## Chapter 3

### Maintain Library Lists

## Maintaining Library Lists

You set up library lists within the system by refereneing to a set of standard library list files supplied with the system. These library lists cater for all standard usages of the applications, but you can maintain them to allow for tailor-made modifications to your applications. Each application has its own set of library lists. You can set up library lists to cater for test or training environments where impact on the live data must be eliminated.

*Note: When you install a Standard Application product, the installation routines which are supplied with the product will automatically establish the product's required library lists.*

*Note: If you are using Application Manager to control a multi-language environment then see [Language Codes in the Tips and Techniques section](#).*

Select option 2 from the Application Manager Main Menu and press **Enter**.

## Maintain Library Lists Screen

Select option 2 from the Application Manager Main Menu and press **Enter** to display this screen.

Use this option to set up and maintain library lists.

```
XA150                               Application Manager                               System: STUDB30A
Maintain Library Lists

Application ID . . . . . _ _ _ _

Library list code to maintain . . . _ _

If the above library list is to be based on an existing library list,
then the based on library list code may be entered below. You may
optionally enter an alternative application.

Based on library list code. . . . _ _ _
from application . . . . . _ _ _ _

F3=Exit  F4=Browse  F12=Previous
```

### Fields:

#### Application ID

Enter the application ID. This will be automatically entered if you have previously selected an application.

#### Library list code to maintain

Enter the library list code to be maintained.

#### Based on library list code/from application

If a name is entered in this field, then the name of library list being maintained must be new to the system. If you are trying to add a new library list, the values held by the system for this based-on library list will be copied to the new library list, and the maintenance program entered allowing changes to be made (if required).

After making your selections press **Enter**, the Maintain Library Lists Screen 2 is displayed:

*Note: The libraries required to run Application Manager are not required in the library list. They are automatically included in the system portion of the library list. You can include up to 25 user libraries in a library list.*

## Maintain Library Lists Screen 2

Press **Enter** after making selections on the first Maintain Library Lists screen to display Maintain Library Lists Screen 2.

| XA150                                                     |         | Application Manager |         | System: STUDB30A |         |

| F3=Exit F5=Resequene F11=Delete F12=Previous              |         |                     |         |                  |         |

### Fields:

#### Code description

A description of this library list.

#### Seq. No./Library

Enter the libraries required, in the sequence required. If you need to enter more than a single library between two existing libraries, enter them one at a time, pressing **Enter** to re-sequence the library list between each entry.

### Functions:

#### F5

Resequene. Use this function to re-sequence the library list and renumber in steps of 10.

On completion of the amendment of the library list press **Enter**, then select **F3=Exit** to exit. You are prompted to save or abandon your changes.
