Chapter 4

Installing System 21 Application Support

What Is Application Support?

JBA System 21 Explorer now enables you to keep multiple versions of support files, databases and RMU files on your machine. Each of these versions has its own directory under C:\Program Files\JBASys21\. For example, the files to support Explorer version 352 would be in a directory called V352. The installation process described here creates these new directories for you and loads them with the relevant files.

Product Information

The software is available on CD-ROM.

No authorisation codes are required for this version of the software.

Application Support assumes that you have previously installed JBA System 21 Explorer.

Please refer to Software Requirements for Explorer.

Installing The Software

Warning: *Application Support assumes that you have previously installed JBA System 21 Explorer.*

Note: *Refer to the VerREADME.TXT file included on the installation CD for details.*

This is what to do:

Step 1

From the PC, make sure that Windows has been started.

Step 2

Run Setup.exe from the JBA installation directory to start the installation.

Warning: *Do not run Setup.exe from a DOS prompt.*

Tip: Online help and instructions are provided during the installation. It is most likely that you will use the displayed default settings and need only click on the Next button to progress through the installation. You can choose to scroll down the readme file.

Step 3 - Choose Destination Location Window

The installation software checks the default directory

c:\Program Files\JBASys21\

to make sure that you have already installed Explorer.

If the installation software finds a version of Explorer then it continues as explained at Step 4.

If the installation software does not find a version of Explorer then it displays the Choose Destination Location Window. Use this window to change the default directory.

Note: *If you decide to change the default directory, and Explorer still cannot be found, then you are asked if you want to continue installing Application Support. If you press yes then Application Support is installed into this directory and you continue with the installation and go on to Step 4. You must then install Explorer to the same directory! Application Support has to be in the same directory as Explorer before it can work.*

Step 4 - Select Components Window

You can choose to create directories to hold versions of application support files, for example:

- V350
- V351
- V352.

Tip: By default the boxes for the versions which you have not got are already checked for you.

Step 5 - Copying Files

Support files are copied into the new directories.

Step 6

Note that at the end of the installation the new versions of support files are shown in:

- Explorer - System Configuration File Paths Window in a drop down list box called Application Versions.
- jbasmg.ini - Explorer's System Configuration file, under the area labelled as being maintained by System Configuration.

Uninstalling The Software

Note: You need to do this before you reinstall or upgrade any part of JBA System 21 Application Support.

This is what to do:

Step 1

Click on Start\Settings\Control Panel and then click on the Add/Remove Programs icon. This is a standard Windows application.

All your currently installed software is listed for you.

Step 2

Select JBA System 21 Application and click the Add/Remove button and Application Support will be uninstalled for you.

Troubleshooting

If you have any problems or questions about JBA System 21 Interfaces then please refer to Tips And Techniques. This gives you:

- Troubleshooting help.
- Checklists.
- Detailed background information on various subjects such as the routers, the error codes, the configuration files shipped with the product.
- Useful suggestions for making further use of the product. For example how to carry out a trace.

Tips and Techniques refers to all these three interfaces, unless an individual interface is named specifically within the text:

- System 21 Client Workspace
- System 21 Explorer
- System 21 Constructor

Please refer to your JBA representative at JBA Product Support.
