Chapter 5

Explorer User Role Maintenance

What Is User Role Maintenance?

User Role Maintenance enables the System Administrator to:

- Maintain a list of users in the database.
- Maintain a list of authorised role menus for each user.

Access

You access User Role Maintenance from your JBA System 21 program list. You cannot gain access from within Explorer.

*Note: If you do not install User Role Maintenance then you will not be able to change the Explorer user. You will instead use the default *(asterisk) user.*

Tip: Look in Start\Programs\JBA System 21 and you should see User Role Maintenance. If not then install Administration Tools from the Explorer installation CD.

Files And Database

Note: Pathways to files and databases are set up using the System Configuration utility. Please refer to the help text called System Configuration.

The files containing all User Role information are held in an RMU directory. By default the location is:

c:\Program Files\JBASys21\version\RMU

where *version* is the name of your current application version.

When you first start up User Role Maintenance it attempts to open the last used runtime database. By default the location is:

c:\Program Files\JBASys21\version\Data\JBARTime.mdb

where *version* is the name of your current application version.

Tip: There is a Tutorial at the end of this chapter explaining how to create new Role Menus and a new User.

User Role Maintenance Menu Bar

Note: The User Role Maintenance Menu Bar is displayed with the User Role Maintenance Menu Window.

The User Role Maintenance Menu Bar has two drop down menu options:

- File Menu
- Help Menu.

File Menu

Menu options:

Save

Update the database with any changes you have made to any of the users.

Tip: After doing this you need to restart Explorer so that it recognises your new settings.

Exit

Close User Role Maintenance without saving any changes.

Help Menu

Menu options:

Role Maintenance Help

Displays help for this utility. You can navigate to all help for System 21 applications.

About

Displays System 21 version information.

User Role Maintenance Windows

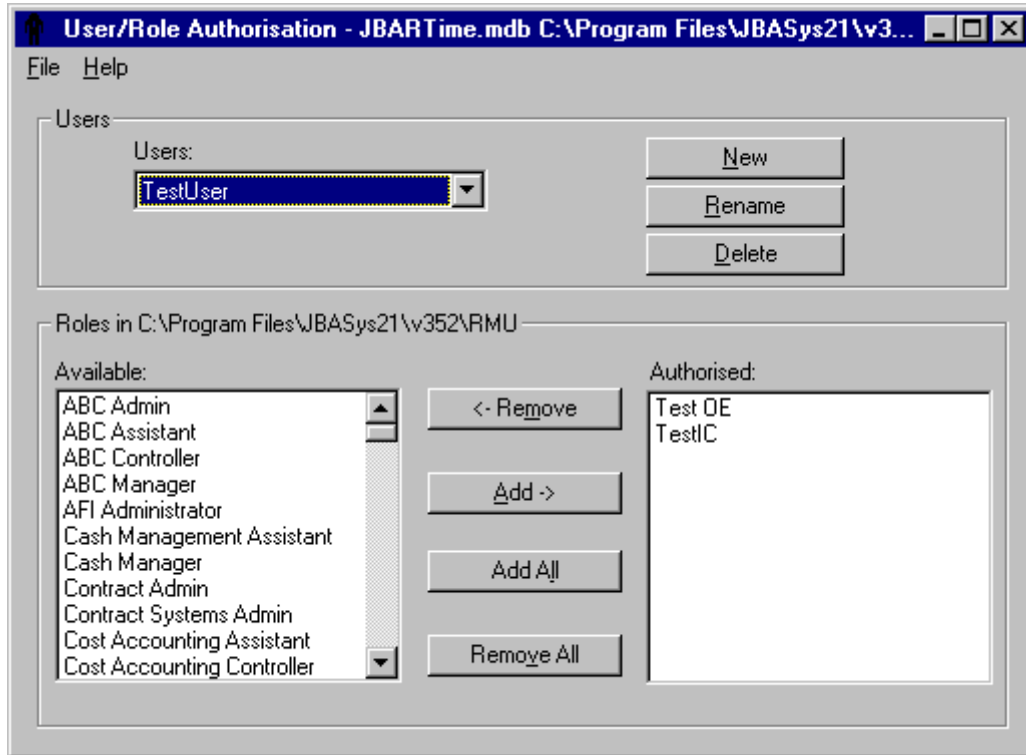

Note: The User Role Maintenance Menu Bar is displayed with the User Role Maintenance Menu Window.

