Glossary Of Terms

Glossary Of Terms

Client

Usually a PC, an intelligent terminal which sends data to, and receives data from, the Server.

Clipping

Clipping is the term used to describe the way in which lines can be hidden from the screen display.

Host

Another term to describe the Server - the main platform on which the Database and Software Applications reside - which sends data to, and receives data from, the Client.

Monospaced Font

A Monospaced Font is a character set which uses single character spacing for all characters, regardless of their relative size. For example - the letters A, I and W could be regarded as average, narrow and wide in size - a monospaced font would give each of them the same amount of room on the screen.

Server

The Server is the main platform on which the Applications and Database resides and which transfers data to the Client.

SMU

An acronym for Soft Menu Utility.

Soft Menu

A term used to describe a menu that is software configurable; that is, not hard coded into the application.

Client Workspace

Client Workspace is the term used to describe the System 21 Graphical User Interface.

Workspace Designer

Workspace Designer is the software application which enables you to tailor the System 21 Screen display. This is documented in the Workspace Designer product guide.
