Chapter 2

Updates And Processing

Introduction To Updates And Processing

This section covers those procedures concerned with the regular updates within Sales Analysis, including periodic updates which produce regular reports, and the updating of the Sales History Database.

Daily Update

1/STSAP

The Daily Update Function is used to select and print reports which have been specified for production at the end of the day.

The standard batch Processing Confirmation window is opened.

Press **F8** to submit the batch job which will select and print day-end reports, or **F3/F12** to exit without submitting the batch job.

Note: Any reports which have not actually been created, but have been specified, will be created at this time if they are specified as day-end reports.

Weekly Update

2/STSAP

The Weekly Update function is used to select and print reports which have been specified for production at the end of the week. The function also increments the week number held on the company profile.

The standard batch Processing Confirmation window is opened.

Press **F8** to submit the batch job which will select and print week-end reports, or **F3/F12** to exit without submitting the batch job.

The reports specified for week-end production will be printed, and the week number on the company profile will be incremented.

Period Update

3/STSAP

The Period-end Update function is used to select and print reports which have been specified for production at the end of the period.

The function also increments the period number on the Company Profile, and if the job is run at the end of the last period in the year, the period number is re-set to 1 and the year incremented.

The standard batch Processing Confirmation window is opened.

Press **F8** to submit the batch job which will select and print period-end reports, or **F3/F12** to exit without submitting the batch job.

The reports specified for period-end production will be generated and the period number on the company profile will be incremented, or re-set to 1 if the year is incremented.

Year End Update

4/STSAP

The Year-end Update function is used to select and print reports which have been specified for production at the end of the year.

The standard batch Processing Confirmation window is opened.

Press **F8** to submit the batch job which will select and print year-end reports, or F3/F12 to exit without submitting the batch job.

The reports specified for year-end production will be printed.

Note: Year-end update should be run before the last period-end as the period-end increments the year, and re-sets the period to 1 on the company profile.

Refresh Sales History

1...
2...

5/STSAP

The Sales History Refresh function gives you the ability to selectively change the analysis attributes within the Sales History Database in the event of them changing in Inventory Management or Sales Order Processing. For example, if sales regions are re-organised, the refresh may be used to allow analysis of sales as though the regions had always had their new arrangement.

You are prompted to enter a refresh from date, and are shown a list of the fields on the database which may be refreshed.

SA030	ST - JBA System Test Company	USER GBJBAMRX	7/11/95 9:42:40
Refresh Sales History			
Refresh from date		(Year and period)	
Refresh fields		(1=yes/0=no)	
Customer Class		0	
Region		0	
Salesman		0	
Area		0	
Depot		0	
Item Class		0	
Item Type		0	
Major Item Group		0	
Minor Item Group		0	
VAT Code		0	
F3=Exit F8=Update			
05-23	SA	MW	KS IM II KENB20A PET178S2

Fields:

Refresh From Date

Enter the year and period from which you wish to refresh sales history.

Refresh Fields

Select each field which you wish to refresh by entering a 1 against it in the list .

0 - The field will not be refreshed.

Press **F8** to submit the batch job to refresh Sales History.

Note: It is not possible to refresh details loaded from the invoice data.

This will check all data from the time specified, and refresh the fields selected to their current values in Inventory Management and Sales Order Processing.

Sales History Update

6/STSAP

This procedure enables you to update the Sales History Database with sales information from invoices.

Calendar Maintenance Screen 1

You are presented with the standard Calendar Maintenance screen which enables you to ensure that the required calendar(s) exist.

SA020 ST - JBA System Test Company USER GJBAMRX 7/11/95
9:41:09

Calendar Maintenance

Year... 85 Type... 1 (1=period/2=week)

F3=Exit F8=Confirm update

05-10 SF MW KS IM II KENB20A PET178S2

Fields:

Year

Enter the year on which the update is to be based.

Type

Enter either a period or week to maintain.

1 - period

2 - Week

Enter the year and type and press **Enter** to display the appropriate calendar screen.

Functions:

F8

Confirm Update

Calendar Maintenance Screen 2

The periods and end-dates for the year are displayed. If there are no end-dates, they must be entered in order for the Sales History update to function correctly.

SA020		ST - JBA System Test Company		USER GBJBAMRX	7/11/95

12	311295	---	---		
F3=Exit F8=Update F12=Previous					
08-14		SP	MM	KS	IM II KENB20A PET178S2

Fields:

End Date

The date that the period ended.

Elapsed Days

The elapsed days of the selected period.

Selling Days

The selling days for the period selected.

Press **F8** to update, if period-end dates have been changed or added. This will return you to the previous screen, where you can press **F8** to submit the Sales History Update batch job.

Functions:

F8

Confirm Update.

The batch job updates the Sales History Database with the details from invoices in the Sales Order Processing & Invoicing application.

Note: This procedure may take some time to complete, depending on the volume of data to be processed.