The following windows sections give you detailed information about using the User Role Maintenance facility.

User Role Maintenance Menu Window

-  To display this window select User Role Maintenance from the JBA System 21 program list.

This window enables you to:

- Maintain a list of users in the database.
- Maintain a list of authorised role menus for each user.

Note: The User Role Maintenance Menu Bar is displayed with the User Role Maintenance Menu Window.

Warning: None of the changes made in the User Role Maintenance Menu Window become recognised by Explorer unless you select Save from the File Menu and then restart Explorer.

Users

This group box displays the Users field which you use together with the three buttons: New, Rename and Delete.

Fields:

Users

Select the user for which you want to maintain details. If there are no users displayed then use the New button to create a user.

Buttons:

New

Displays the Add New User Window for you to create a new user.

Rename

Displays the Rename User Window for you to rename the user which is currently displayed in the Users field. You enter the user's new name in the To field and click the Rename button.

Delete

You can delete the user which is currently displayed in the Users field. You are prompted to confirm the deletion. However, the user is not deleted from the database until you select Save from the File menu.

Roles In C:\Program Files\JBASys21\Rmu

This group box displays two list views: Available and Authorised, which you use together with the four buttons: Remove; Add; Add All and Remove All.

The views list all the role menus which are available or authorised to the user displayed in the Users field. The role menus in the Authorised list are the ones which Explorer uses.

You use the buttons to move role menus from one list to another. You can add a role menu to the authorised list or remove a role menu from it in order to unauthorise. Use the Add and Remove buttons to move one role menu at a time. Use the Add All and Remove All buttons to move all the role menus at once.

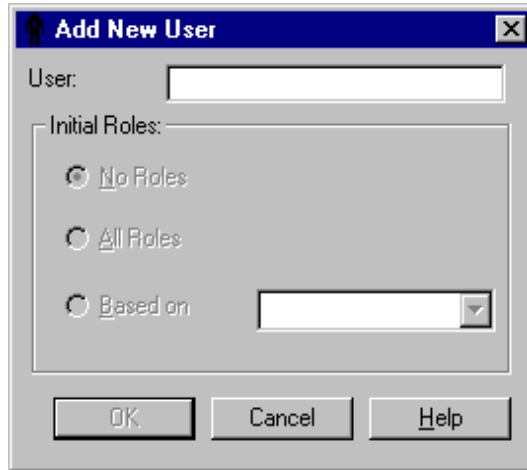

Note: A role menu cannot appear in both lists at the same time.

Tip: Remember to Save and then restart Explorer.

User Role Maintenance Add New User Window

 To display this window select the New button on the User Role Maintenance Menu Window.

The image shows a Windows-style dialog box titled "Add New User". It has a blue title bar with a close button (X) in the top right corner. The dialog contains a "User:" label followed by a text input field. Below this is a section labeled "Initial Roles:" containing three radio button options: "No Roles", "All Roles", and "Based on". The "Based on" option is followed by a dropdown menu. At the bottom of the dialog are three buttons: "OK", "Cancel", and "Help".

You can create a new user and give the user an initial set of role menus which you can then go on to amend.

Fields:

User

Enter the name for the new user.

Initial Role

This option button field gives you a choice of initial role menus:

No Roles - This is the default. When you return to the User Role Maintenance Menu Window the Available view has a complete list but the Authorised view is empty.

All Roles - When you return to the User Role Maintenance Menu Window the Available view is empty but the Authorised view has a complete list.

Based On - You choose a user on which to model your initial role menu list.

Buttons:

OK

Save the changes and close the window.

