Glossary of Terms

Glossary

Grid Box

Tip: Click with the right mouse button under the toolbar to display the first row.

This is a table of information which you cannot edit. You can select a row of cells or a column of cells. You can click with the right mouse button to display a context-sensitive pop up menu. You can sort the table by each column.

Pointer

This is a black triangle on the left hand side of the display area. This tells you where you are on the database.

Before you can find any information relating to a particular database element you must position yourself at the correct row.

To get to the right position you can use the following:

- The scroll bars at the right hand side of the window.
- The Find Window which enables you to move your pointer to a new row in the database by finding any piece of text within the Description column of the database. To display this window select Find from the View Menu.
- The Position To Window which enables you to move your pointer to a new row in the database by searching for either: an Object - if you are viewing the Objects Window, or an Application Name - if you are viewing the Menu Options Window. To display this window select Position To from the View Menu.

Program

Technical Reference displays details for server application programs only and not VB programs. A program may also be referred to as a Task or an Activity.

Programs

Technical Reference displays details for server application programs only and not VB programs. Programs may also be referred to as Tasks or Activities.

Server

The Server is the main platform on which the Applications and Database reside - which transfers data to the Client.

System 21 Interface

JBA provide interfaces to their System 21 applications and to those applications that run under Microsoft Windows:

- System 21 Client Workspace
- System 21 Explorer
- System 21 Constructor.

Separate online help text is provided with each of these interfaces.

System 21 Interfaces

JBA provide interfaces to their System 21 applications and to those applications that run under Microsoft Windows:

- System 21 Client Workspace
