Chapter 4

Maintain Tasks

Maintaining Tasks

Each activity that can be carried out under the control of Application Manager is defined as being a task. This describes, for example, which program should be called to perform this activity, and whether it is a batch task (for example an order print) or an interactive task (for example entering an order).

Think of an application as a set of tasks, logically grouped together, for example, Purchase Management. To use an entire application, a user must be granted rights for all the tasks that comprise the application.

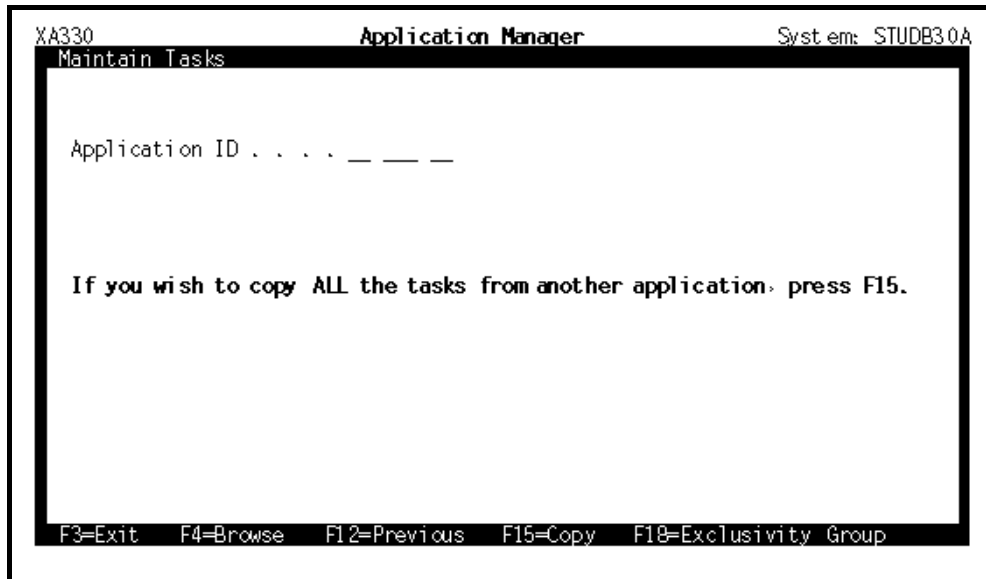

A single menu can feature tasks from across many applications and thus provide a seamless user environment.

Maintain Tasks Screen

 Select option 3 from the Application Manager Main Menu and press **Enter**.

Use this screen to create and maintain application-defined tasks.

Each application you install has its activities already defined. It is recommended that these application tasks are not changed or altered in any way. You may add bespoke tasks to these applications.

```
XA330                      Application Manager                      System: STUDB30A
Maintain Tasks

Application ID . . . . _ _ _

If you wish to copy ALL the tasks from another application, press F15.

F3=Exit  F4=Browse  F12=Previous  F15=Copy  F18=Exclusivity Group
```

Fields:

Application ID

Enter the application ID.

Functions:

F15

Copy. To copy all the tasks for an existing application release level to a new release level. This will duplicate all tasks to the new level.

F18

Exclusivity Group. Select this function to maintain exclusivity groups for application tasks.

 Press **Enter**. If you have selected an application Maintain Tasks Screen 2 is displayed.

Maintain Tasks Screen 2

Select an Application and press **Enter** on the first Maintain Tasks screen to display Maintain Tasks Screen 2.

This screen displays details of all tasks defined to the selected application.

XA330		Application Manager			Syst em: STUDB3.0A		
Maintain Tasks							
1=Select							
Opt	Task Code	Interactive Program	Batch Program	Job Name	Excl. Req'd	Excl. Return Group	Code
-	0010	PL005			SHR CO		
-	0020	PL010			SHR CO		
-	1010	PL015			SHR CO		
-	1020	PL025			SHR CO		
-	1030	PL150			SHR CO		
-	1040	PL007			SHR CO		
-	1050	PL008			SHR CO		
-	1060	PL006			SHR CO

							More...
F3=Exit F8=Add New Task F12=Previous							

Fields:

Opt

Selection field. Enter 1 alongsdie the task you want to maintain.