Cancel

Close the window without saving the changes.

User Role Maintenance Rename User Window

To display this window select the Rename button on the User Role Maintenance Menu Window.

The screenshot shows a standard Windows-style dialog box titled "Rename User". It features a blue title bar with a small user icon on the left and a close button (X) on the right. The main area of the dialog is light gray. It contains two text input fields. The first field is labeled "From:" and contains the text "TestUser". The second field is labeled "To:" and is currently empty. Below these fields are two buttons: "Rename" and "Exit".

You can rename the current user.

Fields:

From

Displays the current user.

To

Enter the new name for the current user.

Buttons:

Rename

Save the new name and close the window.

Exit

Close the window without saving the changes.

Tutorial

Warning: This is a tutorial for the System Administrator. You need to have special permissions set up to be able to complete this.

Aim Of Tutorial

This tutorial will show you how to create new Role Menus and a new User. This is so that when you go into Explorer all the activities that you personally need will be in one place and not hidden amongst those used by everyone else.

There are three stages:

1. Preparation.
2. Add New Role Menus.
3. Add New User.

Stage 1 Preparation

Step 1 Check Programs

Check you have all the programs installed.

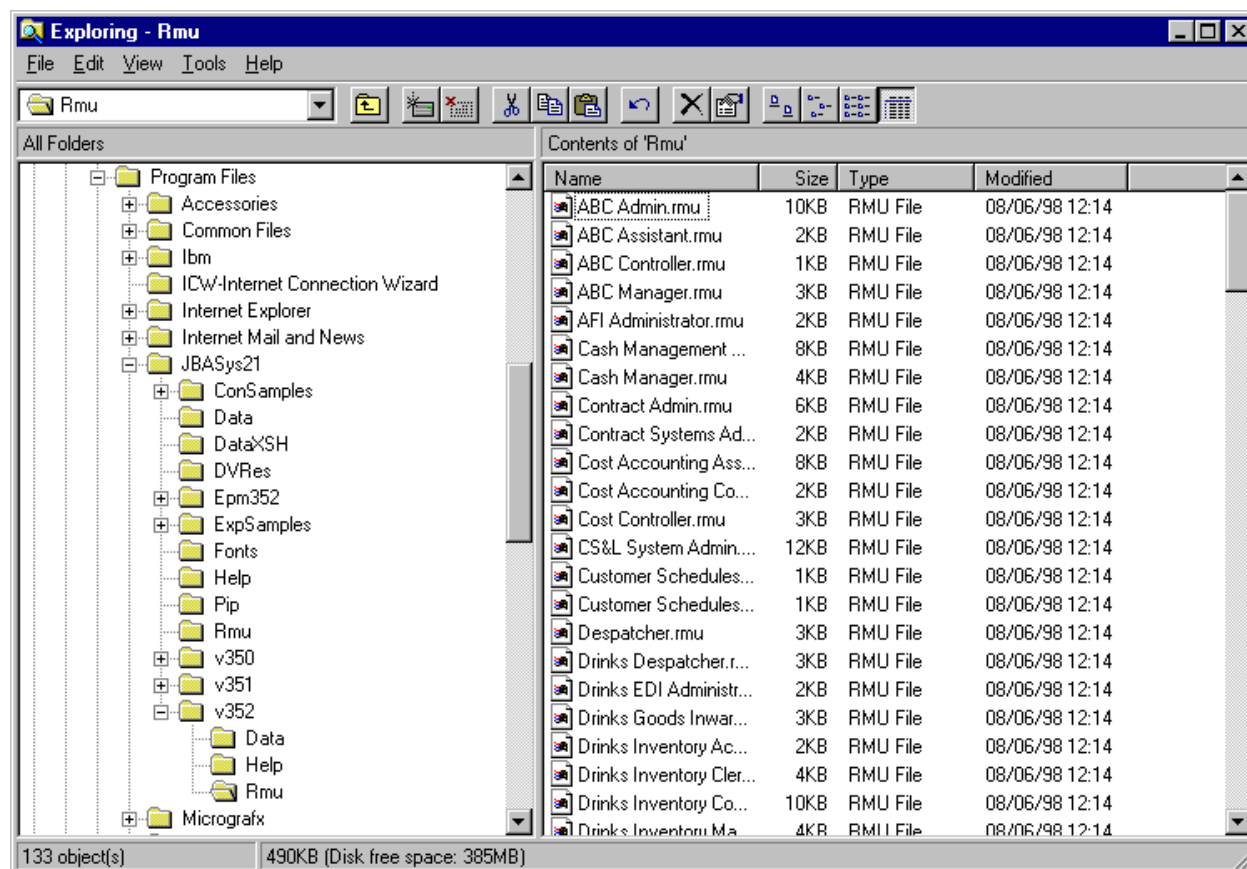

Look in Start\Programs\JBA System 21 and you should see System Configuration and User Role Maintenance.

