Chapter 4

Reports

Introduction To Reports

The Sales Analysis application is supplied with some standard reports for basic housekeeping, such as item listing. The analysis reports themselves, like the enquiry function, are user-defined. This section describes how those reports are defined and requested.

Sales Reports

1/STSAR

Within Sales Analysis all reports are user-defined in terms of sequence, selection and content. Thus two functions are provided to handle Sales Reports.

There is a maintenance function which enables you to define or modify a report, and optionally submit it for processing, and a simple select and submit function, which enables you to select and submit a report which has been previously defined.

In this way, the tasks of creating reports and running reports may be separated for security purposes.

The report generator produces its own programs, and therefore creating a new report takes longer than running an existing one, since the system has to compile your report specifications into executable code. This should be taken into account when creating a large number of new reports!

There is a data area within Style which is used to show where the reports go that you define using these options. The data area is called SAUSRLIB. Other data areas in OSLSAP3 include:

SABARCHARS - used in the enquiry for characters to be used in the Barchart, and

SABARCHCOL - used in the enquiry for colours to be used in the Barchart

Once reports have been created, however, they are available to run on request.

Maintain Report Specifications Selection Screen

This screen enables you to specify the database records to be included in the report, based on field values. The list of possible fields are displayed - the Paging keys are available to view more.

SA070	ST - JBA System Test Company	USER GBJBAMRX	7/11/95
Maintain Report Specifications - Selection			10:26:39
Report reference.....	MLR1

Enter the following details:

Fields:

No Records To Print

This should usually be left blank, but you may enter a number to limit the number of detail lines printed.

Field Name

For each field you may specify a value range for selection:

From

Enter a From value to print from, or leave blank for all. A prompt is available of valid values.

To

Enter a To value to print to or leave blank for all. A prompt is available of valid values.

This feature may be used to limit a report to a range of customers for example, or for a single geographical region.

Maintain Report Specifications Exit Screen

This screen enables you to specify which values are to be printed on the report, and when it is to be run.

```

```

Enter the following details:

Fields:

Save Specifications Or Delete After Next Print

Enter a 1 to save the report specifications for use again. Enter 2 to delete the specifications after the report has run this time.

Produce At End Of

Enter 1 against the time period when you want the report to be produced.

Or Ad-Hoc

If the report is not to be run at regular times but on request, enter a 1.

Submit Report Now

Enter a 1 to submit the report now, or leave as 0 if the report is to be requested later.

Format

This specifies the report content in terms of period data.

- 1 - The report will show This period and Year to date figures.
- 2 - The report will show This week and Period to Date figures.
- 3 - Two reports will be produced showing both the above detail levels.

Value Selection

Select up to four values for inclusion in the report by entering 1 to 4 against the values required.

Print Details

If you are not using budgets, enter a 1 against the relevant field to print actuals for this year, last year or both. If you are using budget values, variance and variance percentage values may be included by entering a 1 against them. At least one value must be chosen.

Press **Enter** to validate your entries.

Ranking Analysis Reports

2/STSAR

This procedure enables you to select and run the Ranking Analysis reports specified in the maintenance section.

Select Report Screen 1

This screen enables you to select the name of the report to be run.

Fields:

Report Reference

Enter the name of the report you wish to run. A report name must start with an alphabetic character, and be a maximum of eight characters long, and may contain numbers after the initial letter.

Tip: If you do not know the name of the report which you wish to run, enter a ? and press **F4** to prompt for a list of existing reports. Select the required report by entering a 1 against it.

Specify Report Screen 2

This procedure enables you to run the report using the batch facility.
The report reference and title is displayed.

Press **F8** to submit the report.

Item File Print

You can specify your own reports to produce summaries at several levels. A report can be created to run on a regular basis, perhaps week-end, or a report can be used once to answer a specific enquiry.

3/STSAR

This provides a listing of the items defined within Inventory Management, together with their attributes chosen for inclusion on the sales history database.

Customer File Print

You can specify your own reports to produce summaries at several levels. A report can be created to run on a regular basis, perhaps week-end, or a report can be used once to answer a specific enquiry.

1... **2...** 4/STSAR

This provides a listing of the customers defined within Inventory Management, together with their attributes chosen for inclusion on the sales history database.

Report Specification Print

You can specify your own reports to produce summaries at several levels. A report can be created to run on a regular basis, perhaps week-end, or a report can be used once to answer a specific enquiry.

1... **5/STSAR**
2...

This provides a listing of the specifications reports defined within Sales Analysis

Sales Totals By Period Report

You can specify your own reports to produce summaries at several levels. A report can be created to run on a regular basis, perhaps week-end, or a report can be used once to answer a specific enquiry.

1... **6/STSAR**
2...

This provides a listing of the sales totals held within the sales history database.