Select **F8=Add New Task**. Maintain Tasks Screen 3 is displayed:

Maintain Tasks Screen 3

Maintain Tasks Screen 3 is displayed when you select **F8=Add New Task** on Maintain Tasks Screen 2.

Use this screen to enter the details for the new task.

XA330 Application Manager		System: STUDB30A
Maintain Tasks		
Application	Task code	Action
IN	02 0010	*UPDATE STANDARD TASK
Type changes, press Enter		
Description	Maintain Company Profiles	
Interactive program to process request . . .	IN010	
Batch program to process request (if any) . .		
Job name (if batch program)		
Initial return code for option		
Exclusivity	☐ Exclusive Use of Company	
Exclusivity group		
Sub-task, Function List, Report Generator . .	(0=Task, 1=Sub, 2=IPG List, 3=Rep Gen)	
Recovery program		
Pre-processing program		
Library list	Blank for default	
Task Job Queue/Library	/	
Task Print Queue/Library	/	
Hold on Output Queue	0 (1=Yes 0=No)	
F3=Exit F4=Browse F11=Delete F12=Previous F19=Where used		
F20=Task exclusivity		

Fields:

Task code

If you are adding a new task, enter the unique task code. If you are amending an existing task the cursor will go immediately to the Description field.

The following numbering convention is recommended:

- Reserve numbers below 0099 for functions that do not require company validation at initialisation, for example company maintenance, print company profiles.
- Numbers 0100 to 8999 are for standard application tasks. Company validation is performed before initialising this task, if the Application Profile has a nominated validation program.
- Numbers 9000 to 9899 are for bespoke tasks.
- Numbers 9900 to 9999 are reserved for JBA Software Products Limited utilities.

Note: See the Company Validation Program section for more details about using company validation programs.

Description

Enter the description of the task. This is used in searches, so make sure it accurately reflects the job to be carried out and is spelled correctly.

Interactive program to process request

If there is to be interactive processing as part of this task, then enter the program name to call.

Batch program to process request

If there is to be batch processing as part of this task, then enter the program name to call.

Job name

If a batch job is to be submitted, enter the job name to be used to identify it.

Tip: Select **F10=Extras** to display the following additional parameters:

Initial return code

If a special return code is to be passed to the program, enter the initial value. The return code is contained in positions 118 to 119 of the Local Data Area in a field named L#RTCD. See the LDA-The Local Data Area section for more details about the Local Data Area.

Exclusivity

Blank - Share company.

C - Exclusive company use.

S - Exclusive system use.

1-9 - Share classes.

Use share classes to specify tasks that can and cannot run concurrently. For example, You have a task that extracts data from a number of files, and a number of maintenance programs for those files. When the extract program is active you do not want the maintenance programs to be active. To achieve this exclusivity, make the extract program share class 1, and the maintenance programs share class 2. All of the other tasks within the application could use a blank share class as they have no impact on the running of the extract program.

Note: This task is not processed unless the exclusivity requirements can be met. This is subject to the jobs currently active. Similarly, this task, once active, inhibits any subsequent tasks which break this exclusivity, until this task has completed.

Exclusivity group

If this task requires company or system exclusivity of other applications, then enter the group number assigned to the required set of applications. You can maintain exclusivity groups using **F15** from the Maintain Tasks Screen, see the Exclusivity Groups section.

Sub-task, Function List, Report Generator

A task may consist of several routines, or subtasks, not individually specified as a menu response. You can use subtasks to authorise users to parts of a task

rather than the whole task. Subtasks are linked to the parent task via programming. A menu activity cannot be a subtask.

Enter one of the following:

- 0 - This is the default and means it is not a subtask.
- 1 - It is a subtask.
- 2 - To initiate an IPG/400 function list.
- 3 - To run an IPG/400 report.
- 4 - This is a Ratioplan subtask. This enables the F10 Function key to enter more details.

Recovery program

Enter the name of the recovery routine to invoke if the user's last access of this task terminated abnormally.

Pre-processing program

If you require any processing before the initialisation of this task, then enter the name of the program to call.

Library list

Use this field to override the default library list for the application.

Note: When you install a Standard Application product, the installation routines automatically establish the product's required library list.