You need both of these. If not then install Administration Tools from the Explorer installation CD.

Note that there are separate help sections for both of these from the Contents list.

Step 2 Check Role Menus

Role Menus are held as .RMU files. Have a look now at the ones you already have on your machine. You will be creating new ones. They will be stored in the correct version directory under Program Files\JBASys21. For example, if you have version 352 installed then your files will be under Program Files\JBASys21\V352\Rmu as shown below.

Step 3

Close Explorer and any other windows.

Stage 2 Add New Role Menus

Step 1 Launch System Configuration

You can do this in one of two ways:

- From the Start Menu select Programs\JBA System 21\System Configuration.
- From Explorer's Options Menu select Preferences and click the Configuration button.

Select the Settings panel and just check that Role Menu Designer and Enable All Role Menus User fields are both checked. If not then please check them.

Save these changes by selecting File\Save Ini.

Step 2 Launch User Role Maintenance

You do this only from the Start Menu. Select Programs\JBA System 21\User Role Maintenance.

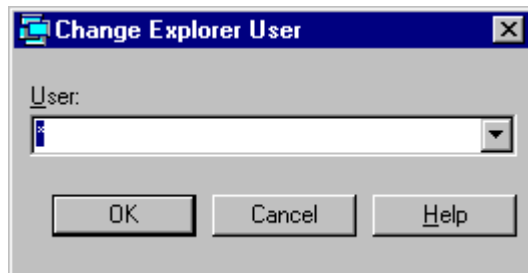

Step 3 Launch Explorer

Select Programs\JBA System 21\JBA System 21 Explorer.

Note that the Role Menu Designer field enables the Role Menu Designer button on the toolbar. Experiment with this button to see how it displays the Application Browser Area on the left side of the screen. You use this area to select applications when you create or amend your Role Menu.

