another may show sales value.

Sales History Time Period Selection Screen

Select Sales History Time Period.

This screen enables you to select the time period format to be created or maintained.

Enter the format code of the format you wish to maintain, or enter a new code to create a format.

Press **Enter** to display the Sales History Time Period Format Definition screen.

Sales History Time Period Format Definition Screen

To display this screen select an enquiry format and press **Enter** on the Sales History Time Period Selection screen.

Time periods and values to be displayed on the enquiry may now be defined.

```

For each column on the enquiry you can define:

Fields:

Ago

This allows you to define the period lag (depending on period type) for values displayed in each column. If the period type is Period, then blank here would indicate current period, 01 would indicate one period ago, 02 would indicate two periods ago and so on.

Period Type

The type of period for which values will be displayed:

- 1 - Year.
- 2 - Moving annual.
- 3 - Week.
- 4 - Period.

Default Value

This defines the value you wish to see displayed as a default for this format. The value selected will be displayed in the four columns according to the rules defined above. The required value may be selected from the list.

The above fields define the output of the enquiry. For example, if you wish to see quantity displayed, and in the first column you wish to see quantity for the current period, then against Ago you would enter blank or space. In Period Type you would enter 4, and you would select Quantity as the default value.

Press **Enter** to write the information on the screen to the defined format.

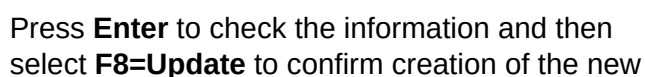

Create New Budget

11/STSAM

This procedure enables the creation of a new budget based on an old one using a percentage increase.

Creating budgets in this way provides you with an efficient way of incorporating the work invested in an old budget and taking this forward to the next year.

budget.