Note: The objects of the programs to be called must be present in the library list set up for the application.

Task Job Queue/Library

Nominate the job queue to which this task will be submitted.

Task Print Queue/Library

Specify the output queue to which printed output is sent for this task.

Hold On Output Queue

Specify whether printed output for this task is held.

Note: This job and output queue definitions are overridden if user level overrides exist. See Administration Functions for details of user overrides.

Functions:

F10

Ratioplan Subtask details. You can only use this function if you enter 4 in the Subtask field. This is only relevant for Ratioplan users.

F14

Maintain Application Task Details.

F19

Where Used. Shows which menus and the options within those menus that use this task.

F20

Task Exclusivity. The Maintain Task Exclusivity Window is displayed.

Press **Enter** to update the task.

Maintain Task Exclusivity Window

The Maintain Task Exclusivity window is displayed when you select **F20=Task Exclusivity** in Maintain Tasks Screen 3.

Use this screen to specify tasks that cannot be executed if this task is active and vice versa.

XA328		Application Manager		System: STUDB30A	
Maintain Task Exclusivity					
Application	Task	Description			
IN 02	0010	Maintain Company Profiles			
Exclusivity		Group			
C					
4=Delete					
Opt	Application	Task	Description	Exc	Grp
-	OE 02	0010	Company Profile Maintenance	C	
-	OE 02	1020	Conversational Order Entry		
F3=Exit F8=Add F12=Previous					

Fields

Opt

4 - Delete tasks.

Functions:

F8

Add exclusive tasks. Use this function to add tasks to the exclusivity list. You can use search facilities to find the required task.

Copy Application Tasks Screen (F15)

The Copy Application Tasks screen is displayed when you enter an application ID and select **F15=Copy** in the Maintain Tasks screen.

Use this screen to specify the details for the copy.

```
XA380                      Application Manager                      System: STUDB30A
Copy Application Tasks

Enter the application to be copied from :

Application . .  _
Environment . .  _
Release . . . .  _

Enter the application to be copied to :

Application . .  _
Environment . .  _
Release . . . .  _

REMEMBER : Any existing tasks for this application will be deleted

F3=Exit  F4=Browse
```

Fields:

Note: complete the following fields for both the new application (To:) and the application you are copying (From:).

Application

The two character application ID.

Environment

The environment code for the application.

Release

The release level/version of the application.

Note: Any existing tasks for this application are deleted.

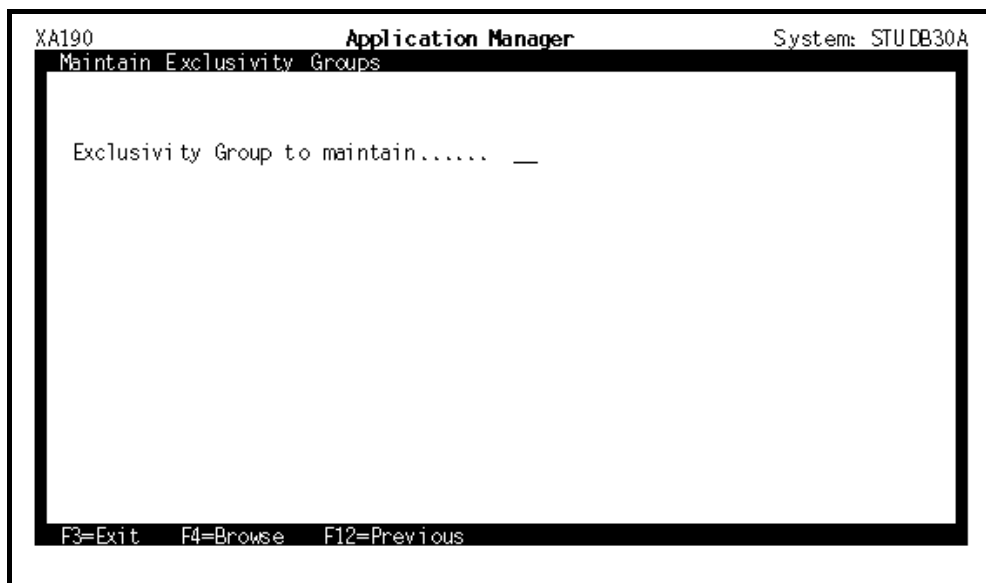

Press **Enter** to confirm your selections and enter **Y** to copy the tasks.