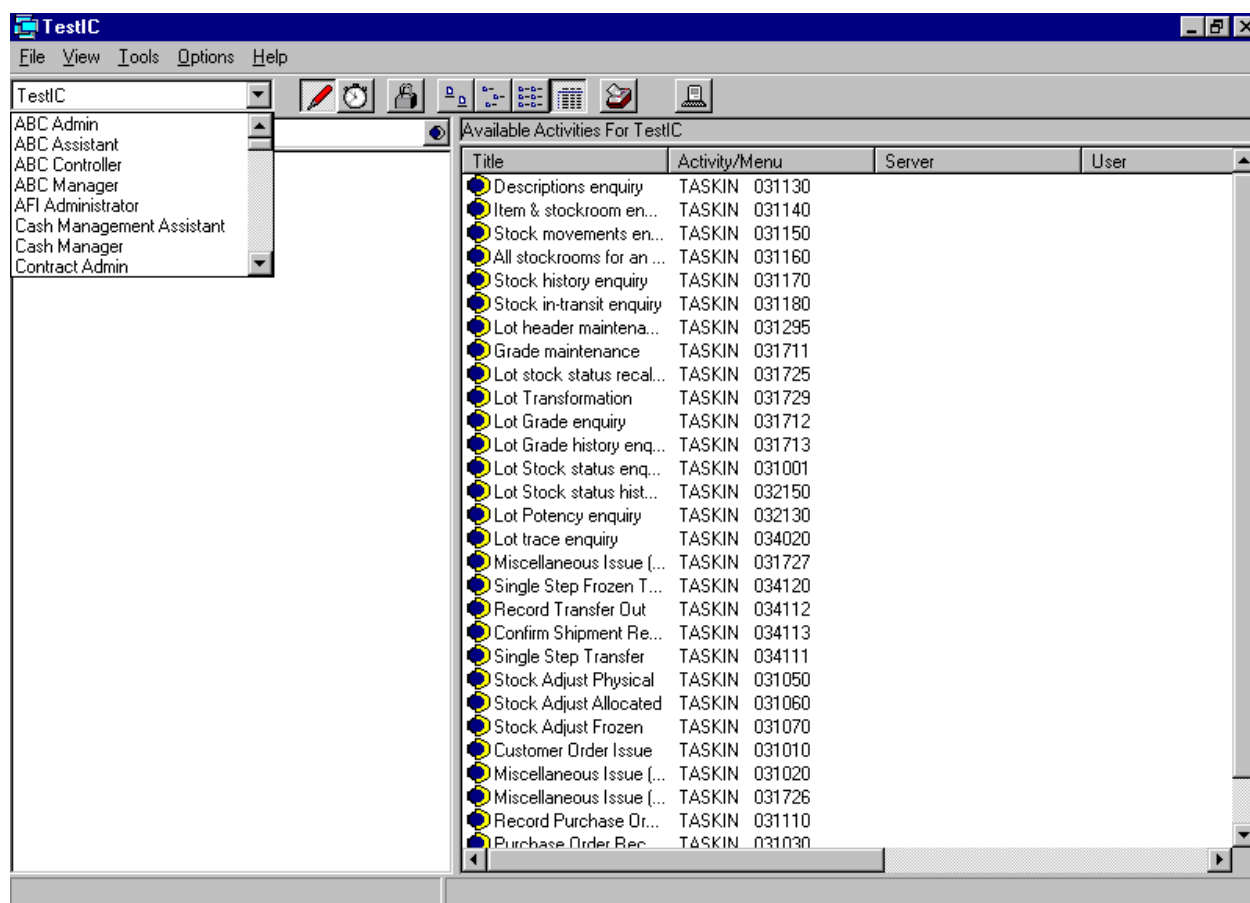

What you have now is a dummy user, called All Role Menus User, or *(Asterisk) for short. This * user has access to all the Role Menus. The Enable All Role Menus User field is the one that is enabling you, at the moment, to see the whole list of Role Menus.

Click the Change Explorer User button on the toolbar. This displays the Change Explorer User Window with the dummy user showing. You will be creating a user to add to this list.

Step 4 Create Your Own Roles In Explorer

Look at the drop down list box on the toolbar. This shows all the role menus available to the current user (still *). The activities which make up the currently selected Role Menu are in the Role Activity Area on the right side of the screen underneath the toolbar.

Select each Role Menu in turn and note which activities you are going to need. What you choose to do next depends on the number of activities you are interested in and how scattered they are through the Role Menus.

Tip: You might want to follow the example, as follows, and then delete anything you do not want at a later date.

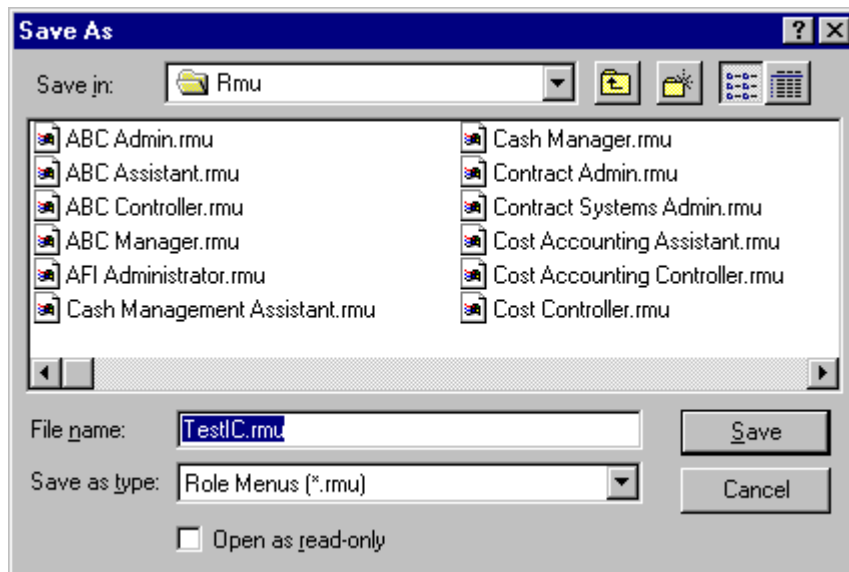

Step 5 Follow Example:

Let's say you have two Role Menus which contain the activities you are interested in (and other activities which you will eventually delete):

- Inventory Clerk
- Order Entry Clerk.

Select each one in turn and enter your new name for the role menu and select File\Save As. You could call them:

- Test OE.rmu
- Test IC.rmu.

You have now created two .RMU files. You could check this by using Windows Explorer to view the Rmu directory.

Step 6 Return To Explorer And Edit These Role Menus

There are two ways to edit:

- You can drag activities across from the left of the screen to the right to add new activities.
- You can right click on an activity on the right of the screen and select delete from the pop up menu to delete activities from you role menu.

Tip: Experiment by right clicking a) on an activity
b) on a space. This is all in the Explorer help
under the topic called Context Sensitive Pop Up
Menus.

Select File\Save to save any changes to role menus.

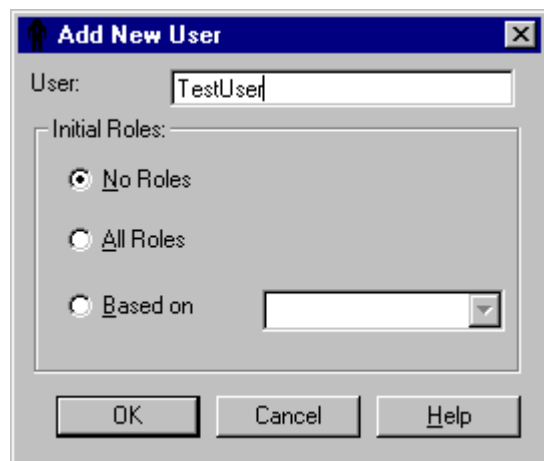

Tip: If you want to you can stop here and content
yourself with having new role menus in the
middle of the long list you started with (for user
*). However, it would be better if you continued
with Stage 3 and created a new user and
reduced the list to a display of just the roles you
have created.