Maintain Exclusivity Groups Screen (F18)

 The Maintain Exclusivity Groups screen is displayed when you enter an application ID and select **F18=Exclusivity Group** in the Maintain Tasks screen.

Each application-defined task specifies the exclusivity requirements for the processing that it undertakes. Tasks can interface into other applications and therefore, require company or system-exclusivity of those applications. To establish the existence of interfaces between applications, you must set up the relevant applications as an exclusivity group.

For standard applications, these exclusivity groups are created at installation.

The screenshot shows a terminal window titled "Application Manager" with "XA190" on the left and "System: STUDB30A" on the right. The main title is "Maintain Exclusivity Groups". Below the title is a large rectangular area with the text "Exclusivity Group to maintain..... _". At the bottom of the screen, there is a status bar with the text "F3=Exit F4=Browse F12=Previous".

Fields:

Exclusivity group to maintain

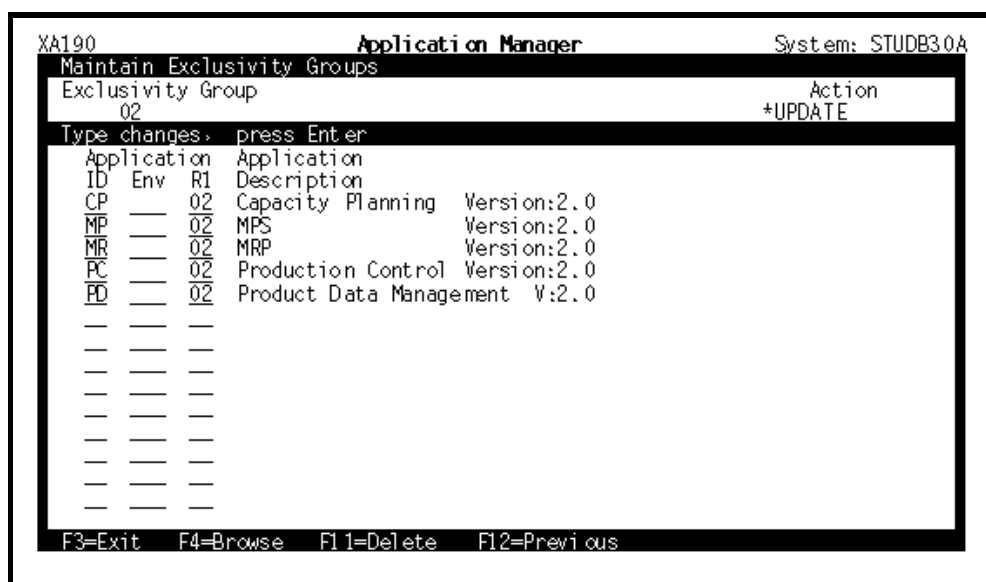

Enter the exclusivity group to maintain.

 Select an exclusivity group to display the Maintain Exclusivity Groups Screen 2.

Maintain Exclusivity Groups Screen 2

-  To display this screen, select an exclusivity group and press **Enter** on the Maintain Exclusivity Groups Screen 1.

For an existing group, the current list of interfacing applications is shown.

XA190 Application Manager System: STUDB3.0A				
Maintain Exclusivity Groups				
Exclusivity Group				Action
02				*UPDATE
Type changes. press Enter				
ID	Env	R1	Description	Version
CP	---	02	Capacity Planning	Version:2.0
MP	---	02	MPS	Version:2.0

---	---	---	---	---
---	---	---	---	---
---	---	---	---	---

F3=Exit F4=Browse F11=Delete F12=Previous

Fields:

Application

The two character application ID.

Environment

The environment code for the application.

Release

The release level or version of the application.

Description

The description of the application is displayed.

-  Press **Enter** to validate the applications to group. Select **F3=Exit** to leave and save your changes.

Note: You can have different companies interfacing, for example, you can link a single General Ledger company to many Accounts Receivable companies. You maintain this link using the Company Profiles within each application. For group exclusivity at company level, access these relationships to link the companies.