Stage 3 Add New User

Step 1 Go Into User Role Maintenance

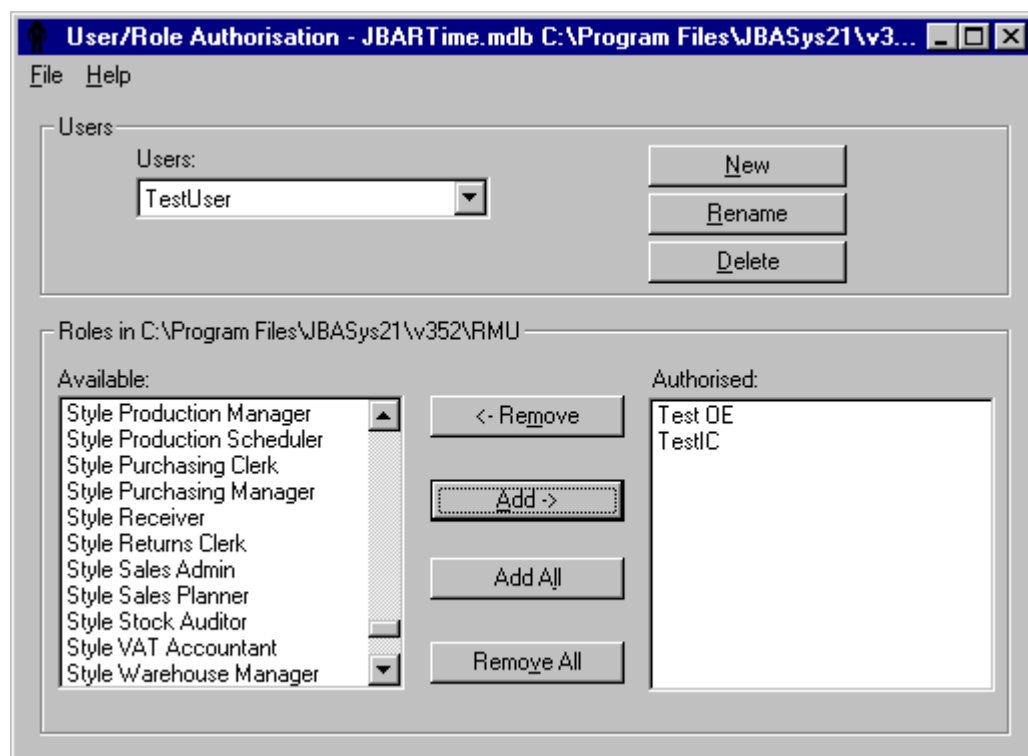

Select the New button.

Enter your new user name (TestUser) and select No Roles.

A dialog box titled "Add New User" with a close button (X) in the top right corner. It contains a "User:" label followed by a text box containing "TestUser". Below this is an "Initial Roles:" section with three radio button options: "No Roles" (which is selected), "All Roles", and "Based on" (which is followed by a dropdown menu). At the bottom are three buttons: "OK", "Cancel", and "Help".

Click OK to return to User Role Maintenance.

Select your new role menus from the Available list and add them to the Authorised list as follows:

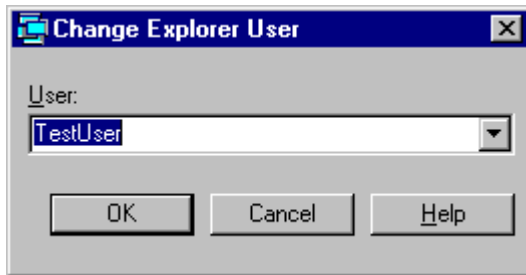

A window titled "User/Role Authorisation - JBARTime.mdb C:\Program Files\JBASys21\v3..." with a menu bar (File, Help). It has a "Users" section with a "Users:" label and a dropdown menu showing "TestUser", and buttons for "New", "Rename", and "Delete". Below is a "Roles in C:\Program Files\JBASys21\v352\RMU" section. It features an "Available:" list box containing roles like "Style Production Manager", "Style Production Scheduler", "Style Purchasing Clerk", "Style Purchasing Manager", "Style Receiver", "Style Returns Clerk", "Style Sales Admin", "Style Sales Planner", "Style Stock Auditor", "Style VAT Accountant", and "Style Warehouse Manager". Between the "Available" and "Authorised" lists are buttons: "< - Remove", "Add ->", "Add All", and "Remove All". The "Authorised:" list box contains "Test OE" and "TestIC".

Select File\Save.

Step 2 Return To Explorer

Select the Change Explorer User button.

Select your new user name in the list of users.

Click OK and this changes your current user from * to TestUser.

Now look at the contents of the drop down list of role menus on the toolbar. All you get in the list is your own Role Menus.

Step 3 Completion

Select File\Save and then File\Exit.

Tip: You do not have to do this but it would be a good idea to close down all your windows and then go back into Explorer and just check everything you have created.

Note: If you want to change the Role Menus at any time all you have to do is edit them as explained in this tutorial and remember to select File\Save.

End of tutorial.
